3497. P25 in Williamson County

Yahoo group: CenTexComm
Date: 2007-06-27 05:19:17 UTC
From: Robert
Topic: 3495 Message: 3497

OK so do we need to be monitoring BOTH control channels of the Williamson Co system? One on each bank? Let us know when the digital control starts spitting out active voice channels.

Dang, I knew it was coming, but I guess it is time to start saving up some money for a new scanner.

I had left trunker on the last couple of nights with all the weather events going on. I agree that one control channel is out of the loop along with a couple of voice channels.

So is the Digital control channel producing digital talk groups?
The analog control channel is on: 857.9625, 858.9625, 859.9625 and 860.9625
So the digital control channel is using 857.9625??

From: Glenn
Topic: 3501 Message: 3501

I have yet to go out and discover if there is any 220 mhz smr in the central texas area.
Has anyone tried to search out the 220 mhz band to see if there is any activity?
This idea spawned out of a advertisment in a magazine from a company called Cornerstone SMR.
Thanks,
Glenn

Don't know of any commercial 220 activity - that was once supposed to be
UPS new frontier, but I believe it pooped. Folks were running ACSB with
LTR format on a pilot tone, but it never caught on.

We do have a 902 repeater in Belton but no one uses it - far too few
radios. Take a look at D-Star - just put up a repeater (digital voice)
on 442.000 with internet gateway - really neat stuff - get a chance drop
by the Temple ARC meeting this coming Thursday - will have a program and
demonstration - everyone is welcomed.

3505. $1 Billion for Emergency Radios (More money for digital I guess to try and make everyone compatible, yeah right)

Yahoo group: CenTexComm
Date: 2007-07-18 21:52:45 UTC
From: Robert
Topic: 3505 Message: 3505

Dumping more money into paying for digital radios I guess. I would like to see DPS troopers switch and have radios and work off the Austin system. Fat chance.

$1 Billion for Emergency Radios
WASHINGTON ☐ The government announced Wednesday it will distribute nearly $1 billion to states and cities to fix communications problems that still plague police and fire departments six years after the Sept. 11 terror attacks. The biggest state recipients are California with $94 million, Texas with $65 million, and New York with $61 million.
In certain states, chunks will be specifically set aside for major cities: New York City will get $34.8 million and the Los Angeles/Long Beach area was awarded $22.3 million. Other cities getting specific amounts were: San Francisco Bay area, $14.5 million; Chicago, $16.2 million; Houston, $14.6 million; Jersey City-Newark, $17.5 million; and Washington, $11.9 million.
A total of $968 million for interoperable communications grants was announced Wednesday by the heads of the departments of Homeland Security and Commerce, after a review earlier this year found that of 75 major U.S. cities, only six received a top grade in emergency communications.
The money, said Commerce Secretary Carlos Gutierrez, will answer "the urgent need for firefighters, police, and other first responders to be able to communicate effectively with one another."
Homeland Security Secretary Michael Chertoff said the money should get the entire country up to a basic standard of effective emergency communication by 2009 ☐ but only if the local authorities coordinate with each other and avoid turf fights.
"That's not something the federal government can make people do," said Chertoff. "We can put the tools on the table, but the training and the willpower to use the tools has to rest with state and local officials."
Congress provided the money in a 2005 bill, seeking to address lingering radio problems exposed when hijacked airliners struck the World Trade Center in New York in 2001.
In that chaotic, fast-moving crisis, many firefighters could not hear important radio messages ☐ including orders to evacuate before the second World Trade Center tower collapsed. Police officers' radios generally worked better, but they had little effective communication with firefighters.
Such flaws were evident again in 2005 when Hurricane Katrina knocked out many local rescue workers' communications systems.
Since then, Chertoff and others have insisted that agencies need to end any so-called "battle of the badge" rivalries that historically exist between some departments, and, where needed, adopt new technology to handle a natural or man-made disaster.
"It's not necessarily the case that everybody's got to run out and buy new

equipment," said Chertoff.
Rep. Peter King, an occasional critic of Homeland Security's grant decisions, said that in this case "the department is moving in the right direction, but obviously New York still needs more."
In January, homeland security officials found that more than 60 percent of the communities studied had the ability to talk to each other during a crisis, but only one in five showed "seamless" use of equipment needed to also communicate with state and federal authorities.

From: Robert
Topic: 3506 Message: 3506

I still don't understand how DPS would communicate with APD

Group works to standardize radio systems

By: Regina Philip

Posted: 7/31/07

The Texas Radio Coalition met Monday to develop a strategic plan for statewide radio interoperability, which will make sure first responders across the state can communicate with each other.

The coalition is organizing a grant application for money, allocated by the federal government, to fund the project, said Pete Collins, the coalition's chair.

Currently, emergency medical service, police and fire departments within one city may not be able to communicate on the same radio channels as those in other cities. This would be problematic in the event of a natural disaster or a terrorist attack, when emergency personnel are sent from one city to assist another, said Texas Homeland Security Director Steve McCraw.

McCraw said the purpose of Monday's meeting was to develop a road map to take Texas to a higher-level plan for public safety. The lessons from the Sept. 11 attacks were part of the reason they set this plan in motion, he said.

"Currently, we have mutual-aid channels during a natural disaster," McCraw said. "But the problem is we do not have it on a day-to-day basis."

Mutual-aid channels are common radio channels all emergency personnel can use.

The radio commission wants cities to be able to communicate with each other using mutual-aid channels when they need help, without having to use multiple phones, he said.

"Here is an example. Let's say a person has four separate phones, one for parents, another for siblings and two others for friends," McCraw said. "Our plan is to integrate all of them and make it into one."

McCraw said Texas will receive $65 million in grants from the federal government to improve the radio system, but the commission is required to submit a plan and develop investment strategies.

With radio interoperability, the campus police department will be able to bring outside resources such as the Austin Police Department or the

Austin Fire Department if there is a disaster on campus, said Mike Weathersbee, inspector for the UT System Police. He said radio interoperability for the University will ensure faster response and better communication.

Funds will be allocated Nov. 1, and Gov. Rick Perry will decide how they will be prioritized, Weathersbee said.

"The engineers here are black belts in communication," McCraw said. "They are here to ensure an improved communication between departments."

Here in Bell County there are conventional base stations, P25 type that connect to different conventional interface ports on the EDACS switch and are routed to trunked talk groups. Just like taking a 2 meter ham repeater and connecting to a 10 Meter simplex channel, or in the old days when APD was on 460 there was a VHF 'Apron' channel for non-APD radios to cross patch - same thing only automated. 3509. 700 Mhz rebanding

Yahoo group: CenTexComm
Date: 2007-08-22 07:39:57 UTC
From: ultra_wide_band
Topic: 3509 Message: 3509

The FCC has tweaked the band plan for public safety in 700 Mhz. This affects the state license. Click on the link below to see the "before" plan in Figure 6 and the new plan in Figure 2.

http://fjallfoss.fcc.gov/edocs_public/openAttachment.do?link=FCC-07-132A1.pdf

That low power underground trunked system located somewhere near the capital grounds will need to move some channels. The current control channel is 764.46875 Mhz.

On a larger state-wide scale - this impacts the 700 MHz interop channels. See Figure 4 in this document.

http://tsiec.region49.org/TSIEC-MOU+TICP_9-8-06.pdf

I'm wondering when and how the state's region committees will handle this (perhaps they already have).

To my knowledge, there is no commercial scanner on the market capable of decoding D-Star, only P25.
They are not compatible.
Since D-Star is only used by amateur radio operators, the demand may be so low that it may not happen for awhile, if at all.

A very nice receiver, no doubt and something that would forever remain on my xmas wish list but I don't call it a scanner in the sense that we program in a bunch of conventional frequencies and trunk systems so we can listen to what is going on.
Love the frequency range 10 kHz to 3300 MHz. I'm not sure what interesting things there are to listen to above 1300 MHz though.
You are looking at more than $1000 for that with the D-STAR and P25 options. And it does not even have trunking capability.
Looks like a great companion to a spectrum analyzer but I wouldn't call it a scanner.
Would be difficult to carry around on your belt and listen to with an earphone too. :)
Now if they could incorporate a transmitter into it, that would really be cool!

3518. Austin Fire Dispatch

Yahoo group: CenTexComm
Date: 2007-09-03 14:25:58 UTC
From: skipper4798
Topic: 3518 Message: 3518

I have a new 396 that I am trying to learn to operate.

I also have many older scanners. I still receive the computerized AFD dispatch on UHF but cant find any other communication on AFD UHF. Have they moved all other to the digital only

I know all the dispatch is simulcast on both.

Also EMS still has full communications on UHF are they just transitioning slowly?

I really have a lot of problem obtaining enough signal strength on the new digital trunked to follow APD very well. I live North.

Is this pretty common. Thanks Joel joel@... WB5DGG

From: Robert
Topic: 3518 Message: 3519

All Public Safety (AFD and EMS) are on the digital system.
The handhelds they use are strictly 800 mhz digital.

EMS Control is a talkgroup that is simulcast on 462.975 which was left up for corporate first responders who still use UHF radios. (such as IBM) Other talkgroups that EMS uses such as Medcom West, Medcom North, Medcom South and Medcom Central are talkgroups that are not repeated on UHF.

Firenet is a talkgroup that is simulcast on 153.95.

TCEMS is a talkgroup that is simulcast on 155.715 since some departments are still on high band. Ironically I have noticed that if STARflight needs to get on either one of these frequenices, they are talking on the VHF side rather than the 800 Mhz side. You can tell by monitoring the VHF input.

AFD still has station "Locution" on 453.275 which is also simulcast on a talkgroup.
I am not sure if the BCD396T has a better antenna; but I recommend the Radio Shack 800 Mhz antenna (has orange print on the side) it has a BNC connector so you will also need an SMC to BNC adapter. If someone has a working 396T perhaps you can post a data file in the files section so everyone can use it.

Couple of updates/corrections.

The UHF system is simulacasted to EMS Control because we use it to carry tones to our UHF alert pagers that each unit still carries. This is
one of several methods that we have for alerting a unit when they are assigned an emergency call. None of the system 1st responders or anyone else uses the UHF EMS channel to talk back to us. We do have some other UHF resources available, but EMS Control isn't one of those. It's strictly paging/alerting.

TCEMS is used by STAR Flight to maintain contact with us when they are moving over to another 800mhz system that we can't monitor from CTECC. Since they only have one 800mhz radio in the aircraft, they use the VHF radio on TCEMS to flight follow and receive updates/requests from us.

Have a great weekend!

Adam Johnson
Communications Commander
Austin-Travis County EMS

I'll pass this along to a friend of mine at work. :-) I'm a
corporate first responder. He claims to own a "VHF/UHF radio" to
communicate directly with EMS. I have in vain tried to tell him:

1. He probably isn't authorized to use the frequency.
2. A/TCEMS uses the trunked system.
3. The UHF frequency is only for paging.
4. It makes a lot more sense to have the responding EMS unit call his
cell phone than talk over the radio.

But I cannot convince him of this. He's also claimed to talk to DPS
on it. I have no idea. "Hi guys! Catching any speeders tonight?"

All,

You might have received an email send "on behalf" of me from a service called Quechup. I did not send this out. I have been receiving these from other people all week and it appears they've gotten a hand on my addressbook.

If you get this email, immediately delete it. Don't click on it!

I apologize for it being sent out.

John

Interestingly I see them working the construction areas around the US-183/SH-183A/SH-45/RM-620 interchange mess near my house. I don't think I've ever heard them on the TRS and it looked to me like they had VHF whips, but I'm not 100% on that.

Where is this new medical center?

One of the local TV stations (sorry, not sure which one) had a piece on "Williamson County's new EMS helicopter". It was StatAir 2. They did finally say it was private and not taxpayer supported. It started out sounding like WCEMS had bought a chopper.

Scott & White University Medical Campus is on University Avenue (formerly FM 1431/Chandler Road), just east of I-35.

Both A/TCEMS and WCEMS are transporting patients there.

Like RADAR, except more accurate.
A LASER beam is aimed at your car, preferably the license plate (which is retroreflective - reflects back to the source). The beam is pulsed and the return trip is timed with dopler in mind and, poof, speeding ticket.

Mid Austin <mid@...> wrote:

Doppler Effect. :-)

It works the same as radar, except it's a laser. The advantage is
it's a narrow beam, easy ti pinpoint the vehicle and virtually
impossible to detect until it's too late.

So can we assume you'll get another one when you're 114? :-)

They should be switching to a P25 standard system, am I right. That means new talkgroups ID's should be in increments of 1 instead of 16 or 32. Also, somebody on RR.com said that they have taken several channels out of the rotation. So they should be able to turn on a 9600 control channel and run it simultaneously, moving channels around until everybody has radios operating on the 9600 system.

Is anyone hearing new DIGITAL talkgroups out of Williamson Co?

Are they showing up on the Austin System too?

So far, no.

> Are they showing up on the Austin System too?

Not that I've noticed, but I can't say "no" for certain.

I'm using radioreference to find the closest site to Round Rock (Travis county trunk).. I use the simulcast freqs and sometimes my Pro 96 loses the digital signal and i just hear the data. I'm close to I35 just north of SH45/Mopac... are there any closer repeaters?

3557. Mod for FT-1802

I just joined a local Volunteer Fire Department near Luling, TX and we were talking about ways to get paged out and communications. I brought up the fact that I was a licensed ham and had a transceiver that transmitted on 2 meters. The chief and I were wondering if there was a way to modify my radio to transmit on the Sheriffs' and Fire Tactical frequencies. Do ya'll know if it is possible and where I should look to have this done?

It can more than likely be done, however a ham transceiver is only FCC
accepted to transmit on ham frequencies. Modifying it would make its
use illegal as it would not be FCC accepted for use on the non-ham
frequencies.

From: Robert Barker
Topic: 3556 Message: 3559

For the Austin Travis Co system the control channel for Simulcast 1 is 866.2875 and for Simulcast 2 is 866.1375

So you can see if you are picking either one of those up stronger. You can actually put them both in the same back and the radio may find the stronger one depending on how your radio is set up. The closest one to SH45/Mopac is a Simulcast 1 tower located at the giant water treatment plant (big round UFO looking building) near MoPac and Merriltown.

For the intellirepeaters there isn't anything straight north on IH-35 but there is one off Honeycomb near Nameless Rd/FM 1431 (try 867.725) which may be heard in western Williamson Co a little Stronger.

The Burleson Manor on 868.225 may be stronger in eastern Williamson Co. But the intellirepeaters only carry limited radio traffic for the outlying units. I have picked up the Travis Co TRS on a handheld in a car from well into Bell Co and around San Marcos in Hay's Co so the problem may be a bad antenna that is not tuned for 800 MHz. Radio shack sells an excellent handheld antenna that has 800MHz printed on the side of it in orange.

It might be possible depending on the rig. I'm not sure of the legality of it, however.

You could go to a search engine & search for "FT-1802 mods" or something like that. Yu might be surprised what might come up.++++++++++++++++++++++++++ Spencer G. We saw this today at work:

Media contacts: Krista Umscheid, LCRA (512) 497-6009; or Gayle Wilhelm, Bastrop County Judge Ronnie McDonald’s Office (512) 332-7201

BASTROP – This morning, emergency responders from four counties began to converge at LCRA’s Lost Pines Power Park as their cell phones and pagers sounded the start of an all-day drill.

Billowing smoke, sirens, police tape, a mobile command post, and emergency responders and their vehicles are part of the drill taking place at LCRA’s Lost Pines Power Park in Bastrop County.

Emergency response teams from Bastrop, Travis, Williamson and Hays counties are participating in the annual exercise designed to simulate a disaster scenario that would require the regional Chemical, Biological, Radiological, Nuclear and Explosives (CBRNE) task forces to work together in a coordinated response.

“This specific drill is especially important to Bastrop County because it allows us to test our emergency management plan,” said County Judge Ronnie McDonald, who also serves as the emergency management director for Bastrop County. “This exercise provides a great opportunity for the entire region to practice how various agencies work together and bring their individual expertise to the table in the event of a real disaster.” McDonald, who has contributed to the region’s planning efforts for disaster preparedness and terrorism as former chairman of the Capital Area Council of Governments Executive Committee, also plans to participate in the drill.
The drill at Lost Pines Power Park, the site of Sim Gideon and Lost Pines 1 power plants, allows emergency responders to practice plans they created in response to a request from the Governor’s Division of Emergency Management in 2005 for the development of regional response plans for Texas. Those plans are designed to ensure a coordinated response and address specific technical issues pertaining to equipment, personnel and communications.

For response plan purposes, Texas has 24 regional councils of government (COG). The counties of Bastrop, Blanco, Burnet, Caldwell, Fayette, Hays, Lee, Llano, Travis and Williamson make up the Capital Area Council of Governments, or Capital State Planning Region 12. Because a major component of the drill is the deployment of all available resources in the region within the first few critical hours following a catastrophe, only those counties closest to Bastrop will send emergency response teams.
“We are very pleased to host the drill at our facility,” said Jane Luedecke, plant manager of LCRA’s Sim Gideon Power Plant. “Safety and

response are high priorities at any facility, but especially at power plants where the work environment calls for more emergency planning than a typical office building. We welcome additional opportunities to practice our emergency response plans.”

Agencies and organizations participating in the drill include a variety of regional emergency responders from the Bastrop County Office of Emergency Management, Bastrop Fire Department, Bastrop County Sheriff’s Office, Bastrop Federal Correctional Institution, Austin Fire Department Special Operations, Guardian Emergency Medical Services, LCRA, Hays County, Williamson County, Travis County, the American Red Cross and the National Weather Service.

WILLIAMSON COUNTY EMERGENCY SERVICES

County emergency departments switch from analog to digital radios

Officials say it will help expand communication and connect counties.

By Isadora Vail <mailto:ivail@...>
AMERICAN-STATESMAN STAFF
Thursday, November 15, 2007

CEDAR PARK - For nearly two years, Cedar Park Assistant Fire Chief James Mallinger has helped plan for the county to change the way emergency personnel and law enforcement communicate.

On Tuesday, Williamson County made the switch from an analog radio system to a digital one, far ahead of the deadline set by the Federal Communications Commission.

Davin Cox, left, of the Cedar Park Fire Department programmed the new digital radios that will help fire officials communicate with other area agencies, including those in Austin. Switching to a digital system met a federal requirement that analog devices be abandoned. (with patches they would have no trouble keeping what they had and patching into Austin anytime)

The new radio system, which relies on digital signals, allows users to connect over longer distances than they could before.

(I don't know where they are coming up with this hogwash - the range of the digital radios are only as good as the radios and repeaters themselves.. NO radio will transmit any further than analog and if they are in a hole and don't have a good signal it will drop out like a cell phone does)

"To everyone using the radios, this is going to be a huge change," said Mallinger, who helped Cedar Park and the county get funding to buy the equipment.

Officials said the biggest advantage will be the ability to connect most of the departments within the county with other counties. With digital radio, the distance at which two people can talk to each other expands, said Gary Oldham, director of the department of emergency communications for Williamson County.

For example, a Leander police officer will be able to speak to an officer in South Austin on the radio. Before the switch, that was difficult and sometimes impossible.

(so Leander is going from encrypted to unencrypted? Leander couldn't talk to anyone before because THEY choose to be encrypted)

All cities are mandated to switch by 2013, Oldham said. The FCC's mandate was developed shortly after the Sept. 11, 2001, terrorist attacks and requires that cities have the equipment to communicate regionally, FCC spokesman Robert Kenny said.

Oldham said Williamson County was able to switch early because grants became available.

The county received a $4.5 million federal grant through the City of Austin that helped purchase radio towers, radios, software and other equipment. The county contributed about $2 million.

Each new dispatch station could cost up to $40,000, and each hand-held radio, like those that police officers carry, can be $4,100, Oldham said.

Taylor (155.25) is the only city in Williamson County that will not be switching over this week. City Manager Frank Salvato said that is because it is one of the only cities that has its own dispatch center, which means it will have to purchase extra equipment. When Taylor will switch to digital radios is unknown.

(but Taylor could be patched to any system and they wouldn't need to do any conversion and every unit could talk to Taylor if they just got on the right talkgroup - Taylor is smart)

Other cities, such as Leander, have been able to purchase equipment through bonds this year.

(Leander bought encrypted radio that they will now prob just throw away or give to the dog catchers)

Don't expect much technical accuracy from a piece like this. The new system is a wide area network with ties to neighboring counties.

The LCRA has an analog network that covers more land area so you and I both know this isn't a digital vs. analog advantage. It's more of a new vs. old system comparison.

Be a better sports nut! Let your teams follow you with Yahoo Mobile. Try it now.

BlankIn my experience, digital almost always has a shorter (real world) ground to ground range due to propagation issues that limit the radio's ability to sync with the data stream as it gets in fringe areas where analog is still understandable.

I used to work as a field tech for Motorola C&E in the DC area. I well remember having to bite my tongue to avoid making liars of the sales reps and company brass when they hyped (lied) about the improvement the customer would get when going from 150 & 460 to 800. Never mind the difference between digital and analog. Newer is always better to the sales reps and company bank accounts. And since the hapless tax payers get to fund these "improvements", most localities are willing to try them out. Heck, they can blame the techs when the system doesn't perform as touted, right?

Last I knew Cecil Hamm former Harker Heights officer was Chief there - they coordinate with Milam County and the local Milam Constable. I set up a radio link between their city radio channel and mcso primary so that Milam traffic would be broadcast on the city channel and city traffic with the right ctcss tone would cross to milam so repeater.

From: Myles Barkman
Topic: 3568 Message: 3568

Someone emailed me about some possible new frequencies on the Boerne LCRA site.
He is hearing 936.225 and 936.4125 but doesn't know what the LCN are.
I see that 936.225 is licensed on the Kendall Co site near Bergheim (and is in RR as LCN 06) and that the Boerne site has 936.4125 licensed to it but does not show up on RR.
Does anyone know if 936.225 may have been moved to Boerne and what the LCNs of these channels are on whatever sites they are on?

I was out there this summer and I confirmed all the LCN's on Boerne, Kendall co, Kerrville, Doss, Luckenback and Fredericksburg. It seems that LCRA is starting to change and add a few sites lately. I'll see if I can capture some CC info this week.

4 weeks ago I found a new site near schulenberg that was not previously listed on radioreference.

3572. Re: [CenTexComm] new Boerne LCRA site freqs?

Yahoo group: CenTexComm
Date: 2007-11-20 05:04:34 UTC
From: Myles Barkman
Topic: 3568 Message: 3572

The guy in Boerne thinks he has the new LCN figured out.
Comparing to RR, you would change 07 to 936.4125 (the new frequency) and bump the others up one more.
So 08 would be 938.900
09 would be 939.4125.
He thinks 936.225 is coming from the Kendall Co site which is already listed as 06 in RR anyway.
He heard some activity just 30 minutes ago about the dispatcher telling units to switch to the Kendall Co site and he no longer heard activity on Boerne, not even the control channel. So someone is messing around with the system.

Myles

3573. trunk system

Yahoo group: CenTexComm
Date: 2007-11-29 03:43:58 UTC
From: jose esqueda
Topic: 3573 Message: 3573

I have some questions. Is Williamson Co. using the A/TC trunk system? So the talk IDs in the A/TC trunk system from Round Rock and so forth, I can program them in the A/TC trunk system? And the system(120Williamson County Simulcast855.21250855.71250858.98750860.96250*) is just a simulcast in Travis Co.?

Thank you for your time.

Those are just old Williamson County frequencies. I'm hearing some
activity, talkgroups in the 4000's.

3575. Williamson County, encryption, and the Statesman

Yahoo group: CenTexComm
Date: 2007-12-08 06:21:20 UTC
From: John Mayson
Topic: 3575 Message: 3575

I received an email earlier today from a reporter with the Statesman asking if I would like to give my input as to whether or not Williamson County should encrypt when they move to the digital system. It sounds like that's on the table. She's going to call me next week. In the meantime, HELP! :-) I couldn't convince a man dying of thirst to drink a glass of water, so I'll need some tips. So far I have...

1. The public can act as the eyes and ears of law enforcement. Examples? When I lived in Florida several prisoners walked off a work crew. I knew about it long before it hit the airwaves and I could've spotted them.
2. The public has the right to know what's going on in their community.

I need more input on this one. I am going to say I understand why certain sensitive operations should operate under encryption and propose only those be encrypted while routine traffic not be. This is how Austin/Travis County works.

I believe in a system of check and balance. The public needs to know. Look at the Drew Peterson case up in Bolingbrook. Cops covering up crimes. So why would the communications need to be covered up? You really cant say terrorist.

What is amazing to me is when the law enforcement wants the public's help in solving crimes they turn to the media with crime stoppers or used the media asking for the public's help.

They really need to justify any encryption plans. The people who live in Williamson County have helped pay for that radio equipment and have a right to hear what is happening in their Community.

Anyone that has been monitoring Public Service radio networks knows a lot about what is happening in their Community that is not reported by the News Media because it is not noteworthy as News.

I am not sure if the decision to encrypt Police Communications rest solely on the County Commissioners. Hopefully they will have a public meeting about it.

The News Media would be the biggest losers because they use scanners to help collect events for the news casts.

I would also think that the makers of these scanners would be lobbying the State Legislatures to it make it unlawful for scanner commutations to be blocked.

Lastly, FEMA has told the Public that they cannot serve everyone in a disaster and the Public needs to become more responsible for taking care of themselves during periods of disasters. The ability to monitor public service radio networks is very important during these times.

VERY few channels on our digital system will be encrypted. Only certain sensitive channels, such as for SWAT, Narcotics, HazMat hot zone, and a couple EOC talkgroups will be encrypted. The big exception is Leander PD; when they come over to 800 and they will continue to encrypt everything (a firmly entrenched philosophy of the chief there.). I'm a big believer in the public's right to know, and it seems that's true of most of our agencys as well. I so informed the Statesman last week in a brief interview.

A couple of years a photographer from the Statesman called me asking for help picking a scanner for the Austin/Travis County system. We've kept in touch off and on and he emailed me Friday afternoon saying Williamson County is probably going to encrypt.

I personally have no problem with sensitive talkgroups being encrypted. That's quite understandable. But not normal patrol talkgroups. Sounds like we're on the same page.

I don't feel any encryption by Police Departments is warranted. As long as I can remember SWAT, HAZMAT, Drugs, have never encountered any suffocated threat that required encryption.

The most that SWAT has done lately is to smoke out someone with a warrant or a drunk. Most police departments are using cell phones to communicate information and or having it sent to the laptops in the patrol cars.

3581. RE: [CenTexComm] Williamson County, encryption, and the Statesman

Yahoo group: CenTexComm
Date: 2007-12-09 21:40:30 UTC
From: Rick Parrish
Topic: 3575 Message: 3581

Hi John;

I want as much transparency as possible in all branches of government. Monitorable communications provide a window into the world of public safety. It's not just about providing an extra check against the occasional "bad cop". It's about knowing what issues the fine folks that work in public safety are currently dealing with in the field. Being able to hear what is going on gives us insight into ...

a. training and support
b. equipment issues
c. leadership

I don't expect to be able to hear everything. I don't need to.

I like to classify public safety communications into two categories - strategic and tactical. Most tactical communications don't belong on a trunked system. Their audience is usually concentrated to a specific team at a specific physical location. A SWAT incident, fire-ground command & control, or vice raid are examples.

Some tactical comms are appropriate candidates for encryption. Even without encryption, most tactical comms aren't monitorable because they are done at low power in the proximity of the incident. Unless you're next door - you won't hear a thing on your radio. If you ARE next door - you're probably already aware.

Contrast that to strategic communications. Ambert alerts are mass distributed because we've passed legislation to make it so. There are other equally important alerts that don't enjoy the same coverage. A BOLO is a classic example; very appropriate for wide-area coverage through a trunked radio system. Everyone can and should be aware when one of these is announced. A high-speed cross-town chase is a great example. Who wouldn't want to know? Is there one going on right now? Think I'll wait 30 minutes before going to the grocery store (one less vehicle in the way of the patrol car(s) in pursuit).

Most law enforcement vehicles already have a solid, secure encrypted channel of communication - their in-car mobile data computer.

I'm going to throw in one more argument - that most members of the press aren't going to like. In cities and towns where either full encryption or proprietary digital communications system was deployed - the public safety departments made a concession to the local press to provide them with radios that were programmed for a handful of channels. The news agencies purchase the radios at their own expense. A public safety radio is not cheap. It's also not a very good scanner.

This compromise stinks. It's a sell-out on the part of local press. They should be advocating for the rights of the citizens they serve instead of collaborating on additional barriers to news worthy information. I should not be forced to depend upon a handful of news departments to get a filtered view of what's going on in my community.

Here's the concept of rapid media. We have internet blogs and camera phones. We don't need to wait for "film at eleven". Someone can upload a video or still camera shot for all to see. We've become citizen-reporters. The IPN network is a great example. Volunteers report newsworthy items overheard on their scanners. You can subscribe via email or alpha page for a modest fee.

Getting back to the idea of the citizen-reporter - a $200 to $500 scanner makes an excellent tool - provided, of course, there's something to hear.

Never miss a thing. Make Yahoo your homepage.

3583. Williamson County, digital not necessary

Yahoo group: CenTexComm
Date: 2007-12-10 00:18:32 UTC
From: Robert Barker
Topic: 3583 Message: 3583

If anybody on the Williamson Co system wants to encrypt anything then they better line up a full team of PIO's that work 24/7/365 because the media (every TV station, every news radio station, magazines, Statesman, etc) will have you on speed dial and will be calling every time they get wind of a big call.
The public (we) is paying for this system and there has been far too much abuse in the past (Bastrop and the BBQ pits) That being said, I agree that some activities (gang unit, homicide) may need to be encrypted but not all the time. Just when they need to. It's very sad that Leander wants to be encrypted all the time and I wouldn't want to be a cop in Leander cuz they get little or no help from Cedar Park, cuz they can't even talk to each other. And if I were a Cedar Park officer, I wouldn't want to be blindly walking in a situation in Leander and not knowing what is going on, so most officers just hang back and let the dust settle before they go in.
Also, Taylor has refused to be part of the 800 Mhz analog so I'm not sure about the digital system. (can you say simulcast it on a talkgroup) The analog system was working just fine and they got all the bugs worked out so i just don't understand the need to go digital. I refuse to hear about how they need to vacate the other channels because none of that is true.
APD abandoned 460.225 (saying the FCC told them too) and the State of Texas took it to use for coordinating building maintenance. The Austin system still has problems. They still have a lot of cross bleeding of talkgroups that come up on the wrong talkgroups. Williamson Co it about start experiencing that. Also I think it's quite funny and quite a waste of repeaters to be broadcasting all over the county what should be done on direct frequencies. Like all the chatter at the Convention Center, and the airport, and all the prostitute and drug stings that are heard. None of that needs to be repeated all over the county but it is and it's really trying up the system. It won't be long before we hear 2 jail guards yacking away on their way home from work thinking they are on some back channel that no one is listening to and we get to hear everything, like those 2 school guards down in Hays Co that yack and yack all the time.

As a member of the media and avid listener of police scanners, I do not mind some special units being encrypted. Robert is right about us getting tips and calling half the world to confirm what is happenning around us. This might not be related, but the new digital trunk system in Laredo PD,FD and EMS are encrypted. I think that is crazy. But I could understand there area is very sensitive to information, because of drug dealers working in Mexico.

As for the Police department concerns, due to the cost of digital scanners listener ship will drop also. The average Joe that already has a scanner or who wants one is not going to be willing to fork out the $400-$500 or so to upgrade. I do services which takes me into peoples homes (oops, should I say that?) and I do notice an occasional scanner. 9 times out of 10 its an old one and a sub $100 type of radio.

Don't expect accurate quotes, either, especially on a technical subject. You're exactly right about the wide area attributes, and that was what I was referring to when speaking of wider area coverage, NOT digital vs. analog.

Well, there are many opinions on the subject, many if not most are valid.

There ARE bad guys who listen in. It's not the average citizen or scanner enthusiast that concerns public safety. It is the more sophisticated crook, the well financed drug dealer, yes, the posibility of a terrorist, etc. that worries them, and for good reasons. Lots of big time bad guys DO listen; I've been a police officer myself for a number of years and participated in raids of drug houses where along with the cash, dope, and guns, scanners abounded. There are countless other examples.

With the several hundreds of talk groups in our digital array, having a handful encrypted IS reasonable, in my view. Another poster commented about MDTs/MDCs, and that's a good point. Departments using them do much of their communications via that means, and nobody is listening to that traffic.

Things like the BBQ grills in Bastrop probably didn't have a lot of radio traffic - clear OR encrypted - making referene to those and similar activities. That argument falls pretty flat. Folks doing corrupt activities of any nature probably aren't chatting about it on the radio...

What you may not realize is that we've had a similar number or percentage of talkgroups encrypted all along on the analog system, and if you've been monitoring for a while, probably have heard next to no traffic on those channels, as they're only used when secure communications are critical, and that really isn't all that often.

As to going digital, you have to recognize that the FCC has MANDATED everyone go digital by 2013 for spectrum efficiency reasons. We were lucky enough to have an opportunity to participate in a grant that saved our local taxpayers a very substantial amount of money, and took advantage of that. We'd have had to do it by 2013 anyway, so why not do it now while saving local citizens a lot of money? I'm not a huge fan of digital, frankly - I don't like the voice quality, I don't like the on/off aspect, I think that can be a real issue for a public safety practitioner in the field not knowing if he/she is in a coverage area, etc., but it's yet another federally mandated change we all must make. Don't even get me started on rebanding....

Taylor PD hasn't stayed off the 800 system because they don't want to be there. It has simply been too expensive for them. They are aggressively looking for ways to come on board the digital system, and we absolutely welcome their joining, and look forward to that happening

in the near future.

Leander PD's Chief has long been entrenched in a philosophy of encrypting everything. That's his privilege and perogative and his right as Chief. I don't share that philosophy, but I'm not the guy charged with providing law enforcement services to the citizens of Leander, he is, and that's absolutely his call and not mine.

I'm not going to keep jumping in here, but wanted to clear up some significant misconceptions and share our philosophy on the radio network protocols.

I'm going to get my younger cousin a ham radio and a book for the tech license.. First off, is there a good book for kids to learn how to get their Tech license (he's 10y/o, but VERY bright)?
Also, he lives in round rock.. around O'connor and 620... does anyone know of any non-trunked/scrambled police/ems/fire channels I can put in the radio.. I got him a Ft-60, so he has 800mhz.. could someone come up with a few maybe.. or maybe you already have a current list you could send me? You can e-mail me at k5hdm@...

THANKS!
K5HDM

My son is 11 but has zero interest in radio. Oh well.

He lives near me. All I can think of is DPS. Williamson County is
solidly trunked. It looks like even Jollyville FD has moved over to
the TRS (although he's in the Sam Bass FD response area which has been
trunked for years).

Williamson and Austin/Travis County EMS still page out on UHF 462.975 MHz.

Wish him luck!

3592. a little off topic

Yahoo group: CenTexComm
Date: 2007-12-13 02:08:27 UTC
From: Ken Pehl
Topic: 3592 Message: 3592

This is a little off topic but hopefully acceptable. It's electronic and broadcast related.

Does KLRU still carry the PBS time signal (on a vertical sync sub signal) for synchronizing VCR /DVR recorders to the correct time?

And if so, further - does Time Warner Cable filter this signal out of their carriage of KLRU's signal?

Our DVR / VCR's don't sync the time anymore and at one time they used to. Not anymore. Both units works normally otherwise. I've written TWC but they don't respond to emails I've noted. And I hate to spend 15-20 min. on hold waiting to ask a live person - who likely wouldn't know since they are just customer service reps not tehnicially inclined engineers who aren't on the service lines.

Just wondering.

I would visit http://www.radioreference.com to find out. IIRC, the Arizona DPS, NM State Police, and TX DPS are still on VHF. I would imagine the large, rural counties in those states would still be using VHF also. The metro areas (Phoenix, Tucson, El Paso, etc.) are most like trunked.

3607. APD using "Highway" for traffic

Yahoo group: CenTexComm
Date: 2008-01-17 12:27:26 UTC
From: Robert Barker
Topic: 3607 Message: 3607

APD is starting to use the Highway Talkgroup for all incidents on the highways during morning and evening rush hour.
it would be nice if the wreckers could patch in and have directly radio contact to speed up their response.

Also heard a doctor at Dell Children's kinda getting into it with an EMS crew over their handling of a patient. Nothing major, just questioning a procedure they were doing. Somewhat interesting. The child was supposedly seizing and he asked well then who's crying in the background. He said oh that's the mother.

3612. Dwindling analog channels - Round Rock last "victim"

Yahoo group: CenTexComm
Date: 2008-01-26 21:47:27 UTC
From: Bruce Sawtelle
Topic: 3612 Message: 3612

Now with Round Rock dropping analog, I have a whole BUNCH of channels on my Pro-2005 without use. Still using it for all the ham repeaters and analog TV (with it going away next Feb).

So, if I bite the bullet, what channels can I get on the new Uniden/Radio/Shack/etc scanners. I remember someone saying encryption was not expected on many of the (Austin?) services. I'm on the boundary of Travis and Williamson.

I looked at the freq files posted here and they're a bit old, so if someone can post a new one with the services that would be available or maybe a summary list here in the messages on what's available and what's expected to be available (i.e. non encrypted), I'd appreciate it.

One last question, has any service transitioned to APCO-25 and are the scanners covering it?

Thanks
Bruce

Sorry for my ignorance, but is Air 1 the Austin PD helicopter?
That's what Fort Worth PD calls theirs.
Houston calls them "Fox" and identifies each one by the last 3 characters of the tail number (nine-five fox).

If so, how many are there and how do they differentiate them if there is more than one (air 2?)?

3628. Old Analog trunked Scanners

Yahoo group: CenTexComm
Date: 2008-02-15 06:17:33 UTC
From: d_s_chapman
Topic: 3628 Message: 3628

Now that Round Rock has converted, I (like many of you, I assume) have a couple of nice analog trunked scanners laying around. Has anyone in the group programmed a PRO-93/2053 for the LCRA EDACS system? Is that a very active system (monitoring from north end of RR). I never tried it - I had enough fun with the Williamson County stuff. I'm trying to get some use out of these scanners. Any suggestions or hints on those scanners for the LCRA system would eb appreciated.

Also, what's everyone's opinion on digital scanners. Looks like I'll need one. For me, it would be a handheld one. Anyone have an opinion - what are you actually using? The two that I see are the Radio Shack PRO-96 and the Uniden BCD396T. Any suggestions or comments?

Thanks - 73'S
Dave

Liberty Hill fire first big test of digital emergency radios

New system allowed emergency responders to communicate quickly, officials say.

By Michael R. Jeffers
AMERICAN-STATESMAN STAFF
Thursday, March 06, 2008

When a 1,500-acre wildfire threatened nearly 100 Liberty Hill homes in January, firefighters from Williamson and Travis counties coordinated their efforts quickly — and more efficiently than would have been possible months earlier.

It was the first big test of the new digital radio system in Williamson County after most fire and police departments upgraded in November.

With the exception of some software glitches in Round Rock and a couple of areas with poor reception near Florence, the transition has gone smoothly, said Gary Oldham, director of the department of emergency communications for Williamson County.

"The real proof of the pudding was the Liberty Hill wildfire," Oldham said. "Every fire department in Williamson County, except one, and five or six from Travis County, was called for that fire. Anyone that needed to talk to anyone else could."

The major advantage of the digital system is that it allows police and emergency workers from departments in different counties to communicate without having to go through a central dispatcher, Oldham said.

Operators using digital radio systems can choose which channels to monitor and with whom to communicate over a large area.

The new radios don't work everywhere in Williamson County, though.

Oldham said that areas north of Florence are not "absolutely dead," but there are some "geographically low spots in the Florence area."

They are small and isolated areas similar to dead spots in cell phone coverage.

In such cases, police or firefighters can bypass towers and talk to each other directly, Oldham said.

The county is doing more research to identify all of the areas with poor reception before officials invest in another radio tower, he said.

"It's a major investment, so when we want to add sites, we want to make sure it's in the best place possible," Oldham said. "Sometimes the best place is private property"

Every fire department in the county, except the one in Taylor, and most police departments have made the transition to digital radios.

Taylor Police Chief Jeff Straub said that city is working to get funding for the system for the police and the fire departments, and intends to join when it can.

Subscribing will cost the city $21,000 per year, he said.

Straub said the system would be more beneficial for the fire department, so it would get priority and more expensive equipment if Taylor switches.

"Fire guys get called to multiple response scenes all the time," Straub said.

"It's a little less useful for police, (but) when you've got a reckless driver coming from Hutto, it'd be nice to be able to make that call."

The Leander and Cedar Park fire departments switched to the digital system on Jan. 22, just before the Liberty Hill fire, said officials from both cities.

The police departments in both cities are in the process of making the switch.

3640. Dallas police, firefighters frustrated with automated dispatch system

Yahoo group: CenTexComm
Date: 2008-03-10 02:26:54 UTC
From: Robert Barker
Topic: 3640 Message: 3640

Austin experiecnes some of the same problems but they love their system. When a big fire occurs you will hear the automated system repeat the same call over and over again for days as new units such as investigators are assigned to the call.

Dallas police, firefighters frustrated with automated dispatch system

08:08 AM CDT on Sunday, March 9, 2008
By TANYA EISERER / The Dallas Morning News
teiserer@...

Dallas emergency workers say they're facing a new menace: their computers.

Many believe public safety is at risk because of numerous problems related to the installation of a sophisticated new emergency dispatch system. According to interviews and documents obtained by The Dallas Morning News:

? Firefighters have been sent to wrong addresses or dispatched to emergency scenes when other firefighters are closer.

? Emergency workers have been inadvertently notified that they don't have to go to an emergency call when help is needed.

? Police officers on patrol have received incorrect information on people's criminal records or outstanding arrest warrants.

? Correct information for police about whether a suspect is a wanted criminal sometimes arrives long after a person who was being questioned has been allowed to leave a scene.

"If someone hasn't died yet, then they will," said Jim Crump, a 24-year Dallas Fire-Rescue veteran. "It's a roulette wheel spinning. ... The people of Dallas have a right to know that their system is broke."

There are no known incidents of deaths or serious injuries related to the dispatch problems. But the nearly $6 million system that went online in August appears to be at the center of numerous difficulties.

Many of the new dispatch problems are related to the system's Achilles' heel: a patchwork software link between the city's older hardware, such as the computers in police cars, firetrucks and ambulances, to the newer dispatch system under City Hall.

Human error also may have increased as dispatchers, police and firefighters struggle with what they say is a cumbersome and often slow system.

City officials say they're working on fixes for many of the problems.

"We don't deny that there are issues, because there are," First Assistant City Manager Ryan Evans said. "But we are absolutely committed to addressing all of them."

Public safety concerns

Mr. Crump, the son of a retired Dallas firefighter and brother of a Dallas police officer, said he chose to talk publicly about the problems because of serious public safety concerns.

Documents show that firefighters have reported that the speakers at their stations ? which are supposed to let them know that they need to respond to an emergency ? sometimes do not work correctly with the new automated dispatch system.

Sometimes, the speakers at the wrong station go off, causing delayed responses to as many as 20 to 30 emergencies per day, according to fire department documents.

That's a major concern for firefighters such as Mr. Crump, who said what happened Feb. 25 at his station has become common: He says his station received two calls on the emergency-only red phone from someone at fire dispatch letting them know that they had been sent on emergency calls.

The phone calls were needed because the dispatch system had not notified firefighters of the emergencies through the fire station's loudspeakers. Precious minutes had been lost.

Neither call ended up being a serious problem, but Mr. Crump said it's the "what if" that scares him.

But Worris Levine, the city's director of communication and information services, said the dispatch system is not the source of that problem. He said the dispatch system is sending the information to the speaker system, but the speakers aren't activating. "We don't know what that is yet," he said.

He said he did not see it as a public safety concern because dispatchers can simply notify firefighters if they don't respond. "We're talking about seconds," he said.

Lingering problems

Although the city says it has teams of workers focused on the dispatch system, many of the problems have continued unabated since the city flipped the switch on the new computer-aided dispatch system at 4:15 a.m. Aug. 22.

The transition got off to a rough start, despite the statements in a City Hall news release soon after the rollout that there had been only a "few minor problems" that didn't affect public safety.

Some are seemingly mundane, with once-simple tasks on in-car computers now taking four or five steps to complete. Officers on patrol struggled to file reports, a problem that, early on, necessitated a massive effort to reprogram nearly every computer.

But writing reports on in-car computers remains "a very slow process," Officer David Baures wrote to police officials. "Is this going to be improved or are we stuck with this slow, inefficient 'new' computer?"

At various times, police have been reduced to writing reports by hand.

Other problems eat up untold man-hours, such as the frequent lag time between when a dispatcher assigns a police officer a call and when the information reaches in-car computers.

Finding out if someone is wanted by police, or driving a stolen car, has became tedious and time-consuming, whereas accessing such information had previously been nearly instantaneous.

Senior Cpl. Keith Huber, a member of the police special investigations unit, wrote to police officials in November that he had requested a records check through his in-car computer to see if a man had any outstanding arrest warrants. The computer initially said the man was not wanted. Minutes later, it notified him that the man actually had multiple outstanding warrants.

It was too late: Officers had let him go.

On Feb. 25, Senior Cpl. Christopher Wagner arrested a man after catching him with crack cocaine and a crack pipe. When he tried to check to see if the man had outstanding warrants, nothing came back telling him one way or another.

Once at the jail, he determined that the man was wanted for a parole violation for burglary.

"He's on parole until 2025," said Cpl. Wagner, who works on a crime response team in some of Dallas' toughest neighborhoods, including those in West Dallas.

"We were out there for 20 to 25 minutes talking to this guy, not knowing who this guy was," he said. "It's real dangerous. Parole violators are some of the most dangerous people we deal with because they don't want to go back to the penitentiary."

The current overall situation confronting officers is "unacceptable at all levels," Deputy Chief Nancy Kirkpatrick, commander of the communications division, said in an interview with The News. "On the major issues that officers have, there has not been a significant improvement."

City officials did not create a team to address the records-check issues until November. Mr. Levine said that many of the records-check problems would be fixed soon.

Mixing old and new

In addition to human error related to the sheer complexity of the new dispatch system, city documents blame some of the problems ? such as emergency vehicles being improperly dispatched ? on the way the new system links to older equipment.

When the city decided to replace its 35-year-old homegrown emergency dispatch system with the new automated one made by San Diego-based TriTech, a money-saving decision was made not to buy the mobile software system that allows the computers in emergency vehicles to easily communicate with the dispatch system at City Hall.

Instead of spending millions on new software and hardware for emergency workers, the city opted to build a bridge between old and new for about $640,000.

"It's always difficult; you're bringing in brand-new sophisticated software on top of something that wasn't built to be integrated with this kind of software," said Chris Maloney, president of TriTech. "You're trying to shoehorn it with this great new CAD [computer-aided dispatch] system that wasn't built to work with it."

Experts say building an interface between two software products as Dallas did is a bit like asking a person who speaks only Chinese to speak to a person who speaks only Italian. Someone has to translate, and often something gets lost in translation ? especially if the translator isn't very good at his job, as seems to be the case with the Dallas computer interface.

"Those pieces, your mobile piece and your [dispatch] software, are pretty much connected at the hip," said Joseph Hindman, a police technology expert who works for the Scottsdale, Ariz., Police Department. "They have to talk to each other."

Mr. Levine, Dallas' top information technology official, said that the interface is working as it should and that the city made the decision to keep the existing in-car software as an "interim decision" to minimize the amount of change for police officers and firefighters.

Dallas officials now are considering buying TriTech's mobile software. Records show that project could cost almost $10 million, including $3.7 million for the software and related expenses and about $5.8 million to replace 510 mobile computers.

Meanwhile, frustrated emergency workers are coping as best as they can. One police officer expressed his frustrations in a Feb. 28 police report: "The CAD system is twice as slow as the old system that it replaced. ... If the people who decided to buy the CAD system had to use it, we might not be having these problems."

GLITCHES IN THE DISPATCH

A sampling of problems related to the installation of Dallas' new emergency dispatch system:

? Emergency vehicles are assigned to calls, but then the call is rescinded by a "ghost clear" glitch as it is en route to the location, leaving the emergency call unanswered until the error is caught and someone is reassigned to the call.

? When officers try to check license plates or look for outstanding arrest warrants, the information is often slow to get to in-car computers.

? Location information for emergency vehicles is sometimes slow to update, causing the system to show emergency vehicles at one location when they're really elsewhere.

? The dispatch system shows that emergency vehicles have arrived at a scene when they have not. Or emergency vehicles arrive, but the system does not show it. Emergency workers say this distorts the reporting of accurate response times.

? Officers can no longer send out divisionwide or citywide messages ? such as be-on-the-lookout "BOLO" alerts. Such messages now go to police dispatchers who find them only by checking their e-mail, and then they are relayed.

? The in-car interface with the dispatch system is generally cumbersome. One top-ranking city technology official wrote in a memo how she saw an officer get 37 separate messages about a single emergency as he raced with lights on and sirens blaring to help another officer. "To read the comments, he would have had to use keystrokes and fine motor skills," wrote Lynn Chaffin. "Not Good. Not Safe."

http://www.commuterfeed.com/cities/AUS/

This doesn't seem all that active compared to other cities. I saw an accident this morning that's not on here.

This is pretty cool -- seems to be ported right out of the CAD system.
AND there's an RSS feed too.

http://www.ci.austin.tx.us/qact/default.cfm

Here's a snapshot from this morning.

Austin-Travis County Traffic Report Page

This page provides information on active traffic related incidents
reported to the Austin Police, Aviation Police, and Travis County
Sheriff. Information is updated every 5 minutes.

3643. Re: Williamson County

Yahoo group: CenTexComm
Date: 2008-03-20 05:29:39 UTC
From: Brent
Topic: 1606 Message: 3643

Hello,

I'm new to the group and have a couple questions about monitoring Williamson County.

When they first switched to the Travis County trunked system, I was able to monitor them just fine at my home location in South Austin.

IIRC, I heard them using the Site 101 Simulcast 1 frequencies.

Lately I have not been able to hear anything from them except a few rare transmissions from a RRPD admin talk group ID.

I noticed that there is now a Site 120 Williamson County Simulcast system, so I programmed that into the scanner thinking that might solve my problem, but still nothing is heard. It appears that I am probably out of range of Site 120, but I thought "simulcast" meant that the Wilco traffic would be "simultaneously broadcast" on the other sites as well. Is this not correct? Can the Wilco traffic only be heard within the range of Site 120?

Thanks,

Brent

Topic: 1606 Message: 3644

It is a simulcast of the towers throughout Williamson County, meaning that every tower in Williamson County is broadcasting the same frequencies, same talkgroups, same commands, everything in sync, so as to create a large radio "footprint" without using up tens or hundreds of frequencies. The only way that a radio will wander onto the TC 101 simulcast is if the signal is stronger from it than site 120. You may just be too far from site 120 to hear it. You might try an outdoor antenna such as an 800 MHz yagi tuned for 860 MHz, pointed at the general area of the Round Rock tower location, which is one of many towers in WIlliamson County comprising the simulcast site.

I'm new to trunking too. I've programmed Travis county's Simulcast1 and Simulcast2 (control channel only) towers, and those frequencies are in fact different. Is the exact same traffic transmitted on both towers all the time, or is it similar to a cell system where the simulcast only happens if a mobile (part of that talk group) is present in that signal area?

3647. For the Williamson Co Simulcast sites, all the radio traffic will be simulcast on the same towers at the same time.

Yahoo group: CenTexComm
Date: 2008-03-23 00:20:34 UTC
From: Robert Barker
Topic: 1606 Message: 3647

120 Williamson County Simulcast
<javascript:LaunchWindow('/apps/db/?action=siteInfo&siteId=12727','win','height=800,width=600')>
854.98750 855.21250 855.71250 856.96250 856.98750 857.98750
858.96250* 858.98750 859.98750
860.96250* 860.98750

For the Williamson Co Simulcast sites, all the radio traffic will be simulcast on the same towers at the same time. Since they are the same frequencies.
It is basically like a Simulcast 3 I guess. So this will be their "home" tower. If they travel closer to a site that might work better such as the Homecomb Intellirepeater, then that talkgroup may also show up on there, but that could change with every transmission.

For the Austin Simulcast sites it is similar. Most Public safety is on the Simulcast 1 sites.
Most City of Austin Service such as Street and Bridge, Water Wastewater, Convention Center, etc. are on Simulcast 2 as their home site.

The Bell County PST is simulcast. 4 tower sites, 19 repeaters per site, identical traffic on all sites all of the time. The receivers are voted at the control point and retransmitted. The PCM multiplexers have bulk delay that delays the entire 1.544 mb/s outbound stream so signals are in time in the non-capture zones, and the local oscillator at each tower site uses GPS time signals for discipline. There is no hand-off between sites with simulcast. As far as the subscriber radio is concerned, it it just one big 19 channel system.

3650. DPS Traffic on the 700 Mhz tower for Austin Trunked Radio System

Yahoo group: CenTexComm
Date: 2008-03-25 19:16:04 UTC
From: Robert Barker
Topic: 3650 Message: 3650

I confirmed that I am hearing a DPS talkgroup on the Austin TRS: Central <javascript:LaunchWindow('/apps/db/?action=siteInfo&siteId=11977','win','height=800,width=600')> Austin tower. The Control channel for this tower is 764.46875* The DPS talkgroup seem to be the only one I am hearing and it appears to be both base and mobiles using the KKD303 callsign which indicates it is a simulcast of the 155.46/154.680 traffic. I will post more info on the talkgroup and other frequencies when I have them.

The Transmitter seem to be located either downtown or near DPS Tower on I35/Rundburg as I am not hearing it up north off Parmer Ln.

See the rest of the towers at :
http://www.radioreference.com/apps/db/?sid=2
<http://www.radioreference.com/apps/db/?sid=2&opt=all_tg#tgs>
&opt=all_tg#tgs

DPS may be the only one licensed, but Starnet is using 700 MHz frequencies on its P-25 system (Walker, Matagorda, Fort Bend, and Harris counties). I have searched the frequencies in the FCC database, and I either did not search correctly, or the information is "hidden" or licensed in another state.

I just wanted to jump in and take all the credit for finding that info..lol.. i'm stealin' robert's thunder this time :P hah.. The story behind my finding that is as follows: just another boring tue. nite.. so I start wondering what this Austin Central tower is all about.. since I'm in Central Austin, I was able to pick it up fine.. then this 3525 talkgroup keeps popping up on the ctrl (not on RR at the time). .. well, I put it in and hear both sides of DPS Austin.. COOL! Usually when I find something like that, robert is the 1st person I call.. He couldn't get the signal in his area but later got it.. I don't know if that 3525 talkgroup is listed on RR now, but you can only hear it on that 700 freq. FYI .... I heard something from a TXDPS employee about some mod to their current radio to use that, but it's far fetched, and I'm going to check it out before I blab about it.. heh.. To those of you that can get the Cen Aus tower, enjoy!

3662. DPS Austin on 700 MHz tower 110.

Yahoo group: CenTexComm
Date: 2008-03-30 11:33:28 UTC
From: navscanmaster@aol.com
Topic: 3662 Message: 3662

Hey guys, got radioreference.com updated this morning. Try to see which voice frequencies are being granted when that talkgroup pops up so we can add them to the database as well. A lot of people have Pro-96s that will listen to conventional 700 MHz digital traffic, but are unable to trunk it. Having the voice channels used in the database will at least help those in the area that have a Pro96 hear both sides of Austin dispatch for a change if they so please. Just confirming, I changed TG 3525 from Capitol Police Division to Austin THP dispatch. There is no more CPD traffic on this TG, right?

From: Mark Summers
Topic: 3659 Message: 3663

Robert,

Thanks for the clarification. However, that leads to another question on entering Talkgroups into my BC296D scanner.

What is the most logical method to enter talkgroups and trunk frequencies into my scanner? For instance, for listening to the 800Mhz system in the Buda/Kyle area, I have entered the five system frequencies for the 109 Creedmoor IR tower into Bank1, but I have many more than 100 talkgroups to enter.

1) Do I reenter the same system frequencies into Bank2, Bank3, etc., until I have enough room to enter all the talkgroups I am interested in? If I am always listening from the Buda/Kyle area, is there even a reason to enter another set of tower frequencies (such as the Central Austin Tower or Simulcast 1) into (an)other bank(s)? If I do this, will I need to reenter all the talkgroups into the new bank(s) that already exist in the banks with the Creedmoor tower?

2) Is the red frequency listed first in the bank, or are they entered in the order listed on radioreference?

3) From Buda/Kyle area, although is Simulcast1 is further away, it seems to have further range into Kyle than say the Central Austin tower, which his actually closer. Any thoughts on the preferred towers to enter?

It just seems as if you run out of locations to enter talkgroups way before you run out of talkgroups that you might like to enter. I suspect this is Trunking101 for most of you folks, but any help will be appreciated.

-Mark

There's a hack to open up I think 18 MHz though 1300 MHz (minus cellular).

Mark;

The LCRA System is an Erisson based system. Services such as San Marcos/Hays co.EMS/Fayette County EMS/Police/Sheriffs office use that system. Only thing is...unless there is a radio tracked by the tower located close to you (Creedmoor) you will not hear traffic from those entities. for example; Fayette County EMS taking a transfer to Austin. The mobile radio will bank to that tower in Garfield on the way to and from Austin, that is probably the only time someone with a fixed location scanner might hear that traffic, unless you have other tower freq's plugged in and have clear enough range from your handheld. Since the LCRA has towers linked together from the Colorado River path and a few other towers, which they put up in agreement to better public safety use to contracted users. I havent worked for Fayette County in a little over a year, but i remember some of the towers were; Brownwood, llano, lometa, georgetown, austin, creedmoor, san marcos, boerne, elgin, bastrop, flatonia, la grange, giddings, brehnam, schulenburg, flatonia, hallettsville, gonzales, columbus, and some others more to the houston area. If you havent already, i would recommend putting up a push up pole at your house with a scanner antenna for better reception if you can (homeowners restrictions, apt complex).

3667. Re: [CenTexComm] Re: DPS Austin on 700 MHz tower 110.

Yahoo group: CenTexComm
Date: 2008-03-31 11:52:53 UTC
From: navscanmaster@aol.com
Topic: 3662 Message: 3667

In a message dated 3/30/2008 8:32:03 A.M. Central Daylight Time,
banda@... writes:

Is there some trick to listening to 700 MHz traffic on a Pro96?
The frequency coverage is listed as:
25-54, 108-136.9875, 137-174, 216.0025-221.25-54, 108-136.9875, 13
806-823.9875, 894-960, 1240-1300 MHz

If you download Win96 from starrsoft.com, you check the extended frequencies box to open up the 700 MHz band. You will need to buy the software after the free trial, and you need the programming cable from Radioshack. It is a USB-mono type device with a chipboard in the middle, and it runs like $15 if I recall right.

3670. Programming Trunked Systems.

Yahoo group: CenTexComm
Date: 2008-04-01 21:57:49 UTC
From: Robert
Topic: 3670 Message: 3670

Most of the newer scanners for Motorola Systems such as the one used by the City of Austin can do "control channel" trunking, so all you have to do is put in that one control channel per tower and make sure the settings on the radio are correct (set to Motorola) and the scanner will do the rest. The primary control channels are listed in red on this site. As far as I know, they are all correct. I have not seen the secondary control channels used in awhile.
I would make each bank a separate tower and label it accordingly.
You don't need to put in every single talkgroup you see. Just put in the main ones.

The LCRA system requires that the frequencies be in the exact order and they must all be entered.

3671. DPS Austin is on 155.4675

3680. Monitoring Camp Mabry - anyone with trunker ??

Yahoo group: CenTexComm
Date: 2008-04-20 13:25:15 UTC
From: Robert Barker
Topic: 3680 Message: 3680

Because of the American Heroes Air Show at Camp Mabry, there is a lot of activity there today. Can anyone do some monitoring to see if they can figure out their system:
http://www.heroes-airshow.com/texas.html
I am hearing a control channel on 407.700 which may be part of this new system http://www.radioreference.com/apps/db/?sid=4154 (Apco 25)

or they could be on this old system:
http://www.radioreference.com/apps/db/?sid=324 using 408.2375 (control ch) and possibly 409.2375 and 409.4375 but I am NOT hearing this control channel from my location. (Motorola Type 2 analog)

There is also another unidentified system in Austin, on http://www.radioreference.com/apps/db/?sid=3860 using 407.075 as a control channel. (EDACS analog)

Or they could be on the Austin TRS but I have not heard them.

From: John Mayson
Topic: 3687 Message: 3687

---------- Forwarded message ----------
From: Ray <w5xe@...>
Date: Tue, May 13, 2008 at 4:50 PM
Subject: [UDXF] Re: China Earthquake
To: UDXF@yahoogroups.com

The below info came from the CQ newsletter earlier today and might be
of interest
to members of the group that do not get that info:

From the CQ Newsroom...

Amateurs in China are asking that 14.270 MHz be kept clear as an
emergency frequency in the wake of yesterday's devastating earthquake
there. Please remember that even if you cannot hear a station on the
frequency, you might interfere with reception of transmissions by a
station within range of both your signals and theirs.

Michael Chen, BD5RV, reports in a post on qrz.com that "a group of
radio amateurs is now transmitting from Wenchuan, the center of quake.
Its signal is reported to be very weak. They tried to keep
communication with BY8AA in Chengdu, seeking for all resources needed.
During a contact finished a few minutes ago, they were asking for
raincoats, water, tents, and outdoor living facilities." Michael also
asked that this request be forwarded as widely as possible.

In nearby Myanmar (Burma), where tens of thousands of people were
killed by a typhoon last week, CQ Public Service Editor Bob Josuweit,
WA3PZO, passes on a report from G4HPE of the International Radio
Emergency Support Coalition (IRESC) that there currently is no amateur
radio activity there; and that while the UN has been permitted to set
up both HF and VHF communications based in the capital city of Yangon
(Rangoon) "for use by the entire humanitarian community," none of the
frequencies in use are in the amateur bands.

From: jose esqueda
Topic: 3689 Message: 3689

Just checking in. What is going on with everyone? Well for me, I am leaving Austin. I start a new job in McAllen TX. I will be Chief Photojournalist for the City of McAllen under the Public Information Office. I leave FOX 7 after 11 years, but I will have quality time with my family. I hope everyone is doing well. I will be in touch.

Thanks. I just now heard about it. It looks like there was extensive
damage. The Perry's were out of town and the mansion was vacant due
to renovations which included a sprinkler system.

3695. FW: 911 Call to AFD regarding Fire Alarm at Governor's Mansion

Yahoo group: CenTexComm
Date: 2008-06-09 16:56:54 UTC
From: Robert Barker
Topic: 3695 Message: 3695

I'm looking at a lot of pics and all from the Fire at the Governor's Mansion.

Of particular interest to me is this 911 call that came in from Capitol Division about a fire alarm. It seems to be one of the fist calls. Another interesting point is that the AFD dispatcher's computer is slow and there is a delay in his ability to update the call.

The box alarm was already rolling... I don't see any serious delay here. I'd imagine with the box alarm having just been dispatched that there were several folks updating the call, including units marking as responding via MDT, etc. Again, I'm not seeing the problem.

I know the building was unoccupied, but were DPS troopers still
assigned to the building? I'm just curious is all.

The news made it sound as if there were, but I is not the ex-pert on DPS deployments at the Capitol complex.

I was responding to the "his computer was slow" comment from Robert. I'm not sure his computer was slow at all - other than them getting multiple calls and updates from multiple units enroute from multiple agencies.

Mike :)

3700. The Governor's Mansion

Yahoo group: CenTexComm
Date: 2008-06-10 16:39:26 UTC
From: Robert Barker
Topic: 3700 Message: 3700

Walked over to the Governor's Mansion. There is a DPS, and ATF and a Tx State Fire Marshall mobile command post parked in front on Colorado which is blocked as well as 10th in front of the Mansion. There is crime scene tape up but plenty of news reporters and news vans and just ordinary people taking pictures. The back of the mansion has a carriage house that is supposed to be manned 24/7/365 by a DPS trooper who monitors cameras, and motion sensors all around the property. They always have an occasional person who tries is come over the wall or onto the property at night just to see if they can. The fire, which supposedly started on the front porch, got supposedly out of hand in just a short amount of time, so either some major accelerants were used or the fire had been burning for some time before anyone noticed anything. I am wondering where DPS was when this went down and if all the sensors, etc were turned off or what? Perhaps the trooper just wasn't there or on break or fell asleep. It was just interesting to hear the 911 call from DPS Capital Division since I'm surprised the initial call didn't come from the actual trooper who should have been on guard. That's assuming there was only one on duty and there should have been more than that at the time, but being that the property was vacant and being renovated, perhaps many of the cameras on sensors were turned off. There really was not a delay that we know of with AFD's response. It was just funny that he was trying to update the call and his computer wasn't taking the updates. This may just be an operator error. But it's stuff like that which can really matter in a building collapse or what if one of the callers had actually send the suspect running away and trying to give a description to the dispatcher who can't get his computer to take the update.

From: John Mayson
Topic: 3700 Message: 3701

Because it was being renovated, the governor wasn't living there, and all of the valuable/historic/sensitive items had been removed, perhaps there weren't any DPS troopers present or the security devices had been removed?

3702. APD Chief wants a new helo that can carry 6

Yahoo group: CenTexComm
Date: 2008-06-17 13:52:31 UTC
From: Robert Barker
Topic: 3702 Message: 3702

So a consulting firm hired by the city to find ways to save money recommended that they scrap APD's Aircraft Division but the chief says no and wants a 3rd helicopter, one that can carry 6 officers. He was talking on the radio about being about to transport the SWAT team on to the top of buildings and also wants one that can stay in the air longer and for fire fighting capacity. So what does everyone else think? It seems like the current helicopter just flies around for fun. They hang out by the N Sub off Lamplight Village just flying around and usually do it later in the evening about 5-9pm ish. It seems like the best use of the helo to me would be during morning and evening rush hr to help direct officers to collisions and keep the freeways moving. There is a big problem when it's a bad accident and they get close to 50 calls on the same collision but everyone gives a different address since no one knows the hundred block on the freeway. They could also be used on Friday and Saturday night or during peek hrs of calls) night to assist with chases and searches but they really can't afford to keep flying in circles all the time and should just be on the ground and available to respond when needed. I haven't honestly seen the helo do much of anything nor from the radio traffic have I heard them call out a pursuit or find any missing people or anything. I have never seen the 2nd helicopter other than it's a big green one that they got in a drug bust and I don't know if they ever painted it or what. (thought that was big enough to hold 6). And they also have an airplane but you never hear about that, except when they used it to pick up an officer injured in another state.

From: Mike Reed, LP
Topic: 3702 Message: 3703

I have to wonder why we need a helicopter for the SWAT team. From downtown, there's almost no place you can't get to in 30 minutes by ground... and how often does SWAT need to drop in via helicopter?

And firefighting? I thought that was Starflight's role as a multi-role county aircraft.

Personally I think this is a ploy to avoid scrapping the current air program - the compromise will be to keep things as-is - no new helicopter, but not scrapping the old one.

As a taxpayer, I don't see the need for it when current patrol shifts are only staffed to 80%. 3,000,000/yr would pay for 30 officers by the time you include salary, benefits, vehicles, gas, etc. That's what I'd consider a better investment (and we'd save money not paying as much overtime).

Mike :/

Plus the emmence cost for the upkeep of the aircraft. The 100 hour inspections and annuals that have to be performed.

I wonder what JET-A fuel is going for these days. A OH58 A or C (Bell 206 series) carries about 94 gallons of fuel and that is for 2.5 hours of flight time.

Jet-A is running roughly $4.50/gal, including taxes (from which the city is exempt). So, figure about $4/gal.

I'm assuming they don't burn all 94 gallons (returning dry is probably a bad thing), so let's assume 75 gal for 2 hours. That's $300, or $150/hr just for fuel.

Again, about three officers/hour when you include all the costs of having an officer on the streets.

And let's not forget... more cargo (people) = more fuel to keep it airborne.

Mike :)

3707. Looking for Bryan, College Station Frequencies

Yahoo group: CenTexComm
Date: 2008-07-14 18:29:25 UTC
From: Robert
Topic: 3707 Message: 3707

Does anyone have a data file for the Pro-96 for Bryan College Station frequencies and talkgroups. I may have to create my own from Radio reference, but just thought i would ask. Also anything new and unusual there would be interesting. You can email me privately for that.

Also for the Austin Travis Co System I'm hearing what appears to be a patch to "Llano" on talkgroup 1605. I'm not sure what frequency but it may be 154.205. All of the radio traffic seems to be related to Horseshoe Bay and FM 2147, so it may be Horseshoe Bay Police and Fire Dispatched by Llano Co.

3708. Re: [CenTexComm] Looking for Bryan, College Station Frequencies

From: John Mayson
Topic: 3709 Message: 3709

I didn't know Chuck, but some of you may have...

It comes with a heavy, sad heart to tell you that we have lost a great friend, mentor and longtime medic – Chuck Burt.

Chuck was killed yesterday morning on his motorcycle when a truck pulled in front of him over a blind rise. Chuck was returning from visiting his family and friends in Idaho and California.

Chuck devoted his life to helping others in many different walks of life. He devoted countless hours as treasurer, board director and active volunteer medic for the Motorcycle Special Events Team (MSET). For more than 10 years, he has spent hundreds of hours every weekend providing volunteer EMS service on his motorcycle with MSET to the many charity bicycle rides, marathons, triathlons and standby events. He represented MSET at the Corporate First Responders meetings and was very active as a volunteer at the EMS conference. Prior to MSET he coordinated volunteer EMS for the Austin Aqua Festival.

When not volunteering with MSET, he would devote his time to his family, the Gardeners Mens Club of America, the Texas Vulcan Riders association and the Patriot Guard. Last fall he was inducted as the National President of the Gardeners Men Club of America.

Chuck was a loving father and grandfather and would ride his motorcycle each year to North Carolina and Idaho to visit his family and the many friends he has met in his travels. In his last posting on his blog he proudly posted pictures of his new grandson and family.

He was a gentle man, very caring and dedicated to whatever adventure he was currently involved in. He had over 30 years service as a database administrator for the HHSC (Formerly Department of Human Services)

As an avid motorcyclist, he has spent his spent the last 4 years pursuing his goal of riding his bike in every state in the continental US. He completed his goal this last trip.

Chuck was a close friend, mentor, co-worker and fellow EMT to many of us. His presence will be dearly missed by all.

You can read Chucks travels at http://www.vroc13091.blogspot.com/ .
See a video tribute at www.texasvroc.org

Please could you pass on this information to who you deem appropriate.

Please contact me at 512-699-8611 or e-mail me at pio@mset-tx.org if you have any questions.

Topic: 3711 Message: 3712

Hey! I'm looking for someone who has any VHF or UHF Motorola P25 capable radios (that cover the ham band). Also I'm looking for a T3010DX (DVP Loader)

On another note..

I can program most of your Motorola radios AND Uniden or GRE DIGITAL scanners.. That's DIGITAL only.. and no, sorry... I don't do Radio Shack's pro96.

3713. Llano County to go digital (eventually)?

Yahoo group: CenTexComm
Date: 2008-08-29 17:55:09 UTC
From: Wes Ogilvie
Topic: 3713 Message: 3713

Llano County applies for radio system grant

Llano County commissioners recently approved submitting a grant request to the U.S. Department of Homeland Security to help pay for new radios and transmission towers. The Capital Area Council of Governments must approve the grant request before it is forwarded to DHS for approval.

Llano County officials requested $113,535 to purchase digital radios for county law enforcement agencies and $417,620 for three new communication towers, three digital repeaters and four backup generators to replace the county's existing radio towers. Llano County Judge Wayne Brascom said the towers and repeaters are critical for communications between law enforcement agencies throughout the county. Fire departments are included in the request and include Horseshoe Bay, Kingsland and several Llano county fire-fighting organizations.

3714. McLennan County & Skip Tonight

Yahoo group: CenTexComm
Date: 2008-09-07 03:26:41 UTC
From: commscan
Topic: 3714 Message: 3714

Hi Groups,

There is some apparent skip or ducting going on tonight in the VHF and UHF bands in the N. Texas area. I've been listening to a few agencies down south of D/FW like Hillsboro PD's P25 155.865 frequency. But I came across a new one (for me). I've known the frequency for years but thought it would be unused with McLennan County's 800 MHz use now. I'm receiving clear traffic on 154.875 PL 100.0.

I'm not sure if this frequency is still in use by the smaller PDs in the county that may not be on 800 MHz radio yet or just what the reason is for this channel's use. At one point, I thought this was an FD on frequency. But then I heard a DL return to Waco and another to Horseshoe Bend. I then heard Old Bethany Road and Lorena mentioned as locations. All of these (plus some other traffic) confirm McLennan County's use of this frequency still.

Does anyone know what this purpose of this frequency is? I've seen the RR.com listing for McLennan County SO 1 and how this frequency is simulcast with Waco's TRS TG 528. Is this frequency still used regularly in McLennan County?

Thanks for any additional information.

Brian

3719. Houston Radio Traffic TxDot Links

Yahoo group: CenTexComm
Date: 2008-09-14 16:39:39 UTC
From: Robert
Topic: 3715 Message: 3719

TxDot has some links that you can hear in Austin on
151.085 FM and 151.0175 FM

I heard them say that the National Guard Helo's can't communicate with
local units on the ground (police and fire) and are having trouble
trying to find out who needs what.. this comes up every single time.
Is anyone in Houston? Did the trunked system hold up?

3720. Re: [CenTexComm] Houston Radio Traffic TxDot Links

Yahoo group: CenTexComm
Date: 2008-09-18 02:55:53 UTC
From: Myles Barkman
Topic: 3715 Message: 3720

Just got my internet/cable back up today.
I didn't really get much of a chance to listen to the trunk system during the storm. I was just west of the path and about 30 miles inland and had my attention on more personal matters at the time.
From what I see reported on HoustonScan, most of the Regional Radio System worked, albeit some in site trunking mode.
For those that don't know, site trunking is when the users of a particular site are only heard on that one site.
So the SmartZone part of the trunking is not working. So if Pasadena PD dispatch was on the Pasadena system, and a mobile officer was affiliated on the Baytown site, they would not be able to hear each other. They would all need to be set on the same tower.
I don't know the status of the Galveston site. I can't hear it from my place anyway.
I can hear the Texas City site, and hear Galveston PD traffic on it.
I know the Galveston NOAA Weather Radio transmitter is off the air. I hear the College Station one sometimes.

Myles

3721. VHF-Hi Skip This AM

Yahoo group: CenTexComm
Date: 2008-09-22 10:24:58 UTC
From: commscan
Topic: 3721 Message: 3721

I'm hearing some decent VHF-Hi skip/ducting this morning. I've been tracking down the user on 154.145/225.7 PL for a little while. I was able to confirm thru a location given (off FM 979), the FCC database, RR.com, and from listening that it is Robertson County Fire & EMS dispatch I'm hearing from NW Tarrant County. There are a lot of PL tones on numerous frequencies (i.e. 155.100 with 82.5/100.0/123.0) in the VHF-Hi band. I haven't checked any UHF out yet but I probably will.

Medic 3 is enroute to "St. Jo's" with their patient now on 154.145.

I would like to find someone who wants to trade their trunking/digital scanner for a 25 watt, 32 channel, UHF (450-470 MHz) Motorola Maxtrac or a 800 MHz Trunking Maxtrac. I have both the D35 and D45 models (15 and 35 Watt respectively). Each radio will have a microphone and mounting bracket.

Batlabs has the following to say about the trunking Maxtrac:

Trunking 800MHz Maxtracs
From http://www.batlabs.com/maxrad.html

These are radios that usually have model numbers starting with D35 or D45.

You can convert a trunking Maxtrac or Radius back to conventional 800MHz operation. You will need to replace the trunking firmware in the radio with conventional firmware. You will then need to blank the logic board with Lab RSS, and re-initialize it as a conventional radio. Note that before changing the firmware and blanking the board, you should write down all the alignment settings in the radio.

Conventional Maxtracs make nice receivers for receiving your local trunking system's data channel... for use in Trunker of course. If you don't know what Trunker is, you better check out Lindsay's Site. You will find that if you connect your data slicer to RX Audio (Pin 11) and Ground (Pin 7) on the Accessory Connector, you will have a nice little setup. One thing you will want to check though, is that JU551, a 3 pin jumper header on the logic board, is set to Position A. This will give you flat, unmuted audio on Pin 11 of the Accessory Connector. This is assuming of course that you are using a radio with a 16 pin Accessory Connector, otherwise, you are on your own.

If you're playing with Trunking Maxtracs and TrunkTrackers, you may be interested in this conversion spreadsheet. It is a Microsoft Excel document. It converts Motorola Talkgroup ID's to Maxtrac ID's and TrunkTracker ID's.

If you are working on tuning up a Trunked Maxtrac, here is the information on putting the radio into test mode.

Best regards,
Glenn

3728. An Austin Question

Yahoo group: CenTexComm
Date: 2008-10-29 13:59:08 UTC
From: Jon
Topic: 3728 Message: 3728

Just a question for those of you who live down in the Austin area. I come to Austin pretty often for business and want to do some listning. But I'm having some issues at present just getting good signals and listening to the whole conversation.

I have a 996 and a 396. I'm looking for some suggestions about how you listen and so forth...

I usually am down in the Downtown area in a hotel. DO you listen to both simulcasts? What about the Central Austin site?? How does it fit in? What are you delay times and so forth?

Any suggestions or help would be appreciated.

Thanks

Jon

I haven't figured out rhyme nor reason to the two simulcast sites.
I'm guessing there are talkgroups that show up on one, but not the
other, but I couldn't tell you what they are. I have both in my 296.
I use the default delay which I think is 2 seconds.

I'm be interested to know if you hear any Williamson County units downtown.

John

3732. What simulcasts are what?

Yahoo group: CenTexComm
Date: 2008-10-29 17:07:15 UTC
From: Robert Barker
Topic: 3728 Message: 3732

Most of the City of Austin non public safety and prob county agencies are on the Simulcast 2 tower, such as street and bridge, Trash, water/wastewater, UT parking, and the dreaded Convention Center talkgroups. It is their "home" station. Which means the radio looks to broadcast on that tower first unless it just can't find a strong enough control channel and then will go to another one. I was originally told that the Simulcast 2 towers were mostly in the county and not in the city.

Most of the Law enforcement and other Public Safety are on the Simulcast 1 tower; including APD, EMS, Fire, UT Police, TCSO and Travis Co Jails. This would be their home. Since there are so many of them, you will prob hear them a lot also on Simulcast 2 but it would just be because one of the radios in the fleet may be hearing that control channel stronger. Supposedly the Simulcast 1 towers are mainly located in the city. I have heard some DPS trooper traffic on talkgroups on Simulcast 1 but I am not sure if all their cars are equipped or still converting. There is still a good bit of traffic on the 155.4675 and I'm not sure that it's always simulcast.

The Central Austin 700 Mhz site seems to be the DPS Capital District almost exclusively. I have not heard any APD, EMS or Fire traffic on it. The Capitol District mainly watches over the state buildings and includes law enforcement and guards that are stationed at entrances. I wish they would put all the UT traffic here too.

Williamson County and cities in Williamson County have that as their home site. There are some instances where units will stray away and the radios find a stronger control channel from a neighboring site. For instance, I'm sure the officers will occasionally bring prisoners to downtown Central Booking or the EMS units will come down to Brackenridge or another hospital further south. So you will hear an occasional Williamson County talkgroup pop up on the Austin simulcasts. But it's just hit and miss as to when that would happen.

I often her Williamson Co talkgroups come up on the Honeycomb (Nameless Rd) site since that is just off FM1431 and would catch a lot of units that may be in the Cedar Park area. The one that comes up the most however is Georgetown PD 4831 and I can only assume that someone down in Austin loves to scan that talkgroup

My parents live in Lago Vista, and the North Shore Fire/Rescue has Simulcast 1 as their home station. I wish they had one of the closer intellirepeaters such as Marble Falls or Honeycomb/Nameless as their home since the reception for them is not as great as it would be if they were on a closer tower. They always have to repeat their radio traffic since the radios fade out a lot. Since the Travis Co SO and Austin EMS units go so far out in the

county, they are they ones most commonly also heard on the intellirepeaters.
I also hear a lot of Travis Co park ranger traffic on them.

3733. Radio Shack Friends and Family Coupon Through Sunday

Yahoo group: CenTexComm
Date: 2008-11-01 16:18:43 UTC
From: Robert Barker
Topic: 3733 Message: 3733

I'm not sure if everyone is aware but Radio Shack has put out a "friends and family" coupon that is pretty much 30% off anything in the store.
Link to the coupon:
<http://view.ed4.net/v/WUDODZ/2VR/M9S9H0S/YGHGT/MAILACTION=1&FORMAT=H?EDID=WUDODZ-MR5-K9E9I-8NG-GQR-v1>

To get the 30% off, you must go in person to a store. You cannot order online or phone.
The stores from what I understand are being very friendly with the coupon so they are not giving anyone any trouble and you do not have to know any employees.
The Pro-96 handheld and Pro-2096 base are the ones that will get the Austin system and the price on them has dropped to $379.99 - and with this deal the price with Tax and discount is about $288

The reason they dropped the price on the above radio is because Radio Shack has just come out with the brand new Pro-106 handheld and Pro-197 base. This is supposed to be a bit fancier and I really do not know the details on the new radios and how they differ; just a few more fancier features. The price on these is $499.99 - and with this deal the price with tax and discount is about $379

The store will most likely not have these radios in stock, so they will order them for you and it will be shipped to your house about a week later using standard shipping. I think this is a pretty good deal for the Pro-96 and Pro-2096. Remember the store has a 30 day warranty so if you TAKE CARE OF IT and do not do something like rip the box in half, then you can always return it within 30 days at any store.

They will love to try and sell you a ton of accessories and extended warranty on the radio but it's really just a way of them making extra money off of you. For example, an AC adapter for the handheld can be purchased at Big Lots for $5.99. The only accessory that I recommend is the 800 MHz handheld antenna Model: 20-283 Catalog #: 20-283 that sells for $20; It has a BNC connector on it and it is the best antenna for the price to monitor the Austin System. I do have both a Pro-96 and Pro-2096 and can help with questions or programming. For more info on the new radios, you might want to check out www.radioreference.com Forums Section. If anyone has one of the new radios, I would love a report on how it works with the Austin system. Don't forget that since the newer scanners are out; many used Pro-96 will start showing up on places like www.ebay.com or maybe even www.craigslist.com.

3735. Radio Shack Pro-106 and Pro-197 on sale $400 - 30% off coupon today only = $308.08

Yahoo group: CenTexComm
Date: 2008-11-02 15:03:51 UTC
From: Robert Barker
Topic: 3735 Message: 3735

For those of you keeping track; Radio Shack has put the newest scanners

on sale today. The PRO-106 handheld and the PRO-197 base from $499.99
down to $399.99 (that's $100 off). If they take the Friends and Family
Coupon that only works today (Sunday) that will be about $308.08 with
tax included.
This is a very good deal. Unfortunately today is the last day of the
coupon, and to get the deal you must walk into a store and do it in
person. They will most likely not have the radio so they will have to
order it and it will be shipped to your house in about a week. I am
surprised that they put this radio on sale that has only been out about
a week or so and have it overlap with the coupon. I wonder if this is a
sign of things to come regarding deals around Christmas. I am never
fond of getting the first radio since there are usually some corrections
that are made with later models. I'm just passing on what's being
discussed at www.radioreference.com Forums

link to scanners
<http://www.radioshack.com/family/index.jsp?categoryId=2032072>

Link to the coupon:
<http://view.ed4.net/v/WUDODZ/2VR/M9S9H0S/YGHGT/MAILACTION=1&FORMAT=H?EDID=WUDODZ-MR5-K9E9
I-8NG-GQR-v1
<http://view.ed4.net/v/WUDODZ/2VR/M9S9H0S/YGHGT/MAILACTION=1&FORMAT=H?EDID=WUDODZ-MR5-K9E9
I-8NG-GQR-v1>>
To get the 30% off, you must go in person to a store. You cannot order
online or phone. The stores from what I understand are being very
friendly with the
coupon so they are not giving anyone any trouble and you do not have to
know any employees.

Pro-106 Wiki
http://wiki.radioreference.com/index.php/Pro-106

Pro-96 Wiki
http://wiki.radioreference.com/index.php/Pro-96

The Pro-106 is manufactured for Radio Shack by GRE America Inc.

The Radio Shack is a Digital Trunk Tracking scanner which boasts the
ability to track APCO 25 digital trunking systems, in addition to
following Motorola type I/II systems, LTR and EDACS trunking systems. It
is very similar to the GRE PSR-500
<http://wiki.radioreference.com/index.php/PSR-500>.

The Pro-106 is functionally identical to the PSR-500 <http://wiki.radioreference.com/index.php/PSR-500> and uses the same radio control software <http://wiki.radioreference.com/index.php/Radio_Control_Software> and scanner cables <http://www.starrsoft.com/software/Win96/Cables/cables.html>. Firmware updates are NOT compatible between this radio and the GRE PSR-500 though.

The radio can be programmed using <http://www.starrsoft.com/software/win500/default.asp>

thanks and sorry for the delayed thank you... but thank you!

LOL

Just like you said.. I turned off my Simul2 sites and it worked MUCH better. And sure enough, I heard the Capitol police mostly on Central with an occassional one on Simul1

I only had one instance on NW that I would hear the units better on on Simul2 than on 1.... that was weird.

Also, being elevated in the hotel made a HUGE difference. ONce I got on the street level headed home, I heard much better.

I did hear a Williamson County Deputy saying he was clear from Brack and headed north.

Thanks for all the info all!

Hi John!

There's a lot of ProVoice but also a lot of analog calls on the county's EDACS system.

It isn't encrypted - it's just ESK. If you have a PSR500/600 or PRO-106 or firmware updated BCD396T - you can monitor the analog calls just fine.

Howdy folks!

I apologize for this being off topic but I couldn't think of anywhere better to ask such a question (this and RR Forums). I was in Austin last week for the football game, as we were driving through downtown someone in our group asked if anyone knew what this tower deal was...

It looked like an antenna of some sort, about 35-45 feet tall, very top heavy looking, and had a bunch of lights on it. Now looking at it during the day it looked to be some sort of surveillance system but the lights didn't really seem to be positioned for a camera...

Also, by chance would anyone know what the outcome of the t.u. frat boys that were arrested by DPS during Yell Practice on Wednesday night?

Thanks,

Pryce Marshall

3751. SkyWarn 2009 Coming Up.... Mark Your Calendars!

Yahoo group: CenTexComm
Date: 2009-01-05 17:25:22 UTC
From: Robert Barker
Topic: 3751 Message: 3751

A reminder that the SkyWarn 2009 Training Session is coming up on Saturday / 21 February at the University of Texas Pickle Research Campus (in the Commons).

You can see all the details, including the program schedule, at... http://www.utexas.edu/depts/grg/kimmel/skywarn2009.html

This is a free severe weather spotter and safety training session taught by Paul Yura, Warning Coordination Meteorologist, National Weather Service, Austin-San Antonio.
Everyone is welcome!!

Certificates of completion, for 5 hours of severe weather recognition and safety training, will be presented at the conclusion for those that complete the entire session.

Please feel free to pass the email to others in your organization(s) that might want to participate.

If you have any questions, please feel free to drop me an email.

Troy

Kevin,

I checked with our Telecom guys; they confirmed that LCRA isn't handling Bandera's radios and doesn't know who might be. However, more of our field guys were in today and I asked them if they knew. They didn't but have relatives that work at PEC (who may know) and other co-workers who live in Bandera's area... so we're still working on an answer for you!

3762. Austin/Travis County EMS moves

Yahoo group: CenTexComm
Date: 2009-01-14 17:12:02 UTC
From: Robert Barker
Topic: 3762 Message: 3762

I received this email about Austin/Travis County EMS moves

A/TCEMS will be redeploying our special operations units. This month MR26 will become a field unit due to rescue staffing shortages. Also in April A/TCEMS will be moving other Spec-Ops units around. Medic 8 (Tactical) is staying put with Quint 19. Medic 10 (HazMat/Bomb Squad) is moving to MR30 with ENG42 across the street from ABIA. Med-Rescue 30 (Rescue) is moving to Medic 21 with ENG 902. Medic 21 (Field) is moving to Medic 10 with ENG25 as a field unit. MR01 and MR17 (Rescue) are staying put in their stand-alone EMS stations. Everyone is taking their current apparatus with them and they will re-numbered to match the new station assignments. Not sure of exact date however this will all occur in April in conjunction with the next bid process.

There may be a pop quiz on this so be ready (joke)

Topic: 3750 Message: 3763

This guy is probably one of those that believe all criminals carry scanners and know how to use them. I bet he didn't know how to use his new "GRECOM" PSR-500 without the help of someone who did.

What people who aren't in our hobbies and lines of work don't understand is this. This is something we enjoy (scanning). It is something that you either like or you don't. It is a passion for many of us and it isn't a class that criminals decide to take before they get into a life of crime.

And the criminal element has caused our hobby very little trouble throughout history. It's because they don't care for the hobby enough to learn how to utilize a scanner for pleasure, much less, something criminal. Heck, even in the days of just entering a frequency or a crystal to a scanner, there wasn't (and never really has been in my opinion) a problem with criminals using scanners to commit crimes.

The news media in the Dallas/Fort Worth area (and nationwide too) had TV viewers a few years back believing that when an Irving PD officer was shot and killed on Christmas Eve by the "Texas Seven" (prison escapees...later caught/killed/etc in Colorado), these guys hit a Radio Shack or two stealing money, scanners, and scaring patrons and employees because they were "smart". The media made these guys sound like they were super intelligent criminals that had the sense to steal scanners to listen to cops. This was the farthest thing from the truth. The Texas Seven may have stolen the scanners for this purpose, but nobody knew how to program or use them. The scanners became dead weight to these guys and were useless to them. Still, it tarnished the scanner listener's name and hobby just enough to cause concern and more misconceptions nationwide.

Sure, there will always be those that do use scanners to commit crimes just like they use ski masks, maps, or anything else they know how to use. That goes without saying and it applies to every field out there. Just like there are some scanner hobbyists that will commit crimes using their scanner, there are preachers or priests that will steal from their churches or commit some sort of sex crime. They are the exception to the rule though.

And the idea of using someone's DL return heard over the air, well, it just isn't plausible. It's not impossible to commit some sort of crime this way I'm sure, but we all know that anyone can get the same information from public records for free most times. A criminal doesn't need to learn how to use a TrunkTracker scanner, listen to traffic stops, and do whatever else they do to steal some poor fool's identity (when he's probably being arrested because he didn't pay a traffic ticket he couldn't afford anyway).

Thanks for the link John...I needed a good laugh. Like you said, "Good Grief"...

Brian

3764. Fwd: This is (not) an Emergency

Yahoo group: CenTexComm
Date: 2009-01-23 22:45:21 UTC
From: John Mayson
Topic: 3764 Message: 3764

This is (not) an Emergency

"This is MetroRail #104. I just had a collision with a car at the Metro Drive crossing, and people are injured." That's more or less what one of our train engineers will say when he or she contacts rail dispatchers on Thursday morning around 10 o'clock. Fortunately, this is just a test. Capital Metro will stage a rail emergency drill at the crossing by the entrance to the Leander station.

It'll be a great opportunity for Capital Metro and the first responders to practice coordinated emergency procedures in a "live" situation. We'll try to make this as realistic as possible. Here's the scenario: a car speeds through a railroad crossing and is struck by a train. The engineer notifies dispatch, then the dispatcher calls 9-1-1. There will be mock victims with a varying level of injuries and perhaps a few other surprises that we won't mention ahead of time since you don't get that kind of advanced warning in a real emergency.

Following the rescue efforts, there will be a debriefing to critique the operation. You can spend years preparing for emergencies—and believe me, we have— but you never know for sure what will happen if and when you ever have to put those plans into action.

Capital Metro meets regularly with the various police, fire and other emergency responders in the area to focus on rail safety and emergency preparedness. Thursday's drill is just one part of the overall safety and emergency plan.

I wouldn't want to post something about rail safety without also encouraging you to review these safety tips. I'm sure you've heard these things before. But despite the fact that it's dangerous and illegal to walk on railroad tracks or drive around railroad gates, people still do it.

With all due respect John, there are a lot of people out there who can not afford the converters, never mind a new digital TV. The coupon fund was exhausted mid 2008. A delay will allow the government to refund the trust and issue ore coupons or, at the very least, issue vouchers that distributors can cash in though some method.

I am not one for government handouts but if they are laying this burden on us, they must take all of those who can not afford anymore government "help".

That's part of the problem I have with this.

1. The FCC should've mandated all new TVs be digital ready years
before DTV went live. By now digital TVs would be very reasonable.
2. If it's so important people be able to watch TV then why aren't the
networks chipping in? Or the advertisers?
3. I've seen the converter boxes at Walmart for around $40. We're not
talking about a huge sum of money.

But my issues with how this has been handled go much further. :-)

Not to start a political flame war. :-)

I'm on the fence whether the government should be funding digital converters at all. It was their mandate, but they also got rid of analog cell phones without buying everyone digital phones.

A better solution, IMHO, would've been to handle this through the 1040 form. If you're low-income you get a DTV tax credit or coupons with your tax refund.

Discuss. :-)

1) Unmarked, or subdued markings (i.e. the "stealth marking" vehicles)?

2) What you describe sounds like a tac-team vehicle takedown, yes.

3) Are you sure it was APD? There's also federal agencies that operate in the area.

4) What am I watching out for?

Mike :)

I saw what I was told was a TCSO unit. If you looked at the vehicle
just right you could make out the word "Sheriff". This was on Parmer
Lane near the Travis/WilCo line.

>
> 2) What you describe sounds like a tac-team vehicle takedown, yes.

I have heard ICE is getting more aggressive. Could be them.

You know, when you're driving 80 mph down Parmer while texting on your
iPhone. :-P

3778. APD Street Response

Yahoo group: CenTexComm
Date: 2009-02-23 21:13:13 UTC
From: Robert Barker
Topic: 3775 Message: 3778

This is probably just APD Street Response (SR) units that concentrate on target or trouble areas.

They respond to complaints from neighbors on crime in the area and will go in using the Tac (undercover) units with a zero tolerance policy and basically tying to clean up the area. You may have seen on the news about a hotel near I-35 and Rundberg where this is happening. Lots of drugs and prostitution. Stuff like that. I think another problem area has been on Airport Blvd by Highland Mall and Huntland. Of course these Street Response units will be using the SR talkgroups. They may be in their Tac (SWAT) outfits; or some may be uniformed or they may even work with regular patrol units if they need a vehicle stop. There really has not been a lot of federal stuff going on around here so I don't think it's anything super secret. I have never seen or heard of any ICE taking people down or making stops at all. If they are, then they are probably working with APD Street response.

Subject: [CenTexComm] APD Unmarked

I work north austin, and have seen on fairly regular occasions, the unmarked Dodge Magnums making traffic stops in the area. couple nights ago at a local small oriental restraurant, officer in black swat bdu's making a 'take out' stop. He and his buddies were in a full size, white, ford van (Econoline type - 7 passanger or so), all side and rear windows tinted, no markings, exept for that small 4 or 5 inch verticle plastic covered antennae on top of the van. Thinking this is a tactical response type vehicle, 3 - 4 officers in one vehicle. Watch out, Guys!

Is "ICE" -- Immigration and Customs Enforcement, I guess?

I've seen quite a few TCSO vehicles with the 'stealth' markings; and, Lakeway PD has one, too. You DO have to catch them at an odd angle to see the graphics on some of them, at times.

3784. Weekend recap; stabbings, Luby's roof collapse and Bastrop fire

Yahoo group: CenTexComm

From: Robert Barker
Topic: 3784 Message: 3784

Pretty active weekend scanner wise. There was some previous talk about the increased violence downtown. Another couple was attacked this weekend for their car keys and fortunately the suspect was caught and arrested.

2 - 20 yo males were both stabbed at 7th and San Jacinto approx 245am on Saturday. Not sure what came out of that since I don't recall it ever making the news.

Did anyone else monitor the roof collapse at the Luby's? (Oltorf and I35) EMS went nuts and declared a full blown mass causality incident. It seems like they sent almost everything they had but when all the dust settled only 2 people were transported. I heard Special Operations 4, District Command 5, Medic 1, Medic 2, PIO, EMS 100, ESU 1, Medic 28, Med Rescue 1, Medic 6, and DM 3. They talked non-stop for about an hour; and gave tons and tons of updates. I guess we still do not know why the roof collapsed, but it was very windy at the time.

Then there was the big fire in Bastrop. I didn't heard any of that radio traffic personally. It sounds like they have a real problem with not having fire breaks and not enough equipment to handle the Fires for that area.

That, or 40+ mph winds and no rain.

Wait until it comes to one of the greenbelts in Austin... people in the emergency response community have been talking about that one for years now. The drier it gets, the worse it gets.

Mike :)

Last I heard only Leander PD and certain sensitive talkgroups of other
agencies would be encrypted. I had my scanner on recently (some time
last month) and GPD was in the clear. It does appear that they're
(GPD) at least encrypting their dispatch channel:

From: commscan
Topic: 3795 Message: 3795

Hi Group,

The following information is something I sent in the wee hours earlier today and I sent this to my local DFWScan list. The reason I'm sending it here now is because of some of the information I heard on the frequency and it's leading me to believe this user may be around Waco. Some additional information I've heard since my earlier post to my local area list includes (1) the dispatch is only heard, (2) one DL return came back to Waco, and (3) 4400 Harrison at the La Vega (Apartments I thought but now I'm guessing school) was the address of an EMS auto/ped call. Doing a little research on t5he address and name came up with this link (http://realestate.yahoo.com/Texas/Waco/Schools/result.html?type= <http://realestate.yahoo.com/Texas/Waco/Schools/result.html?type=&p=Waco%2C%20TX&district=&ndistricts=&radius=0&level=&sort=type%201&b=10> &p=Waco%2C%20TX&district=&ndistricts=&radius=0&level=&sort=type%201&b=10) for the Waco area. The user of the 100.0 PL tone is a law enforcement user primarily and I'm not sure if the EMS call was a message to law enforcement units or if they also dispatch the EMS/FD stuff too?

Can anyone on the CenTexComm group help me confirm this user (or the 123.0 PL tone user too)? I appreciate any information.

Here's my original DFWScan post earlier:

****
****

I've been trying to confirm who uses 155.100 MHz with a PL of 100.0 for over a year. I don't usually hear this agency too often but I am tonight. I have cross-referenced RR.com data with the FCC database and my own PL tone database too. Here's what I have confirmed through the years in Texas myself on 155.100. There's no doubt some of this data is going to be outdated and old I'm sure! Actually, I just deleted a few entries I know are no longer good.

Cute & Paste:

155.1000 Angleton PD/EMS [Dispatch]

155.1000 Bastrop Co. SO Ch. 2

155.1000 Bastrop PD Ch. 2

155.1000 Burnet Co. SO [City Dispatch]

155.1000 Claude [Public Works]

155.1000 Hays Co. SO

155.1000 Navarro Co. SO

155.1000 Palo Pinto Co. Civil Defense/EOC

155.1000 Tyler ISD [buses/schools]

155.1000 White Settlement FD/EMS Ch. 01

155.1000 Wichita Co. [County Commissioners] [WQH459]

And here's what I have PL tone wise

Cut & Paste:

155.1000 100.0 ?

155.1000 123.0 ?

155.1000 156.7 White Settlement FD/EMS Ch. 01

155.1000 82.5 Navarro Co. SO

155.1000 103.5 Venus ISD

155.1000 162.2 Palo Pinto Co. EOC/Civil Defense

No telling if this cut & paste data will turn out looking right when this hits the group. I think it will and hope it does.

There's also another user (I'm not hearing tonight) on the frequency I haven't tracked down that uses the PL tone 123.0.

Does anyone know who either user (the 100.0 or 123.0 users) may be?

Thanks.

From: commscan
Topic: 3795 Message: 3796

While I still do not know who this user is because they aren't listed on the FCC database website and they aren't on RR.com, they most definitely are a PS agency that would respond to 4400 Harrison @ La Vega Primary School (just like the previous URL indicates) in the Waco/McClellan County area.

After listening back to the short recording I made, "La Vega Primary School" was undoubtedly the name used for the EMS call on the auto/ped call. I just cannot find any sort of listing for who the user may be. I'm guessing they're unlicensed?

So if anyone can fill in the blanks, it'd still be greatly appreciated...

ETMC EMS out of Navarro County (Corsicana) might use 155.10 via Navarro public safety frequencies... if one of those units got bumped to help cover something in Waco, perhaps they were still on an old frequency.

3798. RE: [CenTexComm] 155.100 PL 100.0

Yahoo group: CenTexComm
Date: 2009-04-07 12:20:46 UTC
From: commscan
Topic: 3795 Message: 3798

Thanks Mike. Yes, this one has me wondering. I'm guessing that whoever the user is, they are small in agency size and area of coverage. Since it appears the dispatch is the only transmitter putting out enough watts or possibly using a repeater, and the units do not, I'm guessing they're a small, unlicensed agency. I'm sure if anyone around the Waco area gives the frequency and PL tone a try they'll be able to confirm its user. They seem to be busy enough but mostly with law enforcement traffic.

I believe Bellmeade is the closest city to the school named and where the FD/Medic was being sent to. I'm guessing Bellmeade is one of the old VHF-Hi users on the old SO channel. I need to look again.

Thanks for the help again Mike and if anyone ever does get a confirmed user on this frequency, please post it.

Brian
Ft. Worth, TX

ETMC EMS out of Navarro County (Corsicana) might use 155.10 via Navarro public safety frequencies... if one of those units got bumped to help cover something in Waco, perhaps they were still on an old frequency.

3799. New to radio scanning

Yahoo group: CenTexComm
Date: 2009-04-10 18:32:45 UTC
From: bradfordod
Topic: 3799 Message: 3799

Hello,

I recently just purchased a scanner the other day from radioshack for a little local police entertainment and I have to admit I am very disappointed as I can't seam to receive any fun stations (aka Austin police/fire/ems). I purchased a triple tracking scanner that wasn't all that cheep, so I assume that it is capable of picking up these stations and I'm at fault here. Could some one give me some pointers?

Thanks
-Brad

Specifically which model scanner do you have? Austin/Travis
County/Williamson County use a digital trunked system and not all
scanners can hear this system.

Welcome to the hobby!

John,

I purchased the Radioshack Pro-163. You can view it on their website.

Unfortunately the Pro-163 isn't going to work around here. Radio Shack should've known better. You will need a digital trunk tracking scanner.

Pro-106
Pro-197
Uniden BCD396T
Uniden BCD396XT
Uniden BCD996T

Will all work.

Here's a thread about it from QRZ.com
http://199.245.125.6/showthread.php?t=28106&page=2
Still doesn't really answer the question though.

3812. Fwd: Goodbye to Analog

Yahoo group: CenTexComm
Date: 2009-04-16 01:14:24 UTC
From: John Mayson
Topic: 3812 Message: 3812

For the sentimental among you...

Goodbye to Analog

Tonight, one minute after midnight, KLRU will cease analog transmission. Our chief engineer David Kuipers has the honor of ending the analog signal and as a tribute to the station’s history he will air KLRU’s original sign-off.

Before stations were broadcasting around the clock they were required to “sign off” before ending the broadcast day. These were often patriotic images put to the music of the Star Spangled Banner. The KLRN/KLRU sign-off is no exception and it will be a trip down memory lane for many of our staff. David will air the sign-off on its original 2” tape, eschewing our fancy digital technology one last time.

Hey there,

Well i just bought and received a Uniden BCD996T. A lot more expensive then i was originally hopping to get into the hobby with but none the less I'm excited. This scanner appears to be 100x more confusing to use then the last one. (oh and by the way radio shack told me that i was just using the scanner wrong and that they have sold many of the same type with much success... liars) I have not had enough time to really dive in yet, but it seams to me that I'm not receiving strong signals. (i live downtown, i assumed there would be a lot going on) The scanner already has the Austin PD channels programmed into it and there isn't a lot of talk on them and what I do receive is cut short. Anyway I wanted to thank you for your help.

I've never used the 996. I live over towards Lakeline Mall and hear Austin just fine on my 296. Maybe someone who owns a 996 could chime in.

I once had a Radio Shack employee tell me an antenna was useless for a scanner because antennas were for transmitting and not receiving. That's what you're up against.

Back where I used to live, I was in a RS when three guys came in wanting some walkie-talkies. The guy working there seemed to have a good head on his shoulders and showed off his assortment of two-way radios. The head guy finally said something along the lines of "We ain't stupid you know. We need three-way radios, there ain't just two of us."

I caught his eye and it was all we could do from bursting out laughing.

---------- Forwarded message ----------
From: Uniden Webmaster <twiki_webmaster@...>
Date: Mon, May 4, 2009 at 15:38
Subject: TWiki UnidenMan4.WhatsNew

If you are having trouble viewing this email, or want to see past news
updates, go to the web version at What's New.

News for May 4,2009

Today Uniden is announcing two new scanner models: The BCD996XT and
BCT15X base / mobile scanners bring the latest improvements to
Uniden's core scanner platform to the mobile scanner audience.

Complete details about these scanners will soon be available covered
in our main Scanner Manuals site, but here are some of the features
added to the new models:

More memory

BCD996XT: 25,000 channels
BCT15X: 9,000 channels

Fully automatic P25 decoding (BCD996XT only)
Enhanced GPS compatibility -- controls the scanning of groups of
channels within systems.
More channels per system -- up to 500 channels per trunked system.
Channel Number Tagging -- lets you quickly select a channel for monitoring.
Fire Tone-Out Search -- helps to identify the tones used on fire
paging dispatch channels.
Band Scope -- provides a visual representation of activity within a
selected frequency range to help quickly identify active frequencies
or sources of interference.
Multi-Color Display Backlight (BCD996XT only) -- lets you have the
scanner alert you to particular channel activity using specific
colors.
NAC Decoding -- lets you lelect specific NAC codes to limit reception

to only the desired agency. (BCD996XT only)
Individual Channel Volume Offset -- helps to compensate for agencies
that over- or under-modulate consistently.
Priority ID scan for trunked systems -- assigns preference to priority
channels when evaluating incoming channel grants.
Preemptive Priority for Motorola Systems -- jumps to a priority
channel even if the scanner is on a differerent voice communication on
the system (requires compatible system-side priority assignments).

And more...

Availability for both models is expected late Summer, 2009.

In a week or so I'll have all the details for all the new features as
well as in-depth instructions posted at Scanner Manuals. I'm
continuously adding more material to this site...the update for these
scanners involves literally hundreds of changes to the site, including
both adding information about the new models and enhancing information
available for the BCD396XT and BC246XT. I'll drop you another note
when the new pages go live.

3834. ? BCD396T Choppy Reception

Yahoo group: CenTexComm
Date: 2009-05-24 02:13:20 UTC
From: Phil
Topic: 3834 Message: 3834

Hey Folks,

I bit the bullet and purchased a BCD396T today. I copied the freq files from the files section on this Yahoo! Group (Thanks!) and uploaded to the scanner using the Freescan freeware scanner control software. It's good software - I like it.

Anyway, so the reception seems choppy to me. I can pick up EMS, Fire, Police, but reception cuts in and out during transmissions. I tried messing with the P25 settings but to no avail.

Any ideas?

Cheers,
Phil

I had the Weather Alert turned on, and I *think* it was breaking transmission reception to check the channels. I went and tested the scanner out at ABIA this morning and figured out that the even the aviation reception was suffering the same as the P25 stuff. Anyway, I messed with different settings out there and when I turned off the WX alert checking, I got nice, clean reception. Went back to the emergency services channels and viola - all good!

Quite happy with the scanner. I've had an Icom IC-R10 for years which is a nice unit, but have missed the police action since they went digital on us. It's good fun to hear it all again. Still learning the ropes with the BCD396T, and am having fun using it with Freescan right now.

Cheers,
Phil

Yeah, that'll do it. I also once had trunked and conventional
frequencies in the same bank and one of the conventional was set to
priority. That screwed things up.

I'm still using my 296D. Uniden is getting as crazy as Apple with
their iPods it seems, new scanner every time I blink.

Yep, having jumped back into the scanner market it was stunning to see:
a. The range of scanners overall (but lack of APCO25 capable units, seems fairly limited)
b. The new features

With respect to b., I can't believe how easy it has been to set up my new Bearcat. Basically copy and paste freqs in through software. Brilliant stuff.

Thanks for the feedback.

Cheers,
Phil

Topic: 3841 Message: 3842

I'd recommend the Uniden BCD396XT (the newest handheld model) or the BCD996XT (the newest base/mounted mobile model). On average, you're looking at about a $485 - $525 cost. And don't look at Radio Shack for these models. The still excellent, but now last year's version models (BCD396T/BCD996T...not the "XT" new models) go for $600 at Radio Shack. That is outright crazy pricing and they don't even have the scanners in stock. Personally, I use The Ham Station (easy to find on the web) for my purchases because they are (in my book) # 1 in customer service and care and are priced very competitively.

There are way too many reasons for me to mention (features, quality, etc) why I prefer the Uniden scanners. Every APCO 25 capable scanner will have something another doesn't, but in the overall "complete package" picture, the Uniden models blow away all competition. Uniden models allow the user to store their data (frequencies, alpha tags, settings, etc) in a way where no extra space is lost. They use what is referred to as Dynamic Memory and can be best compared to a PC hard drive with folders when it comes to storing information for scanning. Uniden has useful features too, and plenty of them. Instead of having a bunch of junk you really don't need or might never really use, the Uniden models have awesome tools (features the radio includes) for using the scanner in a variety of ways.

One other plus is the Uniden scanners come with the AC adapter, PC cable, and free (on almost all models) software. The competition doesn't offer this. You can easily rack up another $75 - $100 just for these needed "accessories" with the competitive brand(s). Also, the Uniden software allows you to do more than just program the scanner. The Uniden scanners are PC controllable too. The competition, once you buy the needed cable and software (each sold separately), only allow the user to program their scanner or read the data on it. It's not PC controllable too.

Now, like I said, there are really too many reasons I pick Uniden over GRE, Radio Shack, or any other manufacture. The biggest reasons are quality, features (so much more is offered), and excellent customer service.

This is just my opinion, so please, no flame throwers in support of any other models :) If someone else disagrees with me, tell the group why you think another model may be a better choice.

I hope this is of some help...

Brian

3845. Austin Comments

Yahoo group: CenTexComm
Date: 2009-06-16 02:42:29 UTC
From: Gary Saffer
Topic: 3845 Message: 3845

I just returned home from a weekend trip to Austin. I was staying in north Austin and while listening to the trunk system I noticed far more public safety activity on Site 1 than Site 2. I read the post back in December (I think) about this and my observations agree with that post.

I also saw the new APD paint scheme and it sure does look generic. Until I was close enough to see the name on the shield on the door, I had no idea who it was. Very strange.

I noticed a lot of APD units on the I-35 and only one DPS unit. I couldn't figure out what talk group they were using, can anyone help?

Thanks.

I still hear DPS on VHF. Anyone heard anything about their future in Austin?

John

That's pretty funny. Or an actor with a patch that says "City Police" on it.

Sorry, I was unclear on that. I meant which TG APD uses, not DPS.

Ironically, the new APD chief said he wanted that paint scheme so that the cars would be more recognizable. If that is true, why would they go from the great big lettering to the itty bitty lettering? Maybe its more recognizable to him since he came from the California Highway Patrol. ;)

> I noticed a lot of APD units on the I-35 and only one DPS unit. I couldn't figure out what talk group they were using, can anyone help?

My guess would be one of these:

993 3e1 D AusPD STEP 1 APD STEP 1 (Traffic Enforcement) Law Tac
994 3e2 D AusPD STEP 2 APD STEP 2 (Traffic Enforcement) Law Tac
995 3e3 D AusPD STEP 3 APD STEP 3 (Traffic Enforcement) Law Tac
996 3e4 D AusPD L & W APD License & Weight Law Tac

3849. Excellent Skip/Ducting Today

From: commscan
Topic: 3849 Message: 3849

Hi All,

Here in the Dallas/Fort Worth area where I am, and I'm sure all over the Austin and other areas too, there is some excellent reception today. There has been for the past 4+ days. But today is extra good. I'm receiving stations as far south as the Corpus Christi area (and I'm sure farther but I don not know Spanish). I'm listening right now to Liberty County SO on 155.835/PL 146.2 and they sound like they are a local agency.

So if you enjoy DX'ing (long range receiving/transmitting), today is one of the best for it that I've seen in many years.

I just thought I'd post a heads up for anyone interested.

Brian

3850. Austin Police and DPS Traffic

Yahoo group: CenTexComm
Date: 2009-06-16 14:53:46 UTC
From: robert
Topic: 3849 Message: 3850

During peak rush hours; Austin PD is running all traffic "hot shot" calls on Adam radio. (the least busiest)

These are all calls on major roadways. (I35 and MoPac) The traffic talkgroup is prob not being used.

DPS uses both their talkgroups and the VHF 155.4675/154.6875

The DPS dispatcher will respond to them on whatever radio they called in on. I have no idea why some are in one place and some in another place; perhaps only some of the cars have the radios and some don't or some prefer it and some don't.

The Austin System has a lot of talkgroups but understand that a lot of them are NOT being used. This would be very confusing for visitors who just look at the system for the first time and try to program all the talkgroups and wonder why they are not hearing anything.. For instance. Travis County Sheriff only dispatches on Adam and Baker and Charlie and David are not used as dispatch talkgroups but more as tac channels. Aviation Police is sometimes on talkgroup 1043 and sometimes not. I'm told they are the "John" sector now.

There have been some posts about buying radios locally. Unfortunately, unless Radio Shack is having a sale, most of the best prices can be obtained through mail order outfits such has Hobby Radio Stop http://www.bearcat1.com/Bearcat/Home.htm

There are many others. I don't know of a lot of local places that sell the Uniden scanners. I know Fry's sells a few but they are at the manufacturer's suggested retail price and not discounted at all.

APD and Travis County are offering an email list to keep updated on major crimes. These can be emailed or sent to your cell phone. Check out http://citizenobserver.com/cov6/app/index.html

To get signed up.

Thanks. Looking at the sector map I can wee why Adam is the quietest channel, although logically I would have thought they might use Baker since both MoPac and I35 run through it.
>
> DPS uses both their talkgroups and the VHF 155.4675/154.6875

Is this the 700 Mhz system that some message referred to? I only had VHF programmed in because I didn't know about the 700 Mhz system. I don't know if I'll get back down to the Austin area until next year, but I expect not.

I generally take the shot gun approach and program in everything that looks interesting if I'm going to an area where I don't know the radio system.

Thanks for the information.

3852. RE: [CenTexComm] Austin Police and DPS Traffic

Yahoo group: CenTexComm
Date: 2009-06-16 21:05:51 UTC
From: robert
Topic: 3849 Message: 3852

The talkgroups used by DPS on the Austin System are:

3522 dc2 D DPS 1 Disp Texas DPS Dispatch

3523 dc3 D DPS 2 Talk Texas DPS Car to Car

3525 dc5 D DPS AUSTIN Austin Highway Patrol Dispatch

3526 dc6 D DPS CAP PD Capitol Police Division - on 700 Mhz

3527 dc7 D DPS CAP SECU Capitol Fire and Safety (building security) - on 700 Mhz

3530 dca D DPS CAP PARK Capital Fire and Safety (parking) - on 700 Mhz

3538 dd2 D DPS FLEET DPS Austin Fleet Operations

I think only the Capitol Division police and security around Capitol and state Buildings is using the 700 Mhz.

The actual troopers are on the regular 800 towers.

See: http://www.radioreference.com/apps/db/?sid=2 <http://www.radioreference.com/apps/db/?sid=2&opt=all_tg#tgs> &opt=all_tg#tgs

I mostly just listen to the talkgroups in the open mode and just lock out the ones that I do not want to hear. That is the best way to do it.

Thanks. I was mostly looking in the wrong place on the RR page. It's
much better when you can talk to someone who knows what is actually used.

3854. Uniden BC796D

Yahoo group: CenTexComm
Date: 2009-06-17 07:26:49 UTC
From: christopher_breed
Topic: 3854 Message: 3854

Programming help please !

I've owned my 796D for about 3 yrs and have never had the time or I guess patience to program and understand trunking etc.

I pretty knowledgeable of most anything electronic. Home automation, wiring, networking, C-band satellite, phone system installation, 7.1 surround sound, vehicle navigation/DVD system, slingbox, mobile slingbox, blackberry, Apple TV, iPhone etc etc...

I am a native Austinite. I grew up listening to Aviation 121.0 and APD Baker sector 460.450 ? and Capitol police 460.075 ?

I live in Northern Hays County (Dripping Springs). I work in Austin.

I am needing to possibly hire someone to program the banks of my 796D so I could monitor aviation , approach, tower etc (I work part-time for American Airlines at the airport), APD Central, NW, SW, DPS, Hays County Sheriff.

I did have the software to control/program the 796D but I think I'll need to repurchase, as it was on a computer I no longer have.

Is there anyone in the area that could help with this ? Meet ? Drop it off ?

I'm all over central, west and north central austin and commute 290 W and to the airport daily.

Let me know if you can help.

Thanks,
Christopher

I was in your situation several years ago when I purchased my first trunking scanner. A couple suggestions.

1) Use the expertise on this Yahoo group and www.radioreference.com. Ask questions and you will get well-thought out answers.

2) Don't have someone else program your scanner. Half of the fun is stumbling through the process of figuring out how these things work. Believe me, there was no one less knowledgeable than me when I started out.

I also live in Northern Hays County, and might be able to offer a little insight into the process.

Hi John & Group,

I did try the VHF-Lo band a few days too but wasn't having any luck. I don't know if it was just not opened up or if there just weren't many users to catch. I really love catching those real far out states which are seldom (if ever for many) caught in the BHF-Hi range.

BTW, I don't know if this is correct or not, but someone recently told me that Oklahoma is not really using the trunk systems yet for their Highway patrol. They said that Oklahoma was still using the VHF-Lo band for at least now. I know Missouri can still be caught on the Lo band but I don't even remember if Oklahoma used Lo band frequencies???

What I meant to say at the end of the typo paragraph below was "...caught in the VHF-Lo range". I really messed that one up :)

I saw your reply John and I'm going to do a little checking if we have any openings in the VHF-Lo band one morning soon. It'd be nice to occasionally catch the OHP.

I'm off to bed now...I'll see everyone later...

3858. Slightly O/T - new DTV offerings

Yahoo group: CenTexComm
Date: 2009-06-21 14:57:41 UTC
From: Bruce Sawtelle
Topic: 3858 Message: 3858

Hi

I did a re-scan on my DTV converter and ran across 2 KNCT stations that are coming in very strong in NW Austin from Killeen (46-1,2) for those interested.
I was wondering if anyone knows of a group/blog that is tracking new stations as they go live. Didn't see a DTV-specific Yahoo group to get this info.

Thanks
Bruce

That's the Waco market's PBS station. Being near Fort Hood (I guess) they run a lot of military history programs and such on their main channel. Their sub-channel is Pentagon TV which is interesting.

We can certainly track the Austin-area offerings here.

Thanks John
Yeah, I like the Pentagon channel, something new over the hum-drum on the regular affiliates.(I have cable too but not in the radio room. I watch the Military channel occasionally just for something different.

Thanks Myles,
Unfortunately, it's rather outdated. We're up to 14 DTV channel now in Austin with the addition of the 2 Killeen stations. I saw 7-2 about a month ago, but haven't seen it since. It was a "clone" of 7-1 from Fox

I also see 18-3 is going to change names from KLRU2 to KLRU-Q(uestion)?? ??

Was hoping someone at FCC would be tracking this on a web site. Guess I'll just keep the periodic scanning.

Thanks again!
Bruce

3862. FS: Uniden 396t

Yahoo group: CenTexComm
Date: 2009-06-25 04:21:17 UTC
From: Sly
Topic: 3862 Message: 3862

Hey all:
I thought I'd give some of the local/regional groups an offer first before I move onto the national lists.
I am selling my Uniden 396T digital scanner. It is clean and in perfect working order.I would give it an 8/10 on condition of the exterior, a little wear on the side grips and only a couple very small dings on the case. No scratches on the screen or letter wear.
I have the original box, all originally included paperwork and the manual, stock antenna, orig sma to bnc adapter, programming cable, orig AC wall charger, detachable swivel belt clip and rechargeable batts. The uasd programming software is avail at Uniden for download. It did not come with the radio (even when I bought it new).
I will also throw in the Radio Shack 800mhz antenna for better 800 performance.
Unit has 3.01.00 firmware installed.

FYI- I am in Bryan, TX. If you are interested I can meet you somewhere approx halfway (depending on where you are)(night/weekend only) or if you want it sooner you'll need to drive here to pick up. I can also ship as well (included).

I am selling because I recently got the xt version and don't need two similar scanners

$350

E-mail me directly if interested. Please respond within a few days as I will move on if no takers.
kapchinskipc(at)verizon(dot)net
Thx, Sly

Hi.. My Rigblaster PnP CD has disappeared and you can't download the .iso or anything but the driver.. Does anyone have a "newer" cd they could make an .iso for me or something like that.. The newest version is ver 8, but I'm not sure what version I had before.. They want 20 bucks for their cd that has a bunch of free/shareware software on it.. go figure..

Thanks!

3870. Hudson Bend Fire Station On General Williamson Dr keeps catching on fire

Yahoo group: CenTexComm
Date: 2009-08-06 19:28:57 UTC
From: robert
Topic: 3870 Message: 3870

Does anyone know why the Hudson Bend Fire Station On General Williamson Dr keeps
catching on fire? It's making the national news now.

Texas Firehouse Catches Fire, Twice in One Week
A fire station in Lake Travis, Texas, is in an odd predicament. Firefighters have had to battle two fires at the same address, their own firehouse, in one
week.

3878. Radio Shack Pro-106 on sale $379.99 and sale on AA Lithium

Yahoo group: CenTexComm
Date: 2009-08-31 13:55:23 UTC
From: robert
Topic: 3878 Message: 3878

Radio Shack's newest latest and greatest handheld scanner the Pro-106 is currently on sale for $120 off

At $379.99 until 9/05/09

<http://www.radioshack.com/product/index.jsp?productId=3348287>

Also Walgreens has a special on Energizer AA rechargeable batteries

4 pack Ultimate or Advanced Lithium AA is $7.99 and I found a coupon attached to the package for another $1 off.

So $6.99 for 4 rechargeable Lithium batteries is pretty decent they are 2450mah so they last long.

3882. TXDPS Sitrep for flooding

Yahoo group: CenTexComm
Date: 2009-09-12 15:42:29 UTC
From: Myles Barkman
Topic: 3882 Message: 3882

Check out this Situation Report for the ongoing flooding potential in
Central Texas.
ftp://ftp.txdps.state.tx.us/dem/sitrep/Heavy%20Rainfall%20Event%20SITREP%202%20091109.pdf
Resources are committed if needed for rescues.
Bell County, in particular, Salado appears the hardest hit yesterday. The
Main Street bridge over Salado Creek was washed out.
FM 437 in Milam county is flooded at Donahue Creek (between Val Verde and
Rogers).
Parts of I-35 were closed yesterday due to flooding.
Threat moving north into North Central Texas/Southern Oklahoma, especially
north of I-20.
Some flooding already occurring around Altus Oklahoma.
See heavy rains leaving southern Tarrant County after they got hit again
last night.

At least fire potential should go down except for lightning and outflow
winds.

Here in Houston area, not so bad yet but rains are coming and may get a
flash flood watch.

Well, we needed the rain.

3883. Friday Night Lights - active radio traffic for high school football games.

Yahoo group: CenTexComm
Date: 2009-09-19 01:11:20 UTC
From: Robert Barker
Topic: 3883 Message: 3883

Some very interesting listening tonight. A lot of high school football games are being played and many schools have radios on the Austin Trunked System. Pflugerville HS is non stop on talkgroup 3186. It seems like they would have some direct simplex channels to use but apparently they do not. So all traffic is broadcast all over the city.

3884. City of Waco

3889. Unknown Freq

Yahoo group: CenTexComm
Date: 2009-10-14 01:50:28 UTC
From: Pryce
Topic: 3889 Message: 3889

I was driving around Austin today monitoring on my scanners and with my 2M HT.

I caught one side of comms on 158.3125 with my HT, couldn't get it with my scanner. No tone and all in the clear.

It was an obvious training exercise as it was annouced every few minutes.

Does anyone know who/what this was I was picking up?

Thanks,

Pryce Marshall
Bryan, TX

3890. 158.3125

Yahoo group: CenTexComm

From: trebor1159
Topic: 3889 Message: 3890

According to the FCC this is not a valid frequency.
It could be 158.31 or 158.3175

you said training exercise. Was it law enforcement or medical related or something else?

158.3175 is an Austin company that seems to do testing equipment or something but not related to any sort of training exercises that I could think of.

It could be an image given he heard it on his HT but not his scanner?

3894. Plain Talk Eases Police Radio Codes Off The Air

Yahoo group: CenTexComm
Date: 2009-10-15 01:33:59 UTC
From: John Mayson
Topic: 3894 Message: 3894

http://www.npr.org/templates/story/story.php?storyId=113738105

Police radio can sound like an algebra class, with all those 10-4s and 187s.

But more and more departments are trying a radical approach: asking officers who need backup or want to report a robbery to do so in plain old English.

Late one night in 2005, a police officer on a dark highway in Independence, Mo., radioed in that he had just passed a State Highway Patrol officer's car on the side of a road with the door open.

The dispatcher confirmed his message and said she'd ask highway patrol about it. But something about the patrol car bothered the officer. He changed his mind.

"We're going to start heading back that way just in case, advise us if he's ... if you get word that he's 10-19," the officer said.

He wanted to know if the trooper was 10-19 — code for just fine, out on a call. But this state trooper was not 10-19; he was laying 20 feet away in a ditch, barely alive, shot eight times by a rifle.

This is how the dispatcher relayed that information to the State Highway Patrol: "They have a trooper in the ditch, they are ordering the ambulance, they are also trying to get Life Flight."

That's because 10-33, 10-52, GSW doesn't mean officer down, send an ambulance, multiple gunshot wounds, to the Missouri Highway Patrol. To the highway patrol, 10-33 is a traffic backup.

Because the dispatcher switched to plain English, every state trooper for 50 miles came running. The officer lived, and the suspect was caught in less than an hour.

The Push To Plain English

"In the case of a large-scale disaster, we all have to be able to go on the radio and talk to each other," says Mike Williams, assistant chief of the Chattanooga Police Department in Tennessee. His agency was on the forefront of the switch to plain talk a couple years ago, when officials realized that local agencies couldn't communicate during tornadoes and floods.

"You had 10 different radio systems, and everybody had different codes," Williams says. "It was a nightmare."

Coded police talk came about during the 1920s and '30s, when radio channels were scarce. Officers needed to get on and off the air quickly. They created what are called 10 codes, and then later signal codes. Police also thought the codes would keep things less public. But Williams says that even with different local versions, that's always been wishful thinking.

"The codes are no secret. They've been around for as long as I've been doing this, and the public pretty much knows," he says.

The real push to plain English came after Sept. 11, followed by Hurricane Katrina, when dozens of neighboring police responded to New York City, Washington, D.C., and New Orleans only to be met by utter confusion on the radio. Three years ago, the Department of Homeland Security asked police agencies to voluntarily make the switch. Many departments, such as Midwest City, Okla., have switched.

"We always say tradition is the biggest roadblock to progress, and I think it's tradition in law enforcement," says Brandon Clabes, chief of the Midwest City Police Department. Instead of saying there's a 417, officers now just say there's a man with a gun inside the 7-Eleven store.

It's been so successful, Clabes now asks his officers to write reports in plain English and talk off air in plain English, too.

"I exited my police car, or the suspects fled on foot — you know I got out of my car. I made entry. OK, I walked in the front door. It's just a simple thing," he explains.

A Barking 10-11

Police radio codes were popularized in the 1970s and '80s by cop shows on TV, such as: What's your 20? — as in 10-20, your location; he's 5150 — a mental patient; rap music is full of 187s, which are homicides.

Some departments that still use the codes take it to the extreme. It's not uncommon to hear a dispatcher say a caller is complaining about a barking 10-11.

In departments that use plain English, though, officers say there is a sense that some privacy has been lost. But most have found a work-around.

A few months ago on the streets of Washington, D.C., a police commander asks if an officer is able to talk openly.

The officer pauses.

"Um, just to give you a heads-up, I have a reporter with me who's on a ride-along," he says.

The two men quickly ditch the radio and turn to the latest in police telecommunications: cell phones.

3901. Career Paths

Yahoo group: CenTexComm
Date: 2009-10-26 21:50:54 UTC
From: Pryce
Topic: 3901 Message: 3901

This may be a different sort of message post, and I hope that it does not stray to far off topic. I am sending this out to a few select lists that I belong to so I apologize if you receive it multiple times.

I am in a bit of a transition time in my life; I am finishing my undergraduate degree at Texas A&M this December. My degree is in Rangeland Ecology and Management which basically boils down to Natural Resource Management. I have become fascinated with communications; it started as just listening to public service communication and now I am studying for my Technician license so I can get into amateur communication. I am really thinking that I may want to pursue a career path that involves communication; more on the sales/service side of things.

What sort of career paths are available for someone without a degree or any formal coursework in engineering and communications? I have good personal communication skills; I can strike up a conversation with just about anyone, and I have experience in commission retail sales.

Any guidance or suggestions or even ideas of what I should "Google" search for would be appreciated.

Thank you!
Pryce R. Marshall
Bryan, TX

From: John Mayson
Topic: 3901 Message: 3902

I am 40 and I graduated from college in the early 1990's, during that recession. I was set to interview with Motorola in the Atlanta-area and part of my job would've been supporting the local systems and helping with the communication needs for the 1996 Olympics. Totally awesome! But thanks to the recession there was a hiring freeze, etc.

The big players these days are Motorola and now Harris Corp. which acquired the EDACS system from whoever owned them last (I have totally lost track). You could try hiring on with them. But given the low volume of the business and the fact we're in the thick of a nasty recession, I don't know how successful you would be. Sorry, not trying to burst your bubble. I'm just being honest. :-)

You could also look for jobs with various city, county, state, regional, and federal agencies, but I would think many of the entry-level jobs would be technician level. I'm not sure what you're looking for. Another area where you would at least gain experience with mobile communication would be the cell phone companies as a field technician or engineer. Not exactly the same thing, but not that different either.

Good luck and I hope this gets you pointed in the right direction.

From: John Mayson
Topic: 3903 Message: 3903

A lot of scanner listeners enjoy keeping on top of breaking news stories from around the country. With services like ScanAmerica.us it's easy to monitor situations where ever they occur. I listened to the "balloon boy" saga via my iPod Touch as it was happening.

With this in mind I'd like to invite you to join Disaster Watch http://groups.yahoo.com/group/disasterwatch/ and the associated discussion group http://groups.yahoo.com/group/disasterwatch_discussion/. I am one of the co-moderators.

They're both fairly low traffic until something breaks (such as the current situation in Shreveport).

To: houstonscan list <HoustonScan@yahoogroups.com>

Just heard that the special show is canceled for tomorrow due to
complications with weather.
Still calling for rain in the morning and with grounds already soaked, could
be a real mess trying to move kids around with special needs. Airshows are
just not that much fun with low ceilings and rain.
Don't know if I'll be able to verify anything like Airboss if nothing is
going on.
Blue Angels still supposed to do a practice run around 3pm so that is
something.
Bummer for the kids and bummer for me.
The special show is good practice for the hams too before the big weekend so
they will be without that.

At least the weather will be very nice for the weekend!

This will be a fine service, John, but the radio listings will need to be frequently revised if you mean to keep their program formats up to date. AM seems to be in constant flux (I don't know how they stay in business at all) & FM programming is only somewhat more stable. Then there is HD Radio - maybe. I'm not really sure it exists, or why.
Anyway, thanks for embarking on this challenging mission.

And given I almost never listen to the radio, it'll be a challenge. :-)

I'm too far south to hear anything on my scanner.

This is, of course, Bell County. Last I knew Fort Hood was on the
former TXU TRS (forget who owns it now). Some of Bell County is on
ScanAmerica.us, but none of the traffic pertains to this incident.
All I heard was Temple PD discussing a guy who stiffed a cabbie of his
fare.

I also listened to McLennan County (Waco) but heard nothing related to
the incident. That was a long shot given the distance between the
two.

If anyone hears of a good source be it online or on the scanner, pass it along.

Topic: 3909 Message: 3913

Thanks John,

I'm hearing most all of the media (DFW) communications and LifeStar 4 & 5 at times up here in Fort Worth. LifeStar 4 sounds like they're heading back and are 43 minutes out of the DFW area right now. I'm monitoring the old TXY/Encore TRS Ft. Hood TGs, but nobody up here is affiliated if they are still using the TRS. I know Ft. Hood has a 380 MHz TRS too. I believe it is their primary TRS nowadays.

Thanks for the info John. Let's hope the death toll doesn't rise above 12...

Brian

3921. AFD communications time statistics... blame it on BassMasters or Locution ..you decide discuss??

Yahoo group: CenTexComm
Date: 2009-11-15 00:43:38 UTC
From: Robert Barker
Topic: 3921 Message: 3921

This is some interesting information posted by Mike Levy who is outspoken about city services regarding AFD response times.
I have heard both sides of this on the scanner. There was a time when AFD would page out a call and you would commonly hear "EMS unit not yet assigned" meaning they didn't have enough units available and they would have to hold calls.

Now with the new CAD system The fire dispatch is automated computer voice that dispatches calls too slowly.
I am not sure how much the dispatchers are involved and they are much more busier than they used to be but there was a time when they would all be watching "Bass Masters" on TV (you could hear it in the background when they dispatched the call) and not always notice an incoming call and be slow to dispatch it. It seems like everyone wants to blame everyone else but I am not in favor of the automated computer voice dispatching.

-------- Original Message --------
Subject: AFD communications time statistics...This is such blatant BS & spin control at its very worst
From: Michael Levy

Re: the attachment on AFD dispatch processing times and spin control at its very worst.

This is such blatant BS and spin control at its very worst.

CAD gives a box alarm to the A/TCEMS communications dispatcher as soon as the AFD call-taker hits commit, and the A/TCEMS immediately dispatches a unit.

Two minutes may be go by before the AFD Locution goes out to fire apparatus to respond to the same incident.

One Saturday afternoon I came up to the stop sign at Balcones and Perry Lane, ready to turn left to head toward my home. But EMS dispatched a unit on a box alarm. Because of the location, I knew that Quint 19 coming from the station on Balcones south of 2222 would eventually be one of the responding units. So I turned right, heading at the posted speed limit towards that station. I got caught for a few seconds at the light at Balcones and Hancock. Then I parked in the church lot directly across from the station. Finally the AFD Locution of the alarm went out, and the crews scrambled to their rig and were off.

Joint use stations that have both AFD apparatus and an EMS unit have been very much aware of this delay.

The City of Austin Public Safety Task Force was told by APD officials who manage the 911 call center that because of an inadequate number of 911 call takers who ask a caller, ?911, what is your emergency? before sending a call the EMS or Fire dispatcher, a caller may have to wait 60-90 seconds, listening to a tape recording, before getting a 911 call taker.

The attachment shows that once an AFD hears the need for a response to a fire, another 30 seconds may go by.

Then there is the two minute+ delay before Locution gets the alarm to the stations.

So we?re talking about maybe 4-6 minutes before wheels start to turn on AFD apparatus, and 3 to 7 minutes before the apparatus gets to the scene (assuming the location is not in the outer rings of the City).. With a working fire the mantra is that time is of the essence, not only in being able to ?get the wet stuff on the red stuff? to contain the fire but also to be able to have an opportunity to successfully rescue any occupants still in the structure.

Obviously the AFD communications machine compromises all of this more than quite significantly.

EMS communications got rid of Locution some time ago because of delays.

And if AFD wants to keep Locution, it could easily and immediately have a dispatcher verbally announce over the speakers of all stations the location of a new box alarm. AFD personnel know if an address is in their first alarm territory, and would get their wheels in motion without waiting for the Locution process to complete.

Finally, EMS response times are also significantly increased because an inadequate number of 911 call takers, as are APD units to emergency calls.

The attachment: is the city's explanation but it doesn't mention 2 things: 1) that the dispatcher may be watching TV and not paying attention 2) that the computer general voice takes too long to belt out the calls. this is worse if you try to add units to a call, such as an arson investigator. The system will re-dispatch the entire call.

AFD DISPATCH PROCESSING TIMES 2009 YTD

/Dispatch processing time is the elapsed time between the incident arriving in the dispatcher?s queue and unit(s) being assigned/

Seconds

Dispatch Processing time for all AFD incidents (62,732): 24

Dispatch Processing time for all AFD medical incidents (43,547): 22

Dispatch Processing time for all AFD Box Alarms (960): 37

Extra time required to dispatch a Box Alarm: 13

TYPICAL CALL FLOW

On a still alarm incident, the dispatcher opens the call, reads the comments and then hits the ?initial assign? button. A few seconds later, CAD returns a unit recommendation. The dispatcher accepts this recommendation by hitting the ?commit? button which assigns the unit in CAD and fires Locution in the station. This entire process takes 22-24 seconds.

All of these things also happen on a Box Alarm, but there are two differences that cause the processing time to be slightly longer- 13 seconds on average. First, after the dispatcher opens the call and reads the comments, he/she must check for the next available tactical set and change the talkgroup assigned to the incident. It has to be changed at this point in order for Locution to announce the correct talkgroup assignment during the alarm announcement at the station. The second difference is the amount of time it takes CAD to process the unit selections. It simply takes the system longer to select nine resources of four different types than it does to just pick one.

HOW CAD PICKS UNITS FOR A BOX ALARM

Units are picked in the following order. Note the considerations that must be made.

1. 2 Ladders Considerations: Can be a Ladder or a Quint

2. 4 Engines Considerations: Can be an Engine or a Quint not already picked

3. 1 Rescue

4. 2 BC?s

It takes less than 13 seconds longer for CAD to complete these steps and assign nine units than it takes to select a single still alarm unit because the task that CAD is performing on a Box Alarm assignment is exponentially more complex.

Wow, that should be nonstop action. :-P

Actually monitoring stores and restaurants is fun. I get the feeling 99% of their employees have no idea they can be monitored.

When I lived in Florida I had the zoo's frequencies in my scanner which I took to the zoo. A woman was talking into her radio and slowly looked over at me because her voice was coming out from under my shirt. :-)

Tallahassee Democrat (Florida)

December 11, 2009 Friday
TD Edition

Sunday Exclusive examines dispatch

BYLINE: By, Bob Gabordi

SECTION: LOCAL CONVERSATION; Pg. B1

LENGTH: 568 words

Executive Editor

I'm sitting at my desk writing as I listen in the background to emergency services in Washington, D.C., dispatch police to an incident in the northeast section of the district.

With little effort, I can switch to New Orleans, San Diego or Fort Myers. Occasionally, I'll listen in to what is happening in a small town in eastern Connecticut where I began my daily newspaper reporting career 30 years ago.

Emergency-service radio traffic in all of these places and dozens more around the country is live on the Internet in real time. In some places, there are options available to get scanner traffic sent to a cell phone or BlackBerry, in addition to being able to hear it the old-fashioned way over a relatively cheap scanner radio.

In Leon County, however, local governments have just invested millions of dollars in shutting the public out.

Our Sunday Print Exclusive story this week by reporter David Saez will address how the digital and encrypted radio system is different from the old system, where the money to pay for it came from and how it improves
communications among local agencies and serves the public.

It will also address the decline in public access to information from its government and whether communications could be improved without shutting the public out.

To be clear: No one is violating any Florida laws by taking scanner traffic out of the public space. Such communication is not covered by the state's progressive Sunshine Laws. Media lawyers and government-access advocates say that this is an issue that might have to be resolved at the legislative level.

And to be fair, efforts are being made to quickly provide much of the same information in text format to the media. In reality, some officials are going above and beyond what is required by the law, which is nothing at all. Frankly, I think it is just one of those things no one expected to come up when the laws were passed.

Still, my question is: Why shut out the public?

We always oppose it when government reduces citizens' access to what their government is doing, and this is a very significant step in the wrong direction for citizen access. This is not a matter of citizens being voyeuristic, but having a legitimate interest in public safety in their community.

It seems to me that the security issues some have raised about open-air or Internet scanner traffic are no higher in Tallahassee than in Washington, D.C. It just seems ironic to me that we are spending taxpayers' money to reduce taxpayers' access to their government's activities. Although I've asked, I have yet to hear a single good reason that explains why the public must be shut out to accomplish better communications.

We think this week's Print Exclusive raises important questions but also shines a light on the very positive aspects of the new dispatch system, as well. We hope you'll pick up a copy of the Sunday Tallahassee Democrat and then go to Tallahassee.com to debate the issues raised on the summary of the print story. You will also be able to purchase a single-copy e-edition of the Tallahassee Democrat at Tallahassee.com on Sunday.

Yep, that's the one...the "side channels" associated with FM radio stations that broadcast Musak, stock updates, continuous news, etc

Thinking about purchasing one of the Ramsey demod kits, but if there's no real action on the sub-channels in the Austin area, I'll save my money.

Definitely not SCA = "Swedish Committee for Afghanistan" :-)

Thanks
Bruce

If you have a scanner that you can tap the baseband audio with like you do to use Unitrunker, and you have a shortwave receiver cable of hearing down to near 50 kHz (and capable of FM down there), you can hear the SCA signals. Tune your scanner to the FM station you want, then connect your baseband tap to the antenna of your shortwave receiver. Think that is how I used to do it. Haven't played with that in a few years.
Common signals to look for are 57 kHz which is the RBDS data, 67 kHz, 92 kHz.

Here's some more info on the subject:
http://wapedia.mobi/en/Subsidiary_Communications_Authority

Last time I played around with it here in the Houston area, it wasn't all that interesting.
Heard some different language programming on a few stations. On the local PBS station, I heard HTBR, Houston Typing for the Blind Radio.

http://www.safeceiver.com/ manufacture web site.

http://www.safeceiver.com/freq.html frequencies it will receive

Have you seen this.. they are calling it a scanner ? They come in VHF or UHF Unlike conventional scanners, the SafeCeiver is pre-programmed with the most commonly used FCC licensed UHF and VHF business, commercial, and government channels. Similar to the operation of an AM/FM radio, the SafeCeiver allows the user to store or preset up to 5 channels and scan them. No other product in the world offers the size, reception, 4 button control and low price. pre-programmed with 1600 UHF or 2500 VHF most commonly used frequencies How do you hold it? Where is the speaker? There seems to be an optional Lanyard for $19.95 (no picture) that allows you to wear it around your neck? Like a necklace ?

The SafeCeiver is an easy to use, revolutionary new compact two-way radio receiver device that allows you to receive vital information discretely. The unit is versatile and durable enough to apply to any situation where real time instantaneous information is needed using your current radio systems.

Unlike conventional scanners, the SafeCeiver is pre-programmed with the most commonly used FCC licensed UHF and VHF business, commercial, and government channels. Similar to the operation of an AM/FM radio, the SafeCeiver allows the user to store or preset up to 5 channels and scan them. Interesting find. I have thought that would be a neat product idea.
My hunch is they work well enough close in. Example, when APD had
their UHF system I would hazard a guess it would've worked fine in the
city limits, but wander out to Cedar Park or Round Rock and no so
much.

I'm basing this on how well my 900 MHz pager did and didn't work once
upon a time. It's an educated guess.

From: trebor1159
Topic: 3947 Message: 3947

If you only programmed in the control channels for the trunking, then you need to know that Williamson County's control channel changed from
858.96250 to 857.9625, which was one of the alternate channels.
It has been this way for at least a week.

everything in Williamson County has been encrypted with the exception of the following listed.

Round Rock Police
Round Rock Fire
Wm. Co. EMS - some
Taylor Police
Taylor Fire
various public works

Further discussion on this is at:

I have two PRC 127 handheld radios. I just got them in a trade for some other stuff. Do you or anyone you know want them?

They both look in good shape besides being a little dirty. I can not test either because the batteries are dead. They should crack open and allow AA rechargeable replacement installation. These are 136 - 160 MHz, 3 Watt radios. I saw several on eBay going for $200 each in good condition. I'd be happy with $200 for both.

http://www.kpjung.de/e_prc127.htm

Operator's manual and programming guides:
http://www.bkradio.com/_schematics/prc-127A_operator.pdf
http://www.bkradio.com/_schematics/prc-127_operator_tm.pdf

My two radios do not have the radio pouches but they do have the speaker/mics and chargers.

456.5625 MO 4p 4e 11K2F3E

My contacts at APD are telling me that the Austin System is about to be rebanded.

This means that you will need to program in the new control channels if you are doing control channel scanning.

The new frequency will be 15 Mhz below the previous one.

So for Simulcast 1 the current control is 866.2875 so the rebanded freq will be 851.2875

For Simulcast 2 the current control is 866.1375 so the rebanded freq will be 851.1375

You might want to begin to program these in so our radio will not miss anything once the change has been made.

3967. American Hero's Airshow at Camp Mabry

Yahoo group: CenTexComm
Date: 2010-04-17 04:16:59 UTC
From: Robert
Topic: 3967 Message: 3967

Saturday and Sunday is the American Hero's Airshow at Camp Mabry.
http://www.heroes-airshow.com/austin/2010/2010.99%20Full%20Flyer.pdf
http://www.starflightrescue.com/index.php/sp/events/Celebration%20Schedule

We have a number of different aircraft slated to arrive. We will have an R22, a single engine trainer, on up to the mighty Blackhawk and an Apache, the ultimate in military helicopters. We will have the regional EMS aircraft, to include STAR Flight, STAT Air and Air-Evac. Air One, from the Austin Police Department, as well as aircraft from the DEA and Coast Guard will also be on site.

Our flight teams will begin arriving at 8:00 AM, weather permitting. Departures will begin at 3:00 PM.
We still need to confirm frequencies for this location.

AISD's new Rapid Response Center
by KVUE News

The Austin Independent School District has a new tool to help keep kids safe. The Rapid Response Center can be placed on any campus. It will soon be used to carry personal and equipment to large scale events.

Sherri Stakes is AISD's Emergency Management Specialist.

"We have four work stations where we can have four people come in to use computers. (It also) has phone and network capability...Should we lose phone and data connectivity I have a satellite, though satellite have voice data commutation via the satellite. The idea is no matter what the disaster is, we will have some form of communication," said Stakes.

The state-of-the-art command trailer is multi-purpose. This fall it will be stationed at House Park to provide safety and security at football games. It can also be activated for all kinds of emergency situations.

"It can respond to critical incidents that may occur here in the district in the event of bad weather. If a campus has damage we can roll out to provide security for the campus staff and administration work out of the trailer to keep information flowing," said AISD Police Department Captain Eric Mendez.

The Austin Project and Capitol Area Crime Stoppers helped make the trailer operational. A new tool helping to keep kids safe on and off campus.

3975. Fwd: [dfwscan] Uniden Open House 2010

Yahoo group: CenTexComm
Date: 2010-05-14 23:51:39 UTC
From: John Mayson
Topic: 3975 Message: 3975

Anyone want to carpool?

Uniden invites you to attend the 2010 Uniden Open House on Saturday, June 26, 2010 at Uniden America Corporation Headquarters.

We are firing up the grill this Summer, and want to invite you over for some burgers, hot dogs, and other treats. We'll be announcing a revolutionary new scanner product on July 1, but attendees will get a sneak preview and introduction to the product from Uniden's Scanner Product Manager, Paul "UPMan" Opitz. Plus, hear from other guests including Lindsay Blanton, owner of RadioReference.com, the source for radio system information as well as other special guests.

We'll be opening the doors at 10:00 AM and starting the program at 11 AM. This is an event that you will not want to miss.

Because we want to be sure to have plenty of food and other goodies, we are asking you to register for this event. To do so, simply follow the link below.

3978. BCD396T Handheld P25 Scanner For Sale ($375 Mint Condition with All Original Items & Box)

Yahoo group: CenTexComm
Date: 2010-06-11 19:10:16 UTC
From: Brian
Topic: 3978 Message: 3978

Hi Groups,

I'm selling my BCD396T scanner because I need the money to take care of some bills. It has ALL accessories (including the brand new NiMH batteries) and the box it came in. It is in mint condition with no scratches or marks on it. I didn't want to have to sell this radio, but I am left with no choice due to bills and financial obligations. The Uniden BCD396T has been kept in a protective case too for as long as I've had it. It has been taken care of extremely well.

For those who may not know the radio, this is the APCCO 25 digital/analog scanner that is fully capable of being used on the re-banded Motorola trunk systems (i.e. Garland, etc) being implemented all over the country today. I've already updated all firmware on the radio and it is up to full specifications and capabilities.

I can either mail the radio to a buyer for an extra $10-$12 (it's usually cost me around this price range when selling and shipping a handheld on e-Bay) and this will be insured and require a signature for confirm of delivery. Or, if the buyer interested wants to meet on the west side of Fort Worth, that could be arranged too.

I love this radio and I'm sure anyone interested in buying it would too. I can send pictures of the radio to any interested persons.

Contact me offlist if you are interested.

Brian

Ft. Worth, TX

3981. AquaPalooza notes from Commissioner's court this is all I could find if we can get talkgroups or freqs

Yahoo group: CenTexComm
Date: 2010-07-08 20:16:49 UTC
From: Robert
Topic: 3981 Message: 3981

The mass gathering permit is for the aquapalooza signature event on Lake Travis. Proposed dates July 9th and 10th, with July 11th being a rain date. First, I want to tell you a little bit about what is aquapalooza. This basically is a water based event. They are held across the united states every year. But -- but sea ray is the sponsor, sea ray boats. For the area that has the largest retail sales that dealer will get signature event for their area. The largest retail sales location was in our area this year, so Lake Travis has been chosen for the aquapalooza signature event. They hire headliner for that event to assist in drawing crowds. This year's headliner is brad paisley. The location is out on a piece of land called Calcashu Point out in precinct 3. A large stage will be set up on land facing out over the water. There are approximately 16-acres there that are going to be used for this event. On this 16 acres will be a number of vendors, approximately a dozen food vendors, there will be other vendors that will be selling items that are related to this event, souvenirs and things like that. The -- the public access to this event is by water. There will be very, very limited access to the event by land. Basically, it will be property owners only from the area where this land, where the tent and event is going on. The event organizer is placing a grid out in Lake Travis, which will moor approximately 2,000 to 2500 boats. Visitors will be shuttled ashore or they may bring their own personal craft and go ashore to visit the vendor booths during the day. The event planners are saying on the low side 15,000 people in the two days on the high side they are expecting 40,000 people in two days. From the standpoint of planning, from a public service, the unified command system will be used by public service agencies and there is a long list of -- of agencies that have been involved in the planning, but I want to read off my list the -- at least the Travis county groups. Travis county sheriff's office, Travis county parks, Travis county precincts 2 and 3, Austin Travis county emergency medical services, Travis county star flight, Travis county emergency management, Travis county fire marshal's office, Travis county and Austin wireless communications, in addition there are four state agencies, four ESD's, five local police departments, Willco and a private EMS Provider as well as Austin Travis county health department. We expect access will have a -- aquapalooza will a significant event for those people in retail sales and provide services related to lake events. So at this time if you have questions, specifics, we'll try to address concerns of the court.

>> what type of safety precautions, you have that type of mass gatherings, what kind of safety precautions I guess have been put in place to make sure whatever is going on out there, the safety features are paramount and of course that will be a successful event provided that the safety is in place to make sure of that -- that persons welfare and safety are -- are paramount. What have you basic lil planned I guess -- collaboratively with

the -- all of the different agencies that would be overseeing this event?

>> okay, there will be -- the event basically has two aspects. One of them is water, the other is land. There are -- there will be a private EMS. Provider that will be there. That is providing EMS. In addition Austin Travis county EMS. Plans to stage events, Travis county star flight will be -- will be in the area. But -- but there are -- there are approximately 25 volunteer life guards in addition to the paid life guards and the EMS. That will be on scene on the water there will be EMS. On land with transport units, both land and air available. From the land side. From the law enforcement, I'll ask TCSO to address the law enforcement, the safety side of that because they have primarily been the coordinator for that. The -- the food vendors, the Travis county fire marshal's office will have a presence there both days, the -- for inspection and the two days of the events as far as fire safety and concerns there.

>> Starting Thursday night through Sunday morning there will be a law enforcement component on site 24/7, the main events we will be staffed up on the land and on the water. The latest information from the tropical storm or if it's now a hurricane may draw some of our preplanned assets away. We are hoping to get it back in time. But if not we have a contingency plan to still staff the event. More boats on the lake than on a normal holiday weekend to address the issue, as well as officers on the land for the events.

>> obviously if there is an emergency, 911 is what people should call. But there are a lot of property owners around the lake, around this area where it's going to be staged. If there's a non-emergency, is there a contact number.

>> that would be the non-emergency line for the sheriff's office. 974-0845. I have spoken to a lot of the landowners already in the area and addressed their concerns.

>> thank you. With regard to the county emergency response that's going to be available, of course, star flight is essentially a -- a user fee except in the circumstances of ingigency. With regard to the sheriff's office coverage that is taxpayer. Ism thrilled, it's going to be wonderful, I don't anticipate problems. But I'm wondering with regard to our additional staffing and I imagine some overtime involved in it, we have a very, very robust aquatics law enforcement division. But we will probably be using all of it

Using The Greater Austin/Travis Regional Radio System (GATRRS)

Interop 8 talkgroup 3403 (Parks and Wildlife command post running boat registration checks)
Interop 9 talkgroup 3404
Interop 10 talkgroup 3405

154.28 is a Patch and is repeating talkgroups and poss some others.
Parks and Wildlife Ch 5 151.355

I saw both STARflight helos, and 2 other helos. I heard traffic about a private medical helo (possibly MedEvac)

this is is Constable Precinct 2 and last night I heard some officers on a tac channel griping about parking enforcement. It was interesting.

Also hearing oil spill patch traffic on talkgroup 5336 (boat captains reporting oil sightings) they seem to be off Louisiana

Date: 09/08/2010 1800 CDT

Program: Travis County STAR Flight
7800 Old Manor Rd.
Austin, TX 78724

Type: EC145
Tail #: N392TC
Operator/Vendor: Own Part 135

Weather: Heavy rain showers in the vicinity

Team: Pilot, flight nurse, flight paramedic. No injuries reported. No patient.

Description:
STAR Flight 1 responded to a search and rescue call in Williamson County. After performing a high recon of the area, an approach was performed. During the final stage of the descent into the field, the
pilot noticed a power line stretching across the middle of the field.
The pilot made the necessary control inputs to successfully avoid wire
contact. In performing the avoidance, the pilot noted that the Mast Moment Caution light had illuminated. The crew performed an uneventful landing, shutdown and contacted management / maintenance.

The aircraft was inspected by maintenance and returned to service.

Additional Info:
STAR Flight 1, STAR Flight 2 and STAR Flight 3 had been operating in Williamson County for several hours and had already performed 13 hoist
rescues as a result of Tropical Storm Hermine.

3987. Weekly Texas FCC Grants CenTex

Yahoo group: CenTexComm
Date: 2010-10-03 21:51:44 UTC
From: Robert
Topic: 3987 Message: 3987

It is funny to me that the city of Austin always said it had to vacate the 460 frequencies because the FCC needed them for TV signals or that it was mandated or something. But if that is the case then why is the State of Texas able to take over some of their old UHF frequencies and continue to use them. It was all a bunch of lies and the city bought all this from the radio techs hook line and sinker. I know most of the original radio techs are already retired and living high on the hog. They just keep saying.. Cha ching .. Cha ching. Now they have some of the counties out in the hill country thinking they need to go to VHF trunking and it's all just a bunch of lies. So silly. . Oh well.

3988. fltsatcom/UFO conversations

Yahoo group: CenTexComm
Date: 2010-10-09 01:52:02 UTC
From: Myles Barkman
Topic: 3988 Message: 3988

We don't get too much mil air traffic here in the Houston area so with all the recent discussion of various AAR talk, thought I would search the 225-380 band and see what I could dig up.
Instead of military aircraft, I find some conversations that sound like Eastern European folks talking on repeaters.
I found about 10 different freqs that had similar-speaking folks and all nearly the same signal.
Called a buddy in College Station and he could barely hear the same thing.
So I ruled out anything local and figured it must be a satellite.

I remember seeing some YouTube videos of folks recording people on satellites. Here's one:
http://www.youtube.com/watch?v=s5jFWxGeqSk

The freqs I heard were (FM mode):
253.56
253.39
255.55
258.65
260.63
261.57
262.23
262.42
263.67
263.69

This was all on the 396XT hooked up to nothing more than the dual-band mag mount on the top of my vehicle. If I spoke Czech, Polish, Hungarian, Turkish, Russian, or whatever it was they were speaking, I would have been able to understand all of it. Several of the YouTube sites note that these are Brazilian pirates. Perhaps I don't know what "Brazilian" sounds like. Signal was steady but no bars on display. Of course, when I got home and hooked up to discone outside, I can't find anything. So perhaps it was a passing satellite.

Apparently 255.55 is a common one.

Here is some list I found with freqs:
http://www.uhf-satcom.com/uhf/uhffr.html

Getting something at 263.93 now. Might be a different satellite.

If your scanner is doing a "control channel only" scan for the
Williamson County system
make sure you have it set correctly; I noticed this morning that I was
not getting them
and realized the control channel changed to 859.9625

Isn't it all still encrypted? I've given up monitoring them.

Interesting Myles. Were you searching the milair band in 5 kHz (or 10 kHz) steps? I guess you were searching in FM mode too? I'll have to give these frequencies a listen. Also, and you may already know this, when you search the milair band you might want to add your upper limit as 399.975. Since regular aviation related milair traffic is in 25 kHz steps and the AM mode, you will need to be sure to choose the AM mode and not just leave things on "Default" with your radio. Otherwise, once it gets to 380 MHz it'll switch over to FM (or maybe FMN). Brian Ft. I was originally in AM mode but when I found these guys, it didn't sound so good so I had to change my step size and changed to FM. The UHF Military aircraft band no longer uses 380-400 MHz for a few years now. That band is reserved for land-mobile use. Several areas have P25 trunk systems running in that band (not here in Houston) Coast Guard had to move some of their freqs out of the 381 MHz band because of this. Not to say that some aircraft won't venture up there but they aren't supposed to. ----- Original Message ----- From: "Brian" To: ; Sent: Saturday, October 09, 2010 9:32 AM Subject: RE: [CenTexComm] fltsatcom/UFO conversations > Interesting Myles. Saturday morning and hearing some patch traffic on talkgroup 3850 on the Austin TRS
it sounds like TxDot patch talking about arrow boards.

3995. HERO traffic assistance program returns

Yahoo group: CenTexComm
Date: 2010-10-27 13:23:27 UTC
From: Robert
Topic: 3995 Message: 3995

It's funny this used to be called courtesy Patrol. Program comes and goes. I also saw a Tollway assist white pickup with an arrow board getting on Mopac @ Parmer. I assume they use the APD talkgroups. Haven't specifically heard them yet.

HERO traffic assistance program returns

One of the most congested roadways in the nation will be getting some relief.

Beginning next week, a free roadside assistance program will launch in Central Texas to help keep traffic flowing along the IH 35 corridor.

The HERO program stands for Highway Emergency Response Operation. It's designed to clear traffic problems from the highway.

HERO trucks patrolled Austin back in 2005, but when funding ran out, the trucks were taken off the road. New federal stimulus funds are bringing them back to IH 35.

The trucks are fully equipped with air compressors <http://buyerzone.com> , jacks and a variety of tools to help with general break downs and clean up after an accident.

"Anytime we see (a vehicle) with flashers on, we'll stop and check. If they have a flat, we'll change it. If they're out of gas <http://en.wikipedia.org/wiki/Out_of_Gas> or in a wreck, we'll work it. I'm excited about it," said HERO driver supervisor Bud Tolliver.

The HERO fleet will patrol a 31-mile route on IH 35 stretching from Buda up to Round Rock.

"From a Williamson County perspective, the folks from Georgetown and Round Rock and other areas that commute to Austin for work, we hope, will experience a quicker commute because we'll be able to get some of those minor incidences off the road," said Williamson County <http://en.wikipedia.org/wiki/Williamson_County> Commissioner Cynthia Long

The Central Texas Regional Mobility Authority will lead this project. It cost $1.8 million to fund for two years. The agency is looking for sponsors that will continue funding the project beyond those two years.

The trucks begin patrol on Monday. They'll be in operation from 6:00 a.m. to 8:00 p.m. Monday through Friday. Drivers who need assistance can call 512-974-HERO. The services are offered free of charge.

We have a similar program run by the Sheriff's Office here in Houston. MAP (Motorist Assistance Program) will come help folks on the freeways if you call them or if they happen to see you when driving by. http://www.hcso.hctx.net/patrol/map/ They cover all Interstates and US highways (except 90) in the Harris County area. They do not cover State Highways or the Toll Roads. ----- Original Message ----- From: "Robert" To: Sent: Wednesday, October 27, 2010 8:23 AM Subject: [CenTexComm] HERO traffic assistance program returns > It's funny this used to be called courtesy Patrol. 3998. Feedback/recommendations for HomePatrol-1?

Yahoo group: CenTexComm
Date: 2010-11-08 02:06:53 UTC
From: W3NJ
Topic: 3998 Message: 3998

Anyone in the Austin area that has purchased/used the new HomePatrol-1 scanner? Definitely suited to the "hands-off" user, but looks like it has some possibilities using external SW (ScanCat and Butel ARC).

Wondering if it's a good deal or is there a better scanner choice for the various Public Service and ham/other frequencies.

Thanks
Bruce

I've had mine for a couple of weeks now and it's absolutely fantastic! As an advanced scanner user I was initially frustrated about not being able to make my own "adjustments" but the longer I have it, the nicer it is not having to worry about programming it (especially on trips). I have to say it is a great scanner all around from novice to advanced users. The only real downfall I see from it so far is new radio systems that have not yet been identified. It it isn't in the radioreference database, the scanner won't pick it up. To: CenTexComm@yahoogroups.com Date: Sunday, November 7, 2010, 8:06 PM Anyone in the Austin area that has purchased/used the new HomePatrol-1 scanner? Definitely suited to the "hands-off" user, but looks like it has some possibilities using external SW (ScanCat and Butel ARC). Wondering if it's a good deal or is there a better scanner choice for the various Public Service and ham/other frequencies. Thanks Bruce

4000. HomePatrol1

Yahoo group: CenTexComm
Date: 2010-11-08 04:25:52 UTC
From: Mid Austin
Topic: 3998 Message: 4000

It seems to get at least everything that the BC796D did, maybe more, so
I have happily sold the 796D. If "the end is more important than the
means" the HomePatrol1 is wonderful!

From: trebor1159
Topic: 3998 Message: 4001

I have had a lot of people asking me about the home patrol and I really didn't know anything about it so I do have a few questions or comments.

Is there any way to lock out a frequency? For instance, they used to run the VFD's off Firenet 153.95 and the radio techs have let that repeater go completely bad. It has all kinds of noises and garble on it and it's just gotten to where you have to lock it out. They have let it go on purpose telling people, if they just get a digital trunked radio, then they will not have problems. If you can't lock this out then the home patrol would be stuck on that 90% of the time, not to mention unnecessary chatter on the garbage talkgroups, the prison, and many other city and county services.

Also If you are out in one of the fringe areas, like Mustang Ridge, will it know to to monitor the Intelli-repeaters also,since you are likely to get better reception from them if they are using them?

Someone long ago sent in APD Talk 1-44, which I never understood and asked about, but was told it came from a very reliable source. To this day I haven't heard anything come up on any but one of these 44 talkgroups. Does the Home Patrol allow for unlimited talkgroups? If so then that would be ok, If not then stuff like this would clog up and prevent you from putting in the good stuff.

And to be sure, you are saying if they do pop up on a new talkgroup that the Home Patrol will not have it. So there is no Open Mode that allows you to hear this kind of stuff? So if there is a big disaster and they create a patch and it's a new talkgroup, then you will be left out.

What about all the other things that might be heard in a county? Does it automatically put in the Medivac, or railroad, or TxDot or TABC or DPS for that area? What about Federal? What about Air to Air? The Texas Forest service, may come into Travis County to assist with a large Fire. Will the Home Patrol pick that up too? or do you have to to already have it in Radio Reference that TFS goes with Travis County?

Hi Aaron and thanks for the reply re: "It it isn't in the radioreference database, the scanner won't pick it up." I understood it will pick up freqs that can be loaded into the Favorites file, whether it's in R/R or not.....is that true? For example, I see limited entries for all the repeaters in Austin when I look at the R/R database. Are these unlisted freqs not accessible by loading them in the fave file? tnx es 73 Bruce _W3NJ --- In CenTexComm@yahoogroups.com, Aaron Slaughter wrote: > > I've had mine for a couple of weeks now and it's absolutely fantastic! Correct, the scanner is featured to work directly with the radioreference.com database. There is, however, aftermarket software that is available that will allow you to modify the scanner and program it with freqs that you want but may not be in the database. The favorites folder is simply a quick link to frequencies/talkgroups pre-programmed in the scanner. Without the aftermarket software, there is virtually no way to modify the database in the scanner. 4005. Refresh on Travis/Williamson data files

Yahoo group: CenTexComm
Date: 2010-12-18 22:44:32 UTC
From: W3NJ
Topic: 4005 Message: 4005

I've been looking through the "files" folder and noticed most files are over 2-3 years old. Was wondering if someone would be willing to post their frequency data files from their scanner (human readable if possible) in the files area. I've looked at Radioreference and there are not many references to public service channels. especially P25, etc.

Thanks in advance

Bruce

Mine are equally old if not older. Which scanner do you have so we
can provide compatible files?

Hi John

That's kind of the crux of the matter. Looking at the BCD996XT, but want to make sure I'll get enough activity. Primarily interested in public service calls across Williamson (1st) and Travis (2nd) . My current "relic" is a R.S. Pro-2005. Not much activity on it these days with TV going to DTV, ham radio traffic down, and most services going to digital modes. At least the air-bands are still on AM :-)

Wondering if it's worth the investment with respect to what traffic I'll hear. From your current database, what percentage of the channels do you see with activity on an average day? (I'm sure this will be a REAL rough number...wondering if it's 20%, 50%, or 80%)

Thanks
Bruce

4009. new Texas Amateur radio list

Yahoo group: CenTexComm
Date: 2010-12-24 17:38:57 UTC
From: Myles Barkman
Topic: 4009 Message: 4009

I don't often post across so many lists at once so forgive me.
Just wanted to tell you about an extra gift under the tree from me.
Some of you have seen my Texas Amateur Radio list that I kept up-to-date around the 90's, up until I left Aggieland and came down to the Houston area.
I've had several requests if I've updated that list but I'm not in a position to verify the number and wide range of repeaters without the help of the great station that once was the W5AC TAMU ARC.
But I have been working on a project to convert the old text file into an Excel file and update the data so that the user has many options for sorting and listing the data I have in many different ways.
I started converting the data over earlier in November and finally got it to a point where I can share it with you now. I call this version 0.9. It can still use some cleaning up but for the most part is much better than dealing with several different lists for different areas. Now I can just edit one list and if you want to print out a list for your area, you can select the counties you want or even the cities.
You can sort to your heart's desire too, however you decide to.
You can get to the list from this page, http://home.comcast.net/~freqzone/freqs/freqs.html and go down to Texas-wide Amateur list.
The list itself is here: http://home.comcast.net/~freqzone/freqs/tex_ham.xlsx

It is in Microsoft Office Excel 2007 xlsx format. If you are still using the older xls format, you won't be able to view this. If I get requests to convert down to that, I may include an older version on the webpage as well.

So if you happen to see this email and you are out and about traveling, maybe you can try confirming some of these where you are.

I've removed some information from one group's system. You probably know who it is. Didn't feel like dealing with the phone calls/emails.

So have fun with it. I still have some things to learn about Excel and maybe I can figure out how to note updates to the list in future versions.

Happy holidays and stay safe.

Yes that is correct. I guess since that site is new to GATRRS is the reason not many talkgroups have been ID'd yet. They already have some sort of office in Austin. It's rather
hush-hush (or was) but their job postings seeming to be geared towards
fraud issues, customer service, etc.

4026. SkyWarn Training This Weekend!!!

Yahoo group: CenTexComm
Date: 2011-02-16 17:22:56 UTC
From: Robert
Topic: 4026 Message: 4026

Subject: ALL / SkyWarn Training This Weekend!!! - IMPORTANT / PLEASE READ

.... Please Feel Free to Relay to All Interested Parties ....

Wednesday / 16 February 2011

Ever wanted to know what specific types of weather to be on the watch for during
periods of severe
and inclement weather? We've the got the training session for you!!

Our local 21st Annual Lou Withrow SkyWarn Training Session (including both basic
and advanced
severe weather training) is scheduled for 900am to 400pm this coming Saturday /
19 February 2011 at the
Pickle Research Campus, in north Austin, in the Commons Building (Big Tex Auditorium).

You are welcome to attend. There is no preregistration and this is a free training session. The only cost
is your expense for a "on your own" lunch break at one of the local area restaurants. If you're going to
attend, you should enter through the Burnet Road entrance to the Pickle Research
Campus.

Those involved in public safety and severe weather safety / recognition, such as
amateur radio operators, first
responders (police officers, firefighters and EMS officers), emergency management officials and media representatives
(reporters and photojournalists) are encouraged to attend this important weather
training session.

The session is being sponsored by the Office of Campus Safety and Security at
the University of Texas
along with the National Weather Service, Texas Severe Storm Intercept, the Centex Chapter of the
American Red Cross, the 3M Austin Radio Club as well as the LCRA.

Paul Yura, Warning Coordination Meteorologist of the National Weather Service
Austin-San Antonio,

will be our basic and advanced SkyWarn instructor. Dr. Kevin Kloesel, of the

School of Meteorology
at the University of Oklahoma, will return for the keynote address. Pete Baldwin, Travis County Emergency
Management Coordinator, and Tanner Hunt, Plans Coordinator, City of Austin Office of Homeland Security
and Emergency Management, will present a session on Emergency Management.

Here is a web site with all the details for this year's session:
http://www.utexas.edu/depts/grg/kimmel/skywarn2011.html

Print out the updated south Central Texas SkyWarn Manual and bring it with you
to our session...
http://www.utexas.edu/depts/grg/kimmel/SCTXSkywarnManual.pdf

We look forward to seeing you at this years session.

Reposted from an email I got:

It's the time of year that Camp Mabry hosts their annual
American Heroes Airshow in conjunction with Muster Day - a two-day event
held on the grounds with lots of exciting and interesting displays of
aircraft (helicopter), Public Safety teams, Search and Rescue and fun for
the whole family.

This year will have a large number of operation WWII
vehicles with military displays throughout the event. There will be a WWII
battle recreation, as well as entertainment of all kinds.

More information about the Saturday event can be found at
the links below:

4031. as of tonight 4 towers have RE-BANDED

Yahoo group: CenTexComm
Date: 2011-04-17 02:57:56 UTC
From: Robert
Topic: 4031 Message: 4031

These 4 towers have REBANDED and are 15 Mhz lower
866 = 851 replace the higher frequency with the lower frequency.
867 = 852
868 = 853

1-003 1-3 Marble Falls IR 866.4625 866.8875 867.2875 867.8c 868.15
868.75

1-004 1-4 Honeycomb IR 867.26250 867.72500c 868.17500a 868.77500a

1-005 1-5 Burleson Manor IR 866.88750 867.28750 867.87500
868.22500c 868.52500a 868.92500a

1-006 1-6 USGS Shingle IR 867.6625 867.925c 868.4a 868.8a

If you are scanning just the control channel only; then you only have
one frequency to change.
if you are scanning all the frequencies; then you will need to change
them all.

4032. City of Lago Vista will be switching to LCRA talkgroups how crazy

Yahoo group: CenTexComm
Date: 2011-04-17 14:47:06 UTC
From: Robert
Topic: 4032 Message: 4032

This is so crazy. They will be on a difference radio band
than Travis County and the fire department.

Council approves LCRA agreement for radio frequency

Wednesday, April 13, 2011 | Mike Parker

LAGO VISTA <http://en.wikipedia.org/wiki/Lago_Vista>---The Council approved an additional interlocal agreement with the Lower Colorado River Authority to use its radio frequency for the police and public works departments.
Angelo said the city will lose its current frequency for its radios in December. The FCC will keep the analog frequencies and sell them to the highest bidder, he said, which has led the city to find another frequency.
Lago Vista Cpt. Jerry Reyes said the LCRA is less costly than the Travis County frequency --- the city's only other option. He said the 900 megahurtz system will cost the city $623 per month for both the police department and public works radios. Unlike the county frequency, LCRA has not shown any fee increases since 2000.

4035. Simulcast 2 - apparently some radios did not survive the rebanding

Yahoo group: CenTexComm
Date: 2011-04-28 14:28:06 UTC
From: Robert
Topic: 4035 Message: 4035

Yesterday they changed the control channel on Simulcast 2 to 866.3875; I think apparently some radios did not survive the rebanding so until they get them re-flashed.. they went back.. Maybe this is only temporary and will only last a few days. what's interesting however is that the control channel is having most frequencies coming up as re-banded and some are not re-banded. that's unusual.

talkgroup 1013 is the Ben White Road/IH35 closure for this weekend
Lots going on including UT Graduation Saturday night (if the world
doesn't end)
lot of proms and lots of graduation.

4039. GRE PSR-800

Yahoo group: CenTexComm
Date: 2011-06-01 21:11:17 UTC
From: John Mayson
Topic: 4039 Message: 4039

Hi All,

I'm finally back in the US and have a GRE PSR-800 scanner. Nice little radio. It took some getting used to, but so far I like it.

My schedule is pretty tight these days, but I was thinking about another "scan-in"? We met before at Central Market Cafe. It's a little hot to sit outside, so maybe something indoors? Preferably in central Austin to make it easy for people throughout the area?

John

If you aren't already monitoring this system you might want to start.

http://www.radioreference.com/apps/db/?sid=4563

I programmed it and I hear all sorts of weird stuff from the DEA in
Houston to Waco FD.

That's actually a very good question. I have a GRE PSR-800 that programs directly from RadioReference.com. Strangely it tells me there's a tower in Travis County and I pick it up rock solid. Yet, I see nothing on the website indicating a tower anywhere near here. I don't have my scanner with me at work. I'll check tonight. That's interesting, when I bring up Travis County in the EZScan software it shows TxWARN to have a site there, but when I scroll through the sites I can't find one that shows to be anywhere close. I would say it's the TxDOT site, but it's no longer in the database. ----- Original Message ----- From: "John Mayson" To: CenTexComm@yahoogroups.com Sent: Wednesday, June 8, 2011 8:41:38 AM Subject: Re: [CenTexComm] Re: TxWARN system That's actually a very good question. Very strange. I didn't pay much attention to that. When I get home
I'll put my scanner in the mode where it shows me which site it's
monitoring and report back.

It shows up in the GRE software as TxWARN and I'm hearing a lot of activity running from Waco to Houston. But the GRE software relies on RadioReference.com which says something else, so I'm confused. :-)

Yes, but from other posts on RR it's off the air and has been for months. Also since it isn't in the RR database it won't be in the PSR-800 library and I don't believe John manually added it. The quest continues! I haven't manually added anything to my radio and I cannot believe I'm
picking up Waco or Bryan.

Hopefully I can shed some light on it this evening.

Yes when I'm in the Houston area I listen to this system but when I set it from Austin I have not heard any traffic. I don't have all of the control channels loaded as I've only loaded the channels from the areas of town that I pass through. That is why I am trying to figure out which of the control frequencies are live in the Austin Area as I don't see Austin in the RR reference set.

Thanks,

Doug

From: John Mayson
Topic: 4057 Message: 4057

Which doesn't make a %#$@! ounce of sense since that's nowhere near here!!!

http://www.radioreference.com/apps/db/?action=siteInfo&siteId=17239

But my radio says I'm hearing that site.

Currently listening to Bryan PD on it. Still navigating the menus to
see if I can figure out the frequency I'm monitoring.

Oh man I wish I could pickup Bryan PD up here. I moved from Bryan to a ranch in Nebraska that is about 30 miles from a town of 1200. I'm on the volunteer fd here so they gave me a Motorola Minitor pager; the SO, all the county FD's and the road department are all on one frequency and there is rarely any traffic on the pager. Anyway, going from monitoring the action in Bryan to this has been pretty sad for a scanner enthusiast.

I'm going to guess that Lindale and GATRRS share some frequencies and you are actually hearing a rebanded GATRRS site.

4064. GRE PSR-800 and TxWARN

Yahoo group: CenTexComm
Date: 2011-06-08 23:25:51 UTC
From: John Mayson
Topic: 4064 Message: 4064

I learned something today. :-)

For those not familiar with the GRE PSR-800 programming software, it works like this. You select a state, then a county, then a trunked radio system (TRS). For some reason TxWARN shows up on the list for Travis County. But in this case it's irrelevant if they had a tower here or not, I'd still have had the same problem. I programmed the entire system, the dozens of sites, into my local scan list. With that many sites and that many frequencies I was bound to duplicate something and I did. I was actually monitoring the Austin system. In the future when I program my scanner I need to be more careful and only select sites in the region I plan to monitor. Otherwise I'll monitor something I didn't intend.

What clued me in was the DEA talkgroup. It was clearly a fire department.

Thanks all for the help and sorry if I got your hopes up. Wow, and I here I thought I was monitoring the entire state. :-)

4065. ROT Motorcycle Rally Weekend Road Closures Announcement ; should be interesting radio traffic

Yahoo group: CenTexComm
Date: 2011-06-10 13:15:30 UTC
From: Robert
Topic: 4065 Message: 4065

Austin police will be out in force this weekend as one of the nation's biggest motorcycle rallies pulls into town and clogs city streets.

While most of the Republic of Texas Rally events take place at the Travis County Expo Center east of Austin, Downtown will see heavy traffic, especially on Friday night.

The ROT Rally officially starts Thursday and is expected to have more than 50,000 participants this year, and organizers say over 200,000 spectators could be on the downtown streets of Austin.

Because of the large crowds, starting this Friday at 6 p.m., police are closing Second through 10th streets between Brazos and Colorado streets and Congress Avenue between East 11th to Cesar Chavez streets.

All roads are scheduled to reopen the next morning at 3 a.m.

With all the added people in town you should expect major traffic delays downtown for the entire weekend.

I-35, Colorado, Brazos and Cesar Chavez streets will remain open during the rally and should be the best detours to get around the congestion.

Simulcast 1 is mostly public safety including Fire and EMS; etc.
Simulcast 2 is mostly county units such as Sheriff and Travis County Parks and other city services such as trash, water, dog catcher, convention Center, corrections, etc.

So they are both used.

BASTROP COUNTY COMPLEX, Bastrop County. 14,000 acres, no containment. Heavy airtankers and single-engine airtankers assisted on this fire that started in the Lost Pines area just northeast of Bastrop. The fire has moved unchecked for at least 16 miles to the south and has jumped the Colorado River twice. The Circle D, K.C. Estates, Pine Forest, Colovista and Tahitian Village subdivision have been evacuated. Firefighters are trying to hold the fire at FM 2571. Reports indicate possibly 300 homes have been destroyed. MODIS satellite image indicates the fire has jumped Highway 95 and is approximately 25,000 acres.

STEINER RANCH, Travis County. 150 acres, no containment. The fire started just north of the Steiner Ranch subdivision. More than 1,000 homes are under mandatory evacuation in Steiner Ranch. At least 25 homes are reported lost. A Texas Intrastate Fire Mutual Aid System strike team responded.

PEDERNALES BEND, Travis County. 7,000 acres, unknown containment. The fire is burning four miles southeast of Spicewood. Twenty homes were lost, 30 homes damaged.

http://www.radioreference.com/apps/db/?aid=87
Also check 135.675. That is the primary Air to Air channel for Zone 5.
Bastrop repeater is 159.330 MHz PL 186.2.
Would think feds will get involved with it being this big too so check the
USDA Forest Service channels.

Found an interesting tidbit about some freqs for the NIFC:
http://www.nifc.gov/NIICD/hotsheet/hotsheet.html#frequencies

I'm too fat, er, far, from Bastrop to hear anything. I have been monitoring
the Steiner Ranch fire. Some of the Hays County units are coming in on the
LCRA system. Exciting monitoring, but not for a good reason. :-(

4092. AFD selling fire truck tours ??? this is nuts what if they have a fire

Yahoo group: CenTexComm
Date: 2011-11-25 15:34:04 UTC
From: Robert
Topic: 4092 Message: 4092

For $200, you get a two-hour stationary fire-truck birthday-party package for kids (a $400 value). The package includes:

o Working fire truck
o Professional firefighter chaperone
o Unlimited number of guests
o Choice of location

For $250, you get a two-hour downtown fire-truck tour up to five adults (a $500 value). The tour includes:

o Functional fire truck
o Professional firefighter chauffeur
o One hour driving tour of downtown holiday lights and SoCo district
o Stop at choice of restaurants (meal not included)
o Pickup and drop off

The staff at Austin City Entertainment thrills kids with stationary birthday parties aboard working fire trucks and tote adults around in style during fire-truck dinner tours of downtown?s holiday lights. Kids? eyes widen as trained and experienced firefighters pull up in front of homes in fully equipped fire trucks. Youngsters crawl around on the trucks as firefighters discuss safety, answer questions, and explain the function of the truck?s anatomy, including its hoses, ladders, and tear ducts. For the adult tour, up to five guests gaze at glittering holiday lights from their elevated ride as a professional firefighter chauffeur cruises through downtown and the SoCo district. The truck stops at partygoers? restaurant of choice so that guests can enjoy a leisurely meal or bond with chauffeurs by extinguishing tabletop candles with a drinking straw.

4104. STAR Flight basing a helicopter, crew at Dell Children's

Yahoo group: CenTexComm
Date: 2012-01-20 12:53:04 UTC
From: Robert
Topic: 4104 Message: 4104

STAR Flight basing a helicopter, crew at Dell Children's

Travis County STAR Flight is basing crew members and one of its three medical helicopters at Dell Children's Medical Center to ease transport and care of critically ill or injured children, officials said Thursday.

Until last month, when the transition began, only one STAR Flight helicopter was hospital-based, at the publicly owned University Medical Center Brackenridge. The other two were kept at a hangar east of Dell Children's where one helicopter is kept out of services for maintenance, leaving the other two ready to fly, said Casey Ping, the service's program director.

Like Brackenridge, Dell Children's has a Level I trauma center, the highest level, serving the most critically sick and injured children in a 46-county region.

Being on site, STAR Flight paramedics will be able to collaborate more on research and training with hospital staffers, STAR Flight and hospital officials said. It also will be easier for STAR Flight to transport children's hospital nurses and doctors on flights to pick up a child, cutting out time to land at the hospital and retrieve staffers, when needed. That will save precious minutes, said Greg Hartman, an executive of the Seton Healthcare Family, which operates the hospital.

Initially, the helicopter will be at Dell Children's 12 hours a day ? from 10 a.m. to 10 p.m. But "it will become a 24-hour site in a very short time," said Hartman, also the president and CEO of Brackenridge.

In anticipation of that, officials celebrated a grand opening of the STAR Flight service at the hospital Thursday and touted on-site accommodations that feature 1,175 square feet dedicated to STAR Flight crew members, including three bedrooms, two bathrooms, a kitchen, a communications room and storage for blood and medications.

"We can take blood out with us and administer it under a protocol established by those physicians" at Dell Children's, also saving time, Ping said.

Brackenridge has space dedicated to the paramedic crew, but it's being renovated, Seton officials said.

Seton paid for the accommodations at Dell Children's and contributed to the cost of the third helicopter when it was added to the fleet in 2010, Hartman said. He did not have amounts Thursday.

4107. Uniden BC296D for sale

Yahoo group: CenTexComm
Date: 2012-04-15 21:46:34 UTC
From: John Mayson
Topic: 4107 Message: 4107

All,

I have finally decided to sell my Uniden BC296D handheld scanner.
Details can be found here:

https://plus.google.com/u/0/100189201683309462509/posts/bT582gBE55W

Please send questions directly to me, not the list (john@...).
I am offering it to the scanning community first. If it doesn't sell
I will offer it on Amazon.com or eBay.

List owners, this will be the one and only announcement for this scanner.

Hi John,

Do you know of anyone in the Waco/McLennan county area that uses digital programable scanners like the RS Pro 197?

Are they digital? I visit the area from time to time with my GRE PSR-800 and it works fine, but it sounds analog. I've been recently and the city is still 800 analog, county is on the city 800 analog system with simulcast on conventional VHF. Hope this helps ! Thanks, John. I downloaded the radio reference channels for our area a couple of years ago, and just wanted to visit with someone locally that knows more than I do about using a RS pro 197. 4114. A private cell phone net

Yahoo group: CenTexComm
Date: 2012-07-31 20:55:26 UTC
From: Glenn
Topic: 4114 Message: 4114

A group at the Defcon hackers convention in Las Vegas set up a private cell phone system using Android GMS cellphones. Could have applications when the cell phone towers are down.

http://gigaom.com/2012/07/28/defcons-ninjatel-cell-network-could-solve-real-world-problems/

4115. Our list

Yahoo group: CenTexComm
Date: 2012-07-31 21:04:30 UTC
From: john.mayson@att.net
Topic: 4115 Message: 4115

I started this list back in 1998 or so. Lately it hasn't been very active. It's as much my fault as anyone else's as I never have time to listen to my scanner much less post anything. There are also other forums where radio fans gather such as RadioReference.com, Facebook, Google+, etc. competing with YahooGroups lists.

CenTexComm isn't alone. I've noticed a decrease in mail volume from ScanAtlanta, SCAN-L, HoustonScan, and DFWScan.

My question to the Austin-area scanning community is this. Is there another forum relevant to the Austin-area that I don't know about that is more active? If so I propose closing this list and inviting everyone to move to other forum.

If we're it, I'm open to suggestions on how to liven up the list. Thoughts I have had include:

1. Opening the archives so non-subscribers can see our posts and anyone can read in an RSS reader.
2. Encouraging the use of the #CenTexComm hash tag and cross-posting to Twitter, Facebook, Google+, etc. for more visibility.

Okay, two, that's all I can think up.

Please chime in. If I get a lukewarm response I plan on closing this list on August 31.

Interesting. I have a Jellybean GSM phone. I've never really played with SIP and honestly don't know much about it. I use Google Voice a lot when I'm overseas which is something different. I'm game to try this out. :-) On Tue, Jul 31, 2012 at 3:55 PM, Glenn wrote: > A group at the Defcon hackers convention in Las Vegas set up a private cell phone system using Android GMS cellphones. Glenn's posting gave me a third idea. Change the focus of the list to cover other technology. Right now this list is mainly for DC-to-daylight comms interesting to those in central Texas. This could include everything from two-way radios used at Central Market to monitoring commercial aircraft over the Pacific. We could open further to include hacking/mobile phone/technology/etc. On Tue, Jul 31, 2012 at 4:04 PM, john.mayson@... wrote: > I started this list back in 1998 or so. While opening the archives to non-members, it also guarantees that Spammers will be flocking in to harvest e-mail addys.

As far as the falling participation, the San Antonio list is barely there too. Have you considered trying to get the other comms e-mail lists in Texas to roll into one large forum?

Glenn

I raised this same question on DfwScan last weekend and initial response indicated that summer list activity is typically lower than other times of the year. I do not frequent the Austin area much anymore and actually I haven't played with the scanners in months but I still do enjoy reading the posts that come across this list. Just my two cents. My hunch is Twitter would be best using a unique hashtag. I'm not a social media expert, but here are my thoughts. 1. Facebook. Does have a chat features. Can you broadcast (i.e. chat to a group of people at once)? Some employers block Fb. Some refuse to be on Fb. Fb isn't easily searchable. 2. Google+ Highly searchable. Uses hashtags. While I'm very active on G+, few others are. 3. Twitter Searchability somewhere between Fb and G+. People seem to trust Twitter. I haven't experienced Twitter being blocked. Is 140 character limit enough? How would one actively monitor for a particular hashtag? Of course there's still AIM, MSN, text messages (SMS), etc. But they're all walled gardens, how do you communicate with people on SMS, AIM, YIM, MSN, etc. at the same time? Of all my scanner lists, HoustonScan is the most active and you're right, it's off this summer. The others, including DFWScan, are all but dead, IMHO. Back in the day there was a lot of discussion around new frequencies and talkgroups. For better or worse, RadioReference has eliminated this need. If it's not in Lindsay's database, it's probably unknown. What else do we talk about? I've gotten enough of a response that I'll keep the list going for now. I do plan to open the archives. I emphasize this is READ ONLY and also email addresses are obfuscated. The same rules will apply to posting. If you're a member in good standing you're unmoderated. If you're new you're moderated until you post a time or two. If your email address gets hijacked you'll be moderated until you get the situation under control. I would like to broaden the scope of the list to cover other geeky topics. If it gets too out of control I'll rein it in. I think the GSM phone hack is a good example. If you're on social media I highly encourage you to use the hashtag #centexcomm (capitalization doesn't matter). You can monitor this hashtag on Google+ here: https://plus.google.com/s/%23CenTexComm/posts. And Twitter here: http://twitter.com/#!/search/realtime/%23CenTexComm We can use this for breaking scanner alerts. I'm not currently on Twitter, but will rejoin if this takes off. From: John Mayson
Topic: 4124 Message: 4124

I personally am very tied into Google. They host my mail domain. My other domain, http://johnmayson.com points to my Google+ page. I own both an Android tablet and phone. I just like their products. I'm not saying they're better overall, just better for me.

A big reason I like posting to Google+ is because Google indexes it quickly. I have a search shortcut in Chrome (Google's browser) that allows me to search my posts. This comes in handy when I post something, say, radio-related and want to find it again months later. I don't know if any of you know Allan Stern. He's a milair monitor in Florida. He posts to G+. A few times I have searched for a callsign, frequency, etc. and found one of his posts.

Is anyone here active on Twitter? Here's what I'm curious about. Can I search for a hashtag and be alerted whenever there's a new posting with said hashtag? That would be ideal for Robert's idea for sharing breaking scanner alerts with the hashtag #centexcomm.

I have started sharing our archives and have changed the list description. As long as the list doesn't go off into the weeds almost anything is fair game. I mostly want to avoid national politics.

John

I just had to set someone to moderate on HoustonScan since it seems his email got hijacked. I like the regionalized lists, where I create rules that sort my emails into folders based on the subject ([CenTexComm]). What I like about the YahooGroups is that it pretty much runs itself and seldom needs my intervention. Everyone that is new is automatically moderated. After they post, I see if it is something valid and then set them to unmoderated. It is free and doesn't really require any work on my part to operate. It's not a chore to run. I started a HoustonScan on Facebook also but it really hasn't caught on. It is set to you have to be approved to cut out the riff raff. The reason HoustonScan is probably so busy is because there is a lot going on with different radio systems popping up. The city of Houston is starting to move over to a TDMA simulcast system. http://www.radioreference.com/apps/db/?sid=7235 As far as the RR forums go, I don't check them very often. It's probably more internet efficient insofar as not having to send out emails to people and filling up your computer. But I like having the emails on my computer where I can search them, even if the internet or RR or Yahoo is down. If it ain't broke, don't fix it. Just because it's not overly chatty doesn't mean there is a problem. Sometimes it's a good thing. -Myles -----Original Message----- From: CenTexComm@yahoogroups.com [mailto:CenTexComm@yahoogroups.com] On Behalf Of John Mayson Sent: Tuesday, July 31, 2012 5:10 PM To: CenTexComm@yahoogroups.com Subject: Re: [CenTexComm] Re: Our list Of all my scanner lists, HoustonScan is the most active and you're right, it's off this summer. The others, including DFWScan, are all but dead, IMHO. Back in the day there was a lot of discussion around new frequencies and talkgroups. For better or worse, RadioReference has eliminated this need. If it's not in Lindsay's database, it's probably unknown. What else do we talk about? I've gotten enough of a response that I'll keep the list going for now. I do plan to open the archives. I emphasize this is READ ONLY and also email addresses are obfuscated. The same rules will apply to posting. If you're a member in good standing you're unmoderated. If you're new you're moderated until you post a time or two. If your email address gets hijacked you'll be moderated until you get the situation under control. I would like to broaden the scope of the list to cover other geeky topics. If it gets too out of control I'll rein it in. I think the GSM phone hack is a good example. If you're on social media I highly encourage you to use the hashtag #centexcomm (capitalization doesn't matter). You can monitor this hashtag on Google+ here: https://plus.google.com/s/%23CenTexComm/posts. And Twitter here: http://twitter.com/#!/search/realtime/%23CenTexComm We can use this for breaking scanner alerts. I'm not currently on Twitter, but will rejoin if this takes off. Good point on the if it ain't broke piece. As the list owner I deal with more spam attempts than there are postings. It's not a huge deal, but does make me wonder if the list is still viable. I don't like the idea of a Texas-wide list. The state is simply too large. I travel to Houston (and to a lesser extent DFW) from time to time and like to keep up with what's going on. El Paso? Lubbock? Corpus? Not so much. Like you, it's a challenge to find time to scan. I greatly appreciate those who participate--such as Myles and the rest of the HoustonScan guys.

At the very least, the CenTex list is valuable for notification/communication when we need it. You never know. It would be a shame to lose even that capability.

Thanks for your work, John. If you want to hang up your hat, maybe someone else is interested in sharing or taking over?

Even reading only would give up our e-mail addresses. Just look at the attachments below. I vote a strong "NO" to opening the archives to anyone other than registered members. Even that assumes that no one forwards un-clipped e-mails. --- In CenTexComm@yahoogroups.com, John Mayson wrote: > > It would be read-only for the general public. Topic: 4134 Message: 4134

I live in New Mexico, and have a son who lives in Austin. I don't go to Austin more than twice a year, and when there, I don't have much time to search out new activity on the frequencies. Since I don't have anything new to post, I tend to sit in the background reading comments from others. I do enjoy what other users say, and often save them for future reference. I have asked a few questions in the past on this forum, and always got helpful responses. Due to the lack of activity, I would understand if you wanted to close it down. Whatever you decide to do, I just wanted to say thanks.

From: John Mayson
Topic: 4134 Message: 4136

That's fine, many lists are like this. A few active posters, a
few occasional, and lots of lurkers. As long as you're getting something
out of the list that's fine.

From: brbapb
Topic: 4137 Message: 4138

I wonder if it's related to all the other recent Walmart bomb threats. Also, the entire San Antonio airport was evacuated yesterday due to a bomb threat there.

From: Yuni T. Runker
Topic: 4146 Message: 4146

Last month I was playing around with Ian Wraith's DMRDecode. From central Austin I discovered three Moto TRBO or Capacity Plus systems.

One of the licensees is the W Hotel. Anyone else messing around with DMRDecode?

Near Fiesta Texas I've found a DMR channel and a possible NXDN sandwiched in between two unknown digital formats.

452.3750 unknown
452.3875 NXDN 96
452.4000 unknown

461.4125 DMR

One license is Valero. Another is S&P.

Aggieland. :-)

Initial reports I saw said it was at TAMU, but you're right, it was in
College Station, off campus.

That was interesting, we have come a long way since 1935. When the first cordless phones came out I used a modified AM broadcast receiver to listen to the 1.8 mhz side. I also used it to listen to AM hams on the 160 meter band. Those were the days. :)

I can remember I could hear cordless phones just above the mediumwave (AM) band. Note: this was back before this activity was illegal.

DPS to Showcase Past and Present Resources at Austin Museum Day

Exhibits to include patrol boat and cars, helicopter, motorcycles, SWAT and crime lab vehicles
AUSTIN - The Texas Department of Public Safety (DPS) will showcase its history as well as its current law enforcement capabilities on Sunday, Sept. 23, as part of Austin Museum Day, which features free exhibitions and activities at participating Austin-area museums and cultural sites. The DPS Historical Museum and Research Center is sponsoring the event at DPS Headquarters (5805 N. Lamar Blvd., Building A, Austin, TX 78752) from 12 p.m. - 5 p.m. on Sunday, which will be free and open to the public.

The DPS Historical Museum and Research Center event will highlight the department's rich history, displaying a vintage patrol car and motorcycle, along with vintage uniforms. Additionally, equipment currently being used by the department will be showcased, including a 34-foot shallow water interceptor. These new patrol vessels, equipped with multiple .30 caliber machine guns and three 300 horsepower engines, are assigned to patrol the Texas Coast and Rio Grande River.

Other DPS displays will include the:

<http://www.txdps.state.tx.us/director_staff/public_information/images/boatLg.jpg> Description: boat

<http://www.txdps.state.tx.us/director_staff/public_information/images/planeLg.jpg> Description: helicopter

* EC-145 helicopter, DPS' largest and most versatile helicopter, which has flown missions all over the state and the Texas-Mexico border;
* Crime Lab Crime Scene Vehicle, which is regularly deployed to crime scenes to assist in the investigation of crimes in Texas;

<http://www.txdps.state.tx.us/director_staff/public_information/images/DPSCaninelg.jpg> Description: DPS Canine

<http://www.txdps.state.tx.us/director_staff/public_information/images/DavidsonRoadKingLg.jpg> Description: Harley Davidson Road King

* Harley Davidson Road King Police Motorcycle and the Bike Patrol, assigned to patrol the Capitol Complex in Austin;
* Texas Ranger SWAT Team V-150 armored personnel carrier, which is deployed when responding to statewide critical incidents of a high risk

nature, such as hostage situations, barricaded subjects, and active shooter incidents;

<http://www.txdps.state.tx.us/director_staff/public_information/images/crimelabvehiclelg.jpg> Description: Crime Lab Crime Scene Vehicle

<http://www.txdps.state.tx.us/director_staff/public_information/images/V-150Lg.jpg> Description: V-150 armored personnel carrier

* Tejas Mobile Command Center, a self-contained mobile communications command center that deploys across Texas in response to natural disasters, law enforcement events and other emergency situations; and
* Canine Unit, which uses specially-trained dogs to search for narcotics and explosives.

DPS is one of many museum venues around Austin that will open their doors free of charge for Austin Museum Day on Sunday. For a complete list of activities, please visit: http://www.austinmuseums.org/wp-content/uploads/2012/09/AMD2012PressRelease_Sept13.pdf.

DPS to Showcase Past and Present Resources at Austin Museum Day

Exhibits to include patrol boat and cars, helicopter, motorcycles, SWAT and crime lab vehicles
AUSTIN - The Texas Department of Public Safety (DPS) will showcase its history as well as its current law enforcement capabilities on Sunday, Sept. 23, as part of Austin Museum Day, which features free exhibitions and activities at participating Austin-area museums and cultural sites. The DPS Historical Museum and Research Center is sponsoring the event at DPS Headquarters (5805 N. Lamar Blvd., Building A, Austin, TX 78752) from 12 p.m. – 5 p.m. on Sunday, which will be free and open to the public.

The DPS Historical Museum and Research Center event will highlight the department’s rich history, displaying a vintage patrol car and motorcycle, along with vintage uniforms. Additionally, equipment currently being used by the department will be showcased, including a 34-foot shallow water interceptor. These new patrol vessels, equipped with multiple .30 caliber machine guns and three 300 horsepower engines, are assigned to patrol the Texas Coast and Rio Grande River.

Other DPS displays will include the:

(http://www.txdps.state.tx.us/director_staff/public_information/images/boatLg.jpg)

(http://www.txdps.state.tx.us/director_staff/public_information/images/planeLg.jpg)

- EC-145 helicopter, DPS’ largest and most versatile helicopter, which has flown missions all over the state and the Texas-Mexico border;

- Crime Lab Crime Scene Vehicle, which is regularly deployed to crime scenes to assist in the investigation of crimes in Texas;

(http://www.txdps.state.tx.us/director_staff/public_information/images/DPSCaninelg.jpg)

(http://www.txdps.state.tx.us/director_staff/public_information/images/DavidsonRoadKingLg.jpg)

- Harley Davidson Road King Police Motorcycle and the Bike Patrol, assigned to patrol the Capitol Complex in Austin;

- Texas Ranger SWAT Team V-150 armored personnel carrier, which is deployed when responding to statewide critical incidents of a high risk nature, such as hostage situations, barricaded subjects, and active shooter incidents;

(http://www.txdps.state.tx.us/director_staff/public_information/images/crimelabvehiclelg.jpg)

(http://www.txdps.state.tx.us/director_staff/public_information/images/V-150Lg.jpg)

- Tejas Mobile Command Center, a self-contained mobile communications command center that deploys across Texas in response to natural disasters, law enforcement events and other emergency situations; and

- Canine Unit, which uses specially-trained dogs to search for narcotics and explosives.

DPS is one of many museum venues around Austin that will open their doors free of charge for Austin Museum Day on Sunday. For a complete list of activities, please visit: http://www.austinmuseums.org/wp-content/uploads/2012/09/AMD2012PressRelease_Sept13.pdf.

From: Brian
Topic: 4115 Message: 4162

I agree with Myles in that I like to be able to manage my messages and route them to folders too. Since I'm in Fort Worth myself, I have all of my CenTexComm e-mails routed to the folder for them. I realize I may be the only person in this category on this list, but being legally blind, that helps me to keep things in order (and I still get far behind way too often). I've always enjoyed this list, even if it is slow at times, because it provides me a feed into new changes or users in the whole I-35 corridor between Fort Worth and San Antonio. I love making it to Austin, New Braunfels, and San Antonio at different times and CenTexComm has been very helpful in keeping me and my radios updated :-) One other thing I really enjoy is being able to come over to a forum where people aren't constantly arguing and trying to put each other down. While RadioReference is a great resource, I don't even attempt to read (much less participate in) the forums there with all of the constant bickering that goes on. It's really child-like and creates more wasted time trying to find useful, radio related information. Either way John, you've done a great job here and I hope we can keep CenTexComm running even if it is real slow at times. Thanks for the work and idea of getting CenTexComm started in the first place... Brian Fort Worth, TX On 2012-07-31 17:45, Myles Barkman wrote: > I just had to set someone to moderate on HoustonScan since it seems his email got hijacked. > > I like the regionalized lists, where I create rules that sort my emails into folders based on the subject ([CenTexComm]). > What I like about the YahooGroups is that it pretty much runs itself and seldom needs my intervention. > Everyone that is new is automatically moderated. After they post, I see if it is something valid and then set them to unmoderated. > It is free and doesn't really require any work on my part to operate. It's not a chore to run. > I started a HoustonScan on Facebook also but it really hasn't caught on. It is set to you have to be approved to cut out the riff raff. > The reason HoustonScan is probably so busy is because there is a lot going on with different radio systems popping up. > The city of Houston is starting to move over to a TDMA simulcast system. http://www.radioreference.com/apps/db/?sid=7235 > As far as the RR forums go, I don't check them very often. It's probably more internet efficient insofar as not having to send out emails to people and filling up your computer. But I like having the emails on my computer where I can search them, even if the internet or RR or Yahoo is down. > > If it ain't broke, don't fix it. Just because it's not overly chatty doesn't mean there is a problem. Sometimes it's a good thing. > > -Myles > > -----Original Message----- > From: CenTexComm@yahoogroups.com [mailto:CenTexComm@yahoogroups.com] On Behalf Of John Mayson > Sent: Tuesday, July 31, 2012 5:10 PM > To: CenTexComm@yahoogroups.com > Subject: Re: [CenTexComm] Re: Our list > > Of all my scanner lists, HoustonScan is the most active and you're right, it's off this summer. The others, including DFWScan, are all but dead, IMHO. > > Back in the day there was a lot of discussion around new frequencies and talkgroups. For better or worse, RadioReference has eliminated this need. > If it's not in Lindsay's database, it's probably unknown. What else do we talk about? > > I've gotten enough of a response that I'll keep the list going for now. I do plan to open the archives. I emphasize this is READ ONLY and also email addresses are obfuscated. The same rules will apply to posting. If you're a member in good standing you're unmoderated. If you're new you're moderated until you post a time or two. If your email address gets hijacked you'll be moderated until you get the situation under control. > > I would like to broaden the scope of the list to cover other geeky topics. > If it gets too out of control I'll rein it in. I think the GSM phone hack is a good example. > > If you're on social media I highly

encourage you to use the hashtag #centexcomm (capitalization doesn't matter). You can monitor this hashtag on Google+ here: https://plus.google.com/s/%23CenTexComm/posts. It was also back when they transmitted with 5 watts of power too if I remember correctly :-) I had a radio friend in Houston that use to listen to a woman living off of Greens Road in the same apartment complex he did. She was drug dealing while shopping at Greenspoint Mall, a few miles away, and using her first generation cordless phone to do her business. Pathetic, hilarious, and interesting all at the same time...

4165. An Interesting Link for User's Manuals, Service Manuals, Etc.

Yahoo group: CenTexComm
Date: 2012-09-29 17:58:05 UTC
From: Brian
Topic: 4165 Message: 4165

I cam across this site the other day when looking for a pdf document (so much easier for me to see/use/search) for my JRC NRD-535D HF Receiver. It'd been so long since I'd turned it on, I couldn't recall how to get into some of the sub menu type options. Anyhow, I downloaded manuals for my old Icom R-7100, Yupiteru 9000M, a few other radios, and even one for my 1975 Electra Bearcat III scanner. Heck, I'd did a scanner trade around 1981 for this scanner and I never had a manual for the Bearcat III to start with :-) It's not like we'd need a manual for something that simple nowadays, but it's still a little nostalgic. I got the service manual for my Icom R-7100 and I needed it for some repairs I had bought the parts for in the late 1990's. Icom couldn't even sell me a manual for it back then. It might be of interest to some looking for new and old pdf manuals to use on their PC...

City Manager releases public safety plans for F1 weekend

Austin City Manager Marc Ott today, along with other City of Austin, Travis County officials and other partner agencies, announced the activation of an Area Command that will manage public safety, transportation and other issues during F1 weekend. Ott was joined at the news conference by leaders from Capital Metro and the Circuit of the Americas.

The activation of the Area Command will include coordinated participation with the Texas Department of Public Safety, the Federal Bureau of Investigation, the Federal Aviation Authority, Circuit of the Americas, and most City departments. The Area Command brings together decision-makers to coordinate the flow of information and strategy development. A variety of organizations and government agencies send representatives during an activation, depending on the situation.

“Beginning at 5:30 a.m. on November 15, I will be activating the Operations Center to serve as an Area Command on a 24/7 basis through the Monday evening after the race to ensure that all of our regional safety agencies are working in a cohesive and collaborative way, “ said Ott. “This ensures that all of our experts – including those from transportation, police, Emergency Medical Services, fire and communications – will be in one place to effectively and efficiently manage any issues that may arise during the race weekend.“

Ott said that in addition to Travis County, the City has been working closely with Capital Metro, the Austin Convention and Visitors Bureau, the Texas Department of Public Safety, the University of Texas, and the Circuit of the Americas.

“I want to thank everyone here today for their assistance and support,” said Ott. “Between our personnel here, those who will be stationed at the track, and others positioned throughout Austin, we’re going to be ready to put our best foot forward.”

NOTE TO EDITORS: The activation of the Area Command will include a coordinated Joint Information Center staffed throughout the activation. A media line will be initiated to answer City of Austin F1-related media inquiries throughout the weekend. That media line is 974-0699.

Here are some links on Frequency info for the race:

This regards a request by Broad Comm, Inc. (Broad Comm) for Special Temporary Authority
(STA) to allow use of a number of frequencies for the purpose of providing support and

logistics communications for the 2012 FORMULA 1 UNITED STATES GRAND PRIX at the Circuit of The Americas race track Austin, TX for the period of November 5 through November 21, 2012. Two frequency ranges are being requested (415.0000 to 419.9875 and 425.0000 to 429.9875 MHz). These frequencies cover 800 channels in 0.0125 MHz steps and are being requested to be compatible with the equipment normally used in conjunction with this type of event. In addition, six frequencies from the standard Industrial/Business Radio Pool are also requested. The FCC has granted Broad Comm and others similar requests for several previous events. The number of frequencies and units requested is to satisfy the needs of this activity and to allow for the fact that the frequencies are shared with other authorized users and therefore may not always be available.

MEDIA ADVISORY

November 20, 2012

Contact: Candice Wade Cooper, Public Information and Marketing Manager, (512) 802-1470

Media invited to observe

emergency preparedness scenerio

The Greater Austin Texas Region is pleased to announce it will be conducting the Urban Shield Full-Scale Preparedness Exercise, Saturday, Dec. 1, 2012.

Urban Shield is a national best practice exercise designed to assess the region’s ability to successfully respond to and manage multiple, man-made disasters and other simultaneously-occurring emergencies.

The overarching goal of the Austin Area Urban Shield will be to conduct a multi-layered training exercise, to enhance the skills and abilities of regional first responders and hospital personnel as well as those personnel responsible for coordinating and managing large-scale events.

Involved personnel will include regional emergency managers, law enforcement, regional SWAT teams, emergency medical services (EMS), and related government agencies from Travis, Williamson and Hays counties, and the cities of Austin and Round Rock.

Fire agencies will work with the Texas National Guard in a large HazMat decontamination scenario involving a large number of "contaminated" volunteer actors who will be transported to regional hospitals to test medical-surge capacity issues. Fire personnel will also participate in a multi-skills development scenario related to Urban Search and Rescue (USAR) techniques.

You’re invited to observe the following scenarios. These scenarios best represent our regional preparedness capabilities, and will provide journalists adequate opportunities for photos and/or live reports. It is highly recommended that you arrive thirty minutes prior to the start of the scenario.

SWAT Scenario #2—begins promptly at 10am and 2pm
Tactical EMS Force Protection in an Active Shooter Environment

Dell Diamond Center, 3400 East Palm Valley Boulevard, Round Rock, Texas

SWAT Scenario #6—begins promptly at 10am and 2pm
Police, Fire and EMS Integration in an Active Shooter Environment
ALERRT Training Center, 1285 William Pettus Road (Country Road 238), Maxwell, Texas

SWAT Scenario #8—begins promptly at 10am and 2pm
High Security Courthouse Scenario
Travis County Criminal Justice Center, 509 West 11th Street, Austin, Texas

Fire Scenario #1—begins promptly at 9am and 1pm
Regional Urban Search and Rescue (USAR) Training
Govalle Waste Water Treatment Plant, 911 Linger Lane, Austin, Texas

Fire Scenario #2—arrive anytime between 2pm-7pm
CBRNE - Hazardous Materials / Mass Decontamination Response Training
Travis County Exposition Center, 7311 Decker Lane, Austin, Texas

Media must receive credentials prior to entering each site. To register for media credentials go here: https://www.piersystem.com/go/doc/3603/1587079/ <http://www.piersystem.com/go/doc/3603/1587079/> . Beginning, Tuesday, Nov. 27 at 10 am, media credentials will be available for pick-up at the Combined Transportation and Emergency Communications Center (CTECC), 5010 Old Manor Rd. Austin, Texas.

For more information, please visit www.austinurbanshield.com or call 512-974-0450. Thank you for your interest in this important regional training exercise.

November 27, 2012

Contact: Linda Haynie, Urban Shield Volunteer Cooridnator, office (512) 974-0471 or pager (512) 802-1471

Volunteer "Victims" needed in Disaster Preparedness exercise

Saturday, Dec. 1, the City of Austin Office of Homeland Security and Emergency Management (Austin HSEM) will host Urban Shield, a multi-scenario full-scale disaster preparedness exercise.1,000 adult volunteers are needed to portray victims and participate in the event.

Urban Shield – the first exercise of its kind in Texas - is designed to test responders' skills at handling an incident involving contamination, mass injuries and casualties. This preparedness exercise will include emergency management, hospital personnel, law enforcement, EMS, and hazmat responders from Travis, Hays and Williamson County.

Volunteers will experience what happens in a real-world response to this type of event. Many "victims" will have moulage (fake injuries) applied, experience "decontamination", and be transported to area hospitals where they are "treated".

If you are interested in taking part in an event that will test our community's ability to respond effectively in a disaster of this kind, please go to <http://www.texsar.org/urbanshield> www.texsar.org/urbanshield to find out more and register.

We encourage you to register as soon as possible. Registration will ensure that you receive additional event details as they become available.

Lunch, beverages, and t-shirts will be provided to volunteers. The event will be held at theTravis County Exposition Center, 7311 Decker Lane. Volunteers can expect to participate for about eight hours in the disaster exercise.

For more information contact Austin HSEM at (512) 974-0450.

4175. Is Williamson County encrypted?

Yahoo group: CenTexComm
Date: 2012-11-30 15:36:43 UTC
From: brbapb
Topic: 4175 Message: 4175

I am out of range of the Williamson County towers right now, but may have more opportunity to monitor them soon. I seem to remember hearing that some entity in that county is encrypted. Does anyone know if that is true? Either WCSO, Georgetown, Round Rock, etc.?

4176. Re: [CenTexComm] Is Williamson County encrypted?

4177. Yes, most all of Williamson County transmissions are encrypted

Yahoo group: CenTexComm
Date: 2012-11-30 16:00:55 UTC
From: Robert
Topic: 4177 Message: 4177

Yes, most all of Williamson County transmissions are encrypted. Including Sheriff, EMS, City of Georgetown and Round Rock, and Leander and Cedar Park.

There are a few fire talkgroups that are not encrypted and Cedar Park and Round Rock have a few talkgroups that are not encrypted but all the dispatch ones are.

Don't forget that there is some simplex stuff to monitor too: like 462.975 Williamson County EMS Dispatch and 856.2125 for Round Rock Fire Dispatch

City of Austin Officeof Homeland and Emergency Managerment

MEDIA ADVISORY

December 1, 2012
Contact: Public Information Office, (512) 974-0699

Area Command Activates Urban Shield Excercise

The Austin-Round Rock Urban Area has activated a full-scale exercise over a 40-hour time period between Nov. 30 and Dec. 2. This exercise is designed to assess our region’s ability to respond to and manage multiple terrorist events and other emergencies occurring simultaneously throughout the greater Austin area, including Travis, Hays and Williamson Counties.

More than a dozen Urban Shield Excercises are underway throught the Central Texas area. Emergency crews are reponding as if the event was a real emergency. Sceniories include everything from active shooters to search and rescue efforts as well as a large scale disaster. This broad based excercise is monitored to evaluate area emergency procedures, protocoals, equipement and overall preparedness.

MEDIA will have access and opportunities for photos and/or live reports are available. *Media badging is MANDATORY.* To sign-up for a media badge, click here.

4181. base/mobile scanner recommendation

Yahoo group: CenTexComm
Date: 2012-12-01 14:52:49 UTC
From: Tad Danley
Topic: 4181 Message: 4181

Hello, I just joined the group and am looking for a recommendation on which scanner I should get for use primarily at home.

I'm located in Georgetown and understand that most of Williamson County is encrypted. I would like to listen to a variety of services in Williamson, Travis and Bell Counties, including public safety, military, commercial, etc. At this point I have narrowed my search to the GRE PSR-600, Radio Shack PRO-197 and Uniden BCD996XT. I don't fully understand how Object Oriented Memory used by GRE and RS compares to Uniden's Dynamic Memory Architecture, and would like to use programming software that will run on Windows 7 if that makes a difference.

Sorry for the very basic questions - trying to learn before I upgrade from my ancient Regency R1600!

Thanks in advance for the help!

4182. Re: [CenTexComm] base/mobile scanner recommendation

Yahoo group: CenTexComm
Date: 2012-12-01 16:42:32 UTC
From: Yuni T. Runker
Topic: 4181 Message: 4182

The main advantage of the '996XT is more programming software choices, including FreeScan.

The PSR600 and PRO197 only have two software choices - Win500 and PSREdit.

I have a 996XT and a PSR500. I'm happy with both - but they couldn't be more different.

The HP-1 and PSR800 are also worth considering. Both come with software included. If you scan Travis and other surrounding counties, you can quickly exceed the memory on the PSR500/600 and BCD/XT models. Not so with the HP-1 and PSR800.

> I'm located in Georgetown and understand that most of Williamson County is encrypted. I would like to listen to a variety of services in Williamson, Travis and Bell Counties, including public safety, military, commercial, etc. At this point I have narrowed my search to the GRE PSR-600, Radio Shack PRO-197 and Uniden BCD996XT. I don't fully understand how Object Oriented Memory used by GRE and RS compares to Uniden's Dynamic Memory Architecture, and would like to use programming software that will run on Windows 7 if that makes a difference.

4184. Photos from Travis County ARES participation in Urban Shield 2012

Yahoo group: CenTexComm
Date: 2012-12-02 04:17:23 UTC
From: Steven Polunsky
Topic: 4184 Message: 4184

The Travis County Amateur Radio Emergency Service (www.tcares.org) provided communications and bus monitor volunteers for the full scale functional exercise Urban Shield 2012 in Austin, Texas on 1 December 2012 (http://www.texsar.org/urbanshield/). Photos are online at this link

https://picasaweb.google.com/103403791331430781980/UrbanShield2012?authuser=0&authkey=Gv1sRgCKf00smngryCDw&feat=directlink

You may reuse these photos; we ask that you credit Travis County Amateur Radio Emergency Service.

4189. Pro 106 scanner

Yahoo group: CenTexComm
Date: 2012-12-31 13:53:14 UTC
From: ryatx
Topic: 4189 Message: 4189

Rick here. Live in Austin. I am newbie to group. Looking for help. Anyone know how to program Radio Shack 106 scanner (gifted to me; bought from ebay). I will gladly pay fee but would also like to learn how to do programming. Need it cleared & set up with Austin Travis county services. If interested/can do, please contact me. You may fwd email to a contact if you know who might be able to help/interested in making a few $. Also interested in how many HAMs are in group? I am interested in pursuing license. Thanks for your time and Happy 2013! Sincerely, Rick

Welcome aboard. Hopefully someone here knows a thing or two about your scanner. I know we have quite a few hams. I forget when it is, but I have attended the Belton Hamfest from time to time. They always have testing available. On Mon, Dec 31, 2012 at 7:53 AM, ryatx wrote: > Rick here. Live in Austin. I am newbie to group. Looking for help. Looks like Belton is in April. http://www.beltonhamexpo.org/ This gives you time to study and go pass your test. Last time I was there I paid one sitting fee and kept taking tests until I failed. I was only interested in going up one level, hence I only studied for that one level. I took a second test and passed that, but missed the mark on the third. For the Pro-106 you can perhaps talk to some people in
http://forums.radioreference.com/radio-shack-scanners/
I think http://www.starrsoft.com/ is one of the vendors that had
software that will program the Pro 106.
I have a Pro-96 data file for Austin and I think there was software that
will convert a Pro-96 data file to the Pro-106.
if so, let me know, i can send you my Pro-96 data file for Austin area

4194. 15th Annual MSET / STAR Flight Helicopter Landing Zone Training Class - Saturday Feb 16 Shoreline Christian Center

Yahoo group: CenTexComm
Date: 2013-01-17 01:09:29 UTC
From: Robert
Topic: 4194 Message: 4194
Attachments: 1 described; binary payloads are missing from this source WARC

This incredible class is organized by the Motorcycle Special Events Team and Air Evac to train emergency and lay personnel on how to select and prepare an emergency helicopter landing zone, how to communicate with the helicopter pilot, how to approach the helicopter and how to package the patient for a fast and safe emergency transport.

When seconds count, citizens of Austin and surrounding communities may at some time be the beneficiaries of this vital training provided by Air Evac. All emergency personnel such as EMS, fire fighters, law enforcement, search and rescue, emergency response teams, amateur radio operators, boy/girl scouts, and others are invited to attend this FREE training class. Attendees will receive CEU credits based on their organization / department requirements and protocols.

E V E N T D E T A I L S

Calling all wilderness survival experts in training! Come learn how to survive and thrive in the Central Texas outdoors. Meet first responders responsible for outdoor emergency services, see spiders, snakes, lizards and other wildlife in live demonstrations, learn to set up your own campsite, take a wilderness survival hike and try your hand at archery, atlatl, flint knapping, rock climbing, geocaching and other sports. A fishing contest with prizes will be held at this event along with a first time fishing kids' program. This event is free and open to the public after park entrance fees. For more information contact Amber.conrad@... <mailto:Amber.conrad@...> or visit facebook.com/mckinneyfalls or follow twitter.com/MckinneyFalls.

Marble Falls imploded the old Hwy 281 bridge at 8am.
traffic on 151.325 and 155.97

KXAN promised to show it live but said they were having technical difficulties. it sounds like their crew arrived late and never could figure out what to do.
News 8 was live with the count down but when they got to zero the signal was lost.

now Radio traffic said they have no phones, no 911 and Verizon is down.

Like you said the news crew missed it, but they are showing multiple videos shot by amateurs here:

I saw it from my hotel balcony here at the La Quinta here in Marble Falls. It was gone in a flash. Llano SO deputy from Llano County advises no phone service from annex. Marble Falls PD has advised all extra units to go home at 12 noon.

Did the shock wave from the explosion cause the outage or was a cable cut somehow? Egg is on someones face.

Utilities are often run along/under bridges since it is a relatively stable and safe way to get across a waterway. Perhaps someone didn't check if those pipes attached to the bridge had some live stuff in them.

From: Robert
Topic: 4207 Message: 4207

what i heard is that the explosion created an electromagnetic "pulse"
and that wiped out a bunch of things.

cell towers, some power, 911 lines.

the live crew had to drive 10 miles out of town to get a signal out and
transmit their video

I wonder if some of the TV folks used backpacks that stream video over
the cellular network?.the network gets hammered by all the users
watching?then no video gets to the station.Have a microwave van or
satellite truck gives you guaranteed bandwidth.

Update from this webpage:
http://www.kxan.com/dpp/news/local/hill_country/us-281-bridge-in-marble-falls-imploded

Sunday afternoon, crews were still working to restore phone service. The Capital Area Council of Governments released a statement Sunday saying, "A major fiber cut in Marble Falls, Texas is causing disruptions to telephone and 9-1-1 service in the following counties: Burnet, Llano, and Blanco Counties. If you are experiencing issues reaching 9-1-1, please seek assistance at the nearest sheriff's office, police station, fire or EMS station."

Fiber Optic Cable that runs next to bridge was damaged by shrapnel, cutting communications to dispatch call centers, which are now rerouted to Burnet County until the problem is repaired. No emergency calls came in during that time.

Burnet County officials released a statement as well, saying, "Areas of Burnet, Blanco, and Llano Counties are without telephone service due a major telephone line being damaged this morning when TxDOT and Archer Western used explosives to demolish the old US 281 bridge in Marble Falls.
Cell phones and Land Line telephones are out of service."

Burnet County said Verizon estimates that some service will be restored late Sunday night.

"Citizens should take precaution to check on neighbors and family members in the impacted areas for any emergency assistance. Law Enforcement, Fire, and EMS are operational with their radio systems, but can only receive 911 Emergency Calls to the Burnet County 911 Dispatch Center," officials said.

Marble Falls Fire Rescue Chief Johnny Caraway said shrapnel damage wastewater lines near the bridge.

"Wastewater runs through double lines, so no spillage happened. Sewage is being rerouted until the pipes are repaired, which should be by sometime Sunday evening," Caraway said.

Ooops.

So much for the none nuclear EMP theory. Apparently someone forgot to drape enough kevlar and nomex cloth over a fiber cable. Not to mention the sewer line.

I'd imagine that some company or companies insurance rates are going to rise significantly in the near future.

And situations like this are why government contracts are so long and cover so much.

Speaking of EMP causing the lights to go out, our neighbor here near San Antonio, David Crawford has a movie coming our based on his book "Lights out"

Dear Lights Out Follower,

HEROES WILL RISE! It's time to confirm the rumors.
www.lightsoutsaga.com

- The Lights Out Saga Team

P.S. - Part of our announcement is very time sensitive, and could include you. Click Here

4218. New helo to fight wildfires but what about pilots?

Yahoo group: CenTexComm
Date: 2013-04-11 00:57:53 UTC
From: Robert
Topic: 4218 Message: 4218

They bought a helicopter but the pilots will come from Starflight so not sure how that is going to work.

If you have a fire mission the pilot takes the fire chopper if you have a medic mission the pilot takes the medic chopper. Not sure how this would work. they don?t exactly have a hanger full of pilots ready and waiting.
==========

Austin residents can rest a little easier once Travis County?s new Star Flight helicopter arrives, outfitted specifically for fighting wildfires, an ever-present risk in the area?s hilly, forested terrain.

Funded by bond purchases, the $2.2 million helicopter is classified as Star Flight 4 but won?t be used for patient transport, only firefighting or disaster response, said Casey Ping, Travis County STAR Flight program director.

The aircraft, set to arrive around April 21, is a UH-1H or "Huey" that has been stripped down to its airframe and refurbished with tools, equipment and a water-carrying capacity that is nearly three times greater than the nonmodified models used to fight the 2011 Steiner Ranch wildfires, Ping said.

Currently, Star Flight helicopters can hold about 130 gallons of water and access a water source through a bucket hanging from its belly. Star Flight 4 will be able to hold up to 325 gallons of water which it can siphon through a hose, drawing the water into a container bolted to its undercarriage.

The hose method of drawing water is much safer for pilots, and the helicopter can get to places by air that ground crews can?t access, Ping said. The aircraft will be kept in a hangar in East Austin and will support any fire department in Travis County and neighboring areas if available.

Star Flight 4 was originally manufactured by Bell and retrofitted by Northwest Helicopters in Olympia, Wash. Although similar helicopters are used by California fire departments, Travis County is the first area in Texas to receive the specially equipped aircraft, Ping said.

Robert Abbott, Lake Travis Fire Rescue interim fire chief, said he is looking forward to having the new equipment as a firefighting option available to ESD No. 6.

?The helicopter is timely given our drought,? Abbott said. ?Having this as a resource going into the fire season will be a great, great tool. It

makes the logistics of getting water into the aircraft safer and more efficient since it?s specifically designed for that type of work. It will be a night-and-day difference with this aircraft.?

Don't see anything licensed for 155.8875 around there.
I would suspect something like the Texas Army National Guard around the airport, or possibly the Sheriff's Training Academy.

4234. San Antonio Riverwalk logs

Yahoo group: CenTexComm
Date: 2013-07-07 20:45:52 UTC
From: Eric C. Carlson
Topic: 4234 Message: 4234

Here are some logs from the San Antonio Riverwalk area. Confirmed finds are already updated on RadioReference.com.

Notable:
464.375 R [d 423] Centro San Antonio - Ambassadors/Maintenance (no license found)
462.825 S [CSQ] The Alamo - Voice Paging (used to activate the public address system)
466.35 M [71.9] The Alamo - Security (not using a repeater)
461.35 M [71.9] The Alamo - Operations (not used much)
415.7125 S [100.0] probably a hotel and probably intermod but this is worth further investigation
154.95 S [n 162] DPS dispatcher-only multicast?

Others:
469.2625 M [225.7] radio technicians talking about how San Antonio did it wrong and should have done P25 like Austin
464.6 R [d 115] hotel (no license found)
464.325 [d 031] hotel
154.515 M [67.0] hotel valet
467.85 M [d 165] movie theater?
467.85 M [d 546] valet
466.8375 M [d 054] hospital? "ultrasound"
457.025 M [162.2] valet

There was a ton of radio activity in the downtown Riverwalk area with almost every business using a radio but most very difficult to identify.

-Eric

And if they had gone P25 people would say they should have stayed analog...and I'm sure when they were Smartnet people said they should have stayed conventional. You just can't win.

Their is really nothing wrong with EDACS or ProVoice (other than not being scanner friendly).

Now OpenSky is a different subject. :-P

4241. OOPS: US marshals lost 2,200 encrypted radios

Yahoo group: CenTexComm
Date: 2013-07-23 11:52:10 UTC
From: Robert
Topic: 4241 Message: 4241

Subject: [austinhams] OOPS:US marshals lost 2,200 encrypted radios
Date: Tue, 23 Jul 2013 03:33:57 -0700 (PDT)
From: Jay Hoffman, KA5OST <jayhoffman@...>

http://rt.com/usa/marshal-lost-thousand-radios-434/

The US Marshals Service has lost 2,200 encrypted two-way radios and communication devices valued at $6 million or more, and officials are worried that the devices may have found their way into the hands of criminals.

Losing the devices could pose a security risk for federal judges and endangered witnesses, since criminals who may have obtained the radios could use them to listen in on security details and law-enforcement operations, Marshals officials told the Wall Street Journal.

The US Marshals Service (USMS) is responsible for the protection of court officers and buildings, including the Supreme Court. The service also runs the Witness Protection Program, which is designed to help witnesses and their families acquire new identities with authentic documentation, often to avoid being killed for testifying. The service also strives to apprehend fugitives. Marshals officials use radios to securely communicate in the field, but thousands of these devices remain unaccounted for.

Each radio ranges in price from about $2,000 to $5,000, bringing the total value of the 2,200 lost devices to about $6 million.

/“This issue is in large part attributable to poor record keeping as a result of an older property-management system, as opposed to equipment being lost,”/ USMS spokesman Drew Wade told the Journal.

The agency’s Office of Strategic Technology noted the problem in a 2011 presentation. In March of this year, the agency concluded a nationwide inventory of its equipment and discovered the missing items. Some unnamed officials told the Journal that the count of missing devices has since grown to at least 4,000.

/"It is apparent that negligence and incompetence has resulted in a grievous mismanagement of millions of dollars of USMS property,"/ stated the 2011 presentation. /"Simply put, the entire system is broken and drastic measures need to be taken to address the issues…The 800 pound elephant in the room needs to finally be acknowledged."/

The agency’s spokesperson claims that there are no instances where /“public safety was jeopardized as a result of this,"/ but the risk remains very real. One Marshals official told the Journal that one of the agency’s radios was sold a few years ago by an eBay user from Hong Kong. A Marshals Service official bought the device and upon examination, investigators noticed that it had been taken apart and reassembled.

Internal notes obtained by the Journal reveal that USMS officials have

long tried to downplay the significance of the missing devices and feared media exposure.
One note describes a phone call in which USMS Director Stacia Hylton tried to come up for a lower dollar value of the missing devices to make the $6 million loss appear less significant. Another note describes a conversation in which a senior official declares that he or she will not /“take the fall in the media for missing radios.”/ The author of the note replies, /“I am not taking the ‘fall’ for the agencies [sic] inability to take corrective action and ensure accountability for millions of dollars in missing radios.”/

4243. New radio system

Yahoo group: CenTexComm
Date: 2013-07-23 13:05:51 UTC
From: Wes Ogilvie
Topic: 4243 Message: 4243

I don't have any information yet as to frequencies or talk groups, but a new VHF P25 system is to go online in August for Burnet, Llano, and Blanco Counties. It will be linked via microwave to the GATRRS system. The documents I've seen so far refer to it as the "Western Counties" system.

Wes

Sent from a secure undisclosed location.

Thanks for the heads up. I look forward to hearing more about it.
Hopefully it won't be encrypted.

4247. Best Sources for Central Texas Wildfire Info

Yahoo group: CenTexComm
Date: 2013-08-03 22:14:53 UTC
From: Robert
Topic: 4247 Message: 4247

http://kutnews.org/post/best-sources-central-texas-wildfire-info

Wildfire season is in full swing. And due toTexas? ongoing drought <http://stateimpact.npr.org/texas/drought/>, the state remains at exceptional risk for wildfires.

Wildfires spring up quickly and spread unexpectedly ? making real-time information important. Twitter is an important resource for wildfire updates. And Facebook is an information clearinghouse for area residents in times of disaster.

KUT News has created a list of relevant Twitter feeds, Facebook pages and websites covering Central Texas wildfire news and emergency preparedness.

Twitter(Subscribe to our Texas Wildfires list <https://twitter.com/KUTNews/texas-wildfires-info/members>):

*National Weather Service Austin/San Antonio *@NWSSanAntonio <https://twitter.com/NWSSanAntonio>: National Weather Service office for Central Texas, including Austin, San Antonio and the Hill Country.

*Texas A&M Forest Service *@TXForestService <https://twitter.com/TXForestService>: Texas? premier forestry agency, featuring tools, information and updates regarding fires in Texas.

*Texas Parks and Wildlife News *@TPWDnews <https://twitter.com/TPWDnews>: Official news feed from the Texas Parks and Wildlife Department.

*Central Texas Red Cross *@CenTexRedCross <https://twitter.com/CenTexRedCross>: Official Red Cross chapter serving 48 Texas counties.

*Texas Storm Chasers *@TxStormChasers <https://twitter.com/TxStormChasers>: Regularly updated weather news from a group of meteorologists and storm chasers.

Texas Wildfires @Texas_wildfires <https://twitter.com/texas_wildfires>: Quick updates on current wildfires; includes links to articles with more information on Texas wildfires.

Austin Homeland Security and Emergency Management @AustinHSEM <https://twitter.com/AustinHSEM>: News and emergency notifications, via the City of Austin?s Office of Homeland Security and Emergency Management.

*Austin Fire Dept. *@AustinFireDept
<https://twitter.com/austinfiredept>: Austin area fire and other
emergency notices, updated frequently.

*Travis County Emergency Services *@TravisCountyES
<https://twitter.com/TravisCountyES>: Updates and photos on current
fires and other emergencies in Travis County.

*Bastrop County Office of Emergency Management *@BastropCntyOEM
<https://twitter.com/BastropCntyOEM>: Official twitter account of
Bastrop, Texas emergency management team.

*Bastrop County Emergency Services Dist. 1 *@BastropCntyESD1
<https://twitter.com/BastropCntyESD1>: Bastrop County fire, rescue and
first responder services.

*Guadalupe County Office of Emergency Management *@GuadalupeOEM
<https://twitter.com/GuadalupeOEM>: Twitter account of Dan Kinsey,
coordinator for the Guadalupe County OEM.

*Hays County Sheriffs Office *@HaysSheriff
<https://twitter.com/HaysSheriff>: San Marcos-based sheriff of Hays County.

Manchaca Fire-Rescue@ManchacaFire <https://twitter.com/ManchacaFire>:
Account for Manchaca-based ESD #5.

Some of you hams might try working the crossband repeater on this balloon.

Uplink on 446.000 and downlink on 147.435.

North of Ganado right now.

Now over 68,000 feet up.

-Myles

Subject: [HoustonScan] BLT-34 amateur radio helium balloon launch

Launching another helium balloon Saturday (8/10/13) from Wharton at 10am.

http://www.w5acm.net/b34.html

May try working the crossband repeater when it gets high enough.

1 watt can go a long way from 100,000 feet (19 miles).

Track it here: http://aprs.fi/#!mt=roadmap
<http://aprs.fi/#!mt=roadmap&z=11&call=a%2FW5ACM-9&timerange=10800&tail=10800> &z=11&call=a%2FW5ACM-9&timerange=10800&tail=10800

Currently showing an old flight from last year (BLT-31).

The City of Austin's Flood Early Warning System (FEWS) is testing out a new subscription-based notification service (via email, SMS/text, and phone) for flood warning. When a low water crossing closes, you can receive an email or SMS/text message with the details. In the event of creek flooding, we can also broadcast out email, SMS/text, and phone messages to nearby residents.

The system is currently in development and we are looking for beta testers! If you would like to help us test the site, please sign up here:

From: d_s_chapman
Topic: 4257 Message: 4257

Anyone in the group have an old RS Pro-43? My good old Pro-43 is giving me trouble for the first time in its life. All of the sudden; the scanner seems to be "eating" batteries. A standard set of 6 alkaline AA cells used to last forever. Now I'm going through a set every hour of use.

I noticed that the battery holder is cracking. I was wondering if anyone in the group has one of these units and can take a DMM voltage reading at the contacts of the battery pack. I just want to see what you get versus what I get (6 Vdc for my pack).

Any help would be appreciated. 73's!

AusK R OP06 sounds ACL related. They're talking about removing
someone's wristbands (assume they're being kicked out).

4262. spanish speaker

Yahoo group: CenTexComm
Date: 2013-10-18 03:16:31 UTC
From: Robert
Topic: 4262 Message: 4262

Heres one thing I really don't understand. A DPS trooper has a vehicle pulled over near 183 and Braker Ln.
He's asking for a Spanish speaker. The closest one they can find with DPS is at the Capitol.
He's requesting the Spanish officer check by. So now that officer from the Capitol has to come find him.

Why can't they use cell phones to call the Spanish trooper and find out what the deal is.
With all the talkgroups on the Trunked System why not just go to a talkgroup and let them talk back and forth
over the radio. And even with all the other users on the Trunked system, no common channel to sound out for an APD or Travis County officer that could also be close by.

And how easy will it be to get someone that has no idea what a radio is to talk to someone on the other end that is trying to explain to them how to talk on a radio? Think this true, it has to be a face to face discussion.

4265. Spanish Speaker

Yahoo group: CenTexComm
Date: 2013-10-18 13:06:53 UTC
From: <trebor1159@...>
Topic: 4262 Message: 4265

Yes I guess you could have someone who has never talked on a radio, and they may cuss or whatever, but at least they can quickly access what the guy wants to ask without having to wait 20 minutes for a 2nd trooper to come from downtown. The officer could even press the mic and let the guy talk into the radio with his questions. I'm not even sure how they handle it, if they pull over someone who only speaks spanish and they do not.

I just remember a few years ago when they first got the trunked radios, there was a camper who had flagged down a Travis Co Park Ranger but the camper only spoke Spanish and he got a Spanish speaker over the radio and they were able to do just that, talk back and forth by radio and he was just asking about the rules on having a campfire, So it can work.

4268. Sharing scanner alerts

Yahoo group: CenTexComm
Date: 2013-10-26 02:59:44 UTC
From: John Mayson
Topic: 4268 Message: 4268

All,

A few days ago I saw the house fire in my neighborhood. I posted it to this list. This got me thinking. I am using WhatsApp and BBM, both of which have group functions, at work and in my personal life. I'd like to set one up so active scanner listeners in the Austin area can quickly share tips.

Right now I'm gauging interest and trying to figure out the best way to do this. I think WhatsApp, BBM, or Google Hangouts are best as they're cross-platform.

Let me know your thoughts. Or if you have any other suggestions.

John

4284. Weather Update...940 am Friday morning

Yahoo group: CenTexComm
Date: 2013-12-06 15:50:12 UTC
From: Robert
Topic: 4284 Message: 4284
Attachments: 1 described; binary payloads are missing from this source WARC

DPS seems to have the most radio traffic. Tollway 45 from Lakeline to
La Frontera has 30+ cars and drivers trapped.
they can't go anywhere.
Downtown seems fine.

9:40 am update

...Light freezing rain/sleet over portions of the area this morning into early afternoon...possibly more later this weekend.

...*HEADLINE*...Winter Weather Advisories are in effect for...Bandera, Blanco, Burnet, Comal, Edwards, Gillespie, Hays, Kendall, Kerr, Llano, Real, Travis, Val Verde, and Williamson Counties. These advisories are in effect until 2 pm Friday afternoon.

...*AREA OF CONCERN*...Williamson, Burnet, Travis counties for the most part. Areas north of a line from Del Rio to Kerrville to Lexington remain at or just below freezing. South of this line, roads and bridges for the most part will remain wet with no ice.

...*IMPACTS*...Bridges, overpasses, elevated roads will see the main impacts with ice patches. Several of these have already been seeing impacts mainly in the Travis/Williamson County area, toll roads included. Elsewhere, most roads are just wet as the warm ground has kept them from freezing.

...*TIMING*...Radar shows more light precipitation over the I-35 corridor and the western Hill Country. Through 2 pm we expect this activity to move east and affect the northern half of South Central Texas. As temperatures warm just a few degrees over the next several hours, most of the icing issues will end...for now. The overnight hours later Saturday night into Sunday morning may also bring chances for more icy conditions on some road surfaces.

...*DISCUSSION*...Winter Weather Advisories will remain in effect through 2 pm for the counties listed above. If temperatures climb above freezing faster than expected then the advisories may end earlier. Cold arctic air remains in place and will stick around for several more days. One wave of precipitation is pushing through the Hill Country and the northern half of South Central Texas this morning. Icy conditions of elevated roads will be the main impacts. Have not received hardly any reports of normal roads being iced over...the warm ground is doing its job in keeping most of those clear. This will be the case for the rest of the day as temperatures start to warm just a few degrees and most of South Central Texas will climb above freezing by early afternoon

ending all threats for ice. Still could see some sleet showers and reports of sleet although the impacts will be minimal. The main area of concern for the remainder of the day will really be confined to Burnet, Williamson, Travis Counties where they have already seen some of the overpasses and elevated roadways like the toll roads get some icy conditions.

Much colder temperatures will start to move in tonight and Saturday...continuing through Sunday. Another round of light precipitation is forecast for Saturday night into early Sunday. With the subfreezing temperatures likely in place across much of South Central Texas at that time, we will have to revisit the possibilities of frozen precipitation later in the weekend and possible winter weather advisories. The good news is that the precip will likely be light and should keep impacts to a minimum. At least that is what it looks like right now.

We will update again on Friday afternoon after the afternoon forecast has been completed. The latest forecasts and watches/warnings/advisories from the Austin-San Antonio National Weather Service are at www.weather.gov/austin <http://www.weather.gov/austin>

Blanco, Burnet, and Llano counties are going to a new digital trunking system starting 02/04/2014. There are several repeater sites or towers in the region. The system will be called the Western Counties Regional Radio System. I found the sites and control channels listed on the GATERS listing on radio reference under Austin,Texas systems, but no talk group listings. Shows to be phase 1 Motorola.

He might. I googled "Burnet County communication systems" and my info is from an article from burnet paper in Jan. These never go on time so could've been delayed!!!

I progamed in the control channels listed on rr's webiste. There has been some action, but not much yet. The county officers went to a training session in Burnet on Monday. I think it had to do with the new radio system. They were chattering about how they couldn't wait to be on the new system. I'm trying to get with the ems director, as he has been the one using the new system the last couple of days. I'll post more as I find out.

4307. HomePatrol problem

Yahoo group: CenTexComm
Date: 2014-03-03 16:32:43 UTC
From: Maury Midlo
Topic: 4307 Message: 4307

Uniden does not reply to my customer service requests for help. My HomePatrol scans trunked channels but does not stop & pass audio. It does receive non-trunked signals (school buses, etc.). Any ideas for remedy will be much appreciated. (I do not have a PC to connect it to. Could be part of the problem, but it did work OK initially.)
Thanks, Maury

A new report finds first responders failed in several areas during last
year's Halloween floods.

Of nearly 300 findings, emergency managers found more than 60 percent of
the procedures need improvement or did not work at all.

Here are some interesting ones:

Shorter "stubby" antennas on some portable radios encountered limited
coverage issues.

Clarify to all City, County and Regional stakeholders that the AWACS
paging system is, and will remain,
the primary notification of EOC activations.

Austin Energy field crews were having issues with piggy backing on other
calls. Radio Communications
during the incident were having issues with the repeaters.

Radio transmissions from the rain gauge network were at times delayed up to
an hour, decreasing accuracy of FEWS flood forecast computer models.

Consider use of Austin/Travis County Amateur Radio Emergency Services
(ARES) for situational awareness. ARES has NEVER been requested by
the city for anything.

APD air support units unable to assist with rescues or evacuations
because they are not equipped for such
operations.

4320. Garbled audio in Austin

Yahoo group: CenTexComm
Date: 2014-05-18 14:32:04 UTC
From: banda@...
Topic: 4320 Message: 4320

Hello,

I haven't listened to my scanner in a while, and when I did recently I found that the audio from Greater Austin/Travis Regional Radio System (GATRRS) is garbled about 75% of the time. It's not encryption, just partially garbled conversations. Has there been some change to the system that could cause this, or is my scanner (Pro 96) flaking out?

Brent

4321. [CenTexComm] Garbled audio in Austin try different antenna or reposition the radio

Yahoo group: CenTexComm

From: Robert
Topic: 4320 Message: 4321

Brent, It may be your scanner, what antenna are you using on your pro-96? I have several Pro-96s and I mostly hear the system fine and the rubber antenna that says 800 Mhz on the side that Radio Shack sells works very good for it. Also try moving the radio around to different spots. The system is not perfect I do occasionally get garbled transmissions but that's is rare.

Topic: 4320 Message: 4323

Custom tables are not required. I do control channel trunking so all
you need is the control channel.
make sure you are scanning simulcast 1 in one bank and simulcast 2 in
another bank.
and any of the other intellirepeaters in any other bank.

4324. Starflight Open House and firmware update

Yahoo group: CenTexComm
Date: 2014-05-22 15:10:55 UTC
From: <trebor1159@...>
Topic: 4324 Message: 4324

Today STAR Flight is hosting an Open House from 3-7:00 pm at its hangar at 7800 Old Manor Road, Austin, TX 78724. Everyone is invited!

The EC-145 helicopters and our new firefighting Huey helicopter, SF4, will be on display, along with rescue and firefighting equipment. Visitors will have the opportunity to get in the helicopters, talk to flight crews and watch helicopter demos, including patient rescues and water drops. The hangar is located at 7800 Old Manor Road.

https://starflight.traviscountytx.gov/news-media/62-public-open-house

---
Also if you use the Home Patrol -1 (the original one), they just put out a firmware update so be sure to sync up online and get the new update long with frequency data base update that is available every Monday night. This stuff changes so fast, it's important to keep your radios up to date.

I tried a different antenna but that did not help. Do you have AGC turned on or off? Also, I noticed custom tables listed on the Radio Reference Wiki page. Would it help to enter these?

You do not need Custom tables. I am not sure about the AGC but i think it would be on. Moving a foot should change the reception and make it better.

Ok, I used Win96 to load only 851.4125 to the scanner. I then noticed that other frequencies listed in black on this site http://www.radioreference.com/apps/db/?sid=2 http://www.radioreference.com/apps/db/?sid=2 are showing up as it scans as well. I initiated the scanner to erase these, reloaded with Win96, but they still show up. Is this normal? I also loaded the Davis and Creedmoor repeaters in other banks and they work fine, but there is very little traffic on them.

4336. Win 96 Settings

Yahoo group: CenTexComm
Date: 2014-06-15 00:42:07 UTC
From: Robert
Topic: 4320 Message: 4336

on the Pro-96 when it's searching it will say Scan up... or Scan Down
... (will not show frequencies)

The frequencies only appear when someone is talking and yes it will show
the actual frequency
they are talking on. and the bottom line will show the talkgroup.

on the Win 96 across the top where it says Bank 1 Tag Simulcast
closed Type MOT
make sure the closed box is unchecked and the type says MOT
then where the frequency is listed
851.4125 MOT <- is the RX mode
so if you want to monitor Simulcast 2 you'll have to put that on in a
separate bank
because the scanner will only go to the first control channel in each
bank and then go to the next bank.
I can send you my win 96 file if you want to load it up.

I think my settings are as you describe, but the audio is still garbled. I'm thinking it might be because of those other frequencies showing up, but I can't seem to get rid of them. Re-initializing didn't work, and reloading with Win 96 didn't work. But if you send your file to me I'll try that. Thanks.

Even if you do not live in an HOA, your support for this petition will help those of us who are stuck in one. - Glenn

https://www.change.org/petitions/u-s-house-of-representatives-co-sponsor-hr-4969-the-amateur-radio-parity-act-of-2014

HR.4969 would require the FCC, within 120 days of the Bill's passage, to amend the Part 97 Amateur Service rules to apply PRB-1 coverage to include homeowners' association regulations and deed restrictions, often referred to as "covenants, conditions, and restrictions" (CC&Rs). PRB-1 states that local governments cannot preclude Amateur Radio communications; they must "reasonably accommodate" amateur operations, and the state and local regulations must be the minimum practicable regulation to accomplish a legitimate governmental interest.

Presently, PRB-1 only applies to state and local zoning laws and ordinances. Since PRB-1 was enacted, the FCC has said several times that it would prefer to have some guidance from Congress before extending the policy to private land-use regulations. HR.4969 will provide that guidance, and give PRB-1 the force of Federal law.

Radio amateurs, while providing a valuable and necessary service to their communities, are frequently and increasingly precluded from installing necessary equipment (antennas, coax, etc) by unreasonable private land-use restrictions, including restrictive CC&R covenants. The net effect of HR.4969 passage will be to suppress those unreasonable restrictions and allow licensed amateurs to install reasonable equipment for practicing our hobby and having the means to serve our communities

4350. 173.700 scrambled and 700 Mhz traffic downtown

Yahoo group: CenTexComm
Date: 2014-08-29 13:40:08 UTC
From: Robert
Topic: 4350 Message: 4350

I'm getting all scrambled traffic on 173.700 any ideas as to who this might be?

I'm trying to update some of the federal stuff here in town.

Also I got the new BCD436T and you can do Discovery mode on a site, so yesterday at work I set it lose on the 700 Mhz Central Austin Site. It's grabbing a few of the APD talkgroups like 1012 and 1041 (APD Talk 12) I never understood what the "talk" labels were for. Wondering if that means they are using 700 Mhz radios or why they would be on the 700 Mhz towers. Also It captured talkgroup 40004 and even recorded them talking about opening a (garage type) roll door. This could be DPS Executive Security or something at the State Capitol. Again this was all on 700 Mhz, and so far, all of that has been state related stuff. (not city or county) Seems like units were 9000 series

Trying to figure out the different DPS talkgroups
3522 is regular troopers running license checks
3525 is also DPS but it may be only for Capitol DPS running license checks

Thanks for the update.

DPS is on the Austin TRS and also still uses their VHF frequencies. Is this a simulcast? On the TRS the dispatcher says "KKD303" which isn't the call sign for the TRS. :-)

Back with POTUS was in town I noted the airport police talkgroups were encrypted. The encryption has since been turned off.

4353. DPS Talkgroups

Yahoo group: CenTexComm
Date: 2014-08-30 20:46:29 UTC
From: Robert
Topic: 4350 Message: 4353

DPS is on the Austin TRS and also still uses their VHF frequencies. I don't know who is on what. Like why some are on one and not the other. I don't listen enough to try to map it out. I suspect they use whatever works best or what they are used to. I was really just trying to identify who is on the 700 Mhz tower using 700 Mhz radios.

I don't think DPS are simulcasting the VHF and the Talkgroups but they do use both.

The DPS dispatcher says "KKD303" which isn't the call sign for the TRS. :-) DPS has used this Call sign for years and even on the TRS it's all they know.
It's how they acknowledge a transmission by giving the callsign.

Bill asked about the encryption on 173.300, I really don't know that much about encryption, just to say it was scrambled. I have heard this is most likely DEA but unusual since DEA has been on active on UHF 409.95

4354. Fire down a cliff STARflight will not help

Yahoo group: CenTexComm
Date: 2014-09-01 01:31:59 UTC
From: Robert Barker
Topic: 4354 Message: 4354

AFD currently working or looking at a fire behind an apartment complex 1000 ft down a cliff. so they need that much hose and more to get to it.

STARflight flying in circles above but said they cannot do water drops at night (and we paid how much for this firefighting helicopter???)

but they can pick up a fireman to oversee the fire from above. but they don't have a commander on the scene so they are asking STARflight to just keep flying around in circles until someone of authority arrives. Interesting.

From: Robert
Topic: 4357 Message: 4357

Monitoring radio traffic searching for the lost Travis County Deputy. Half the units searching cannot talk to the other half. different radios not compatible. Also there doesn't seem to be a common talkgroup for the units that are on the system. Travis County talking on their Adam talkgroup and others on a Regional Interop talkgroup. They cannot coordinate their efforts. They are trying to have a briefing and only have of the search party is there since the others can't be reached. all that money spent for fancy radios and they still cannot coordinate. Yesterday they had 3 helos in the search too. It's amazing they haven't hit each other yet.

4363. [f1scanner] F1 Frequencies for COTA

Yahoo group: CenTexComm
Date: 2014-10-15 00:01:59 UTC
From: Robert
Topic: 4363 Message: 4363

So with F1 at COTA just a few weeks away, there will no doubt be folks asking about scanner frequencies for the F1 teams. The main message is be prepared to be very disappointed as very little is still in analogue.

Please also note that the quoted frequencies below are likely to be about right, but unlikely to be exactly those used at COTA. Use them as a guide. They change from race to race: you'll need to search up or down a bit.

Toro Rosso
Car to Pit Channels are Nexedge 9600 Digital
VERGNE 165.150 & 155.100
KVYAT 164.025 & 158.600

The Pit channels are analogue (the DCS tones are the give away and won't change between events):
PIT 25 164.775 & 158.375 DCS223
PIT 26 164.5625 & 158.275 DCS503
PIT 167.450 DCS754
PIT 152.150 DCS025

McLaren:
All comms are Encrypted Nexedge 9600 Digital
BUTTON 152.225 & 447.475
PIT 461.825
MAGNUSSEN 147.950 & 462.600
PIT 450.225
PIT 457.400
McLaren Marketing 155.100 DCS023 (yes they have used the same freq as Toro Rosso)

All other teams are TETRA Digital: Base 420-430Mhz and Mobile 410-420MHz, with 10Mhz split

There was some discussion earlier this year about how the quality of the 'Team Radio' broadcast on TV has now significantly improved, and if this meant new in-car radios. Last year we heard the Sauber comms had moved to this 'new system'.

I now understand that the teams have not installed new radios in the cars, but that FOM now take a feed from the drivers microphone direct to a sound channel associated with the on-board TV camera transmitters (think of it as another microphone, permanently on, just the one that picks up the on-board engine sounds for the cameras).

This is only implemented on some cars so far: Sauber (2013+), Red Bull (2014), Lotus (2014), Mercedes (from Monaco 2014), and most recently

Toro Rosso. It is actually the latter - Toro Rosso - that provides the most compelling evidence, as the quality of what you hear on TV is substantially better than what the Toro Rosso team hear on their Nexedge radios. Essentially this means that what you hear on TV isn't what the teams hear - the sound quality of what the teams on the pitwall hear really is much worse, and more like the poor quality of what gets broadcast as 'Team Radio' for Ferrari, Williams, Force India, Caterham, Marussia etc. Put simply TETRA doesn't work very well in this environment. This also goes to explain why sometimes you hear overlap between the race engineer talking and the driver talking on the 'team radio' broadcast, and this wouldn't happen on the actual radio system.

HTH

4365. AUDIO: Austin, TX Active Shooter And Officer Involved Shooting

Yahoo group: CenTexComm
Date: 2014-11-29 02:26:37 UTC
From: Robert
Topic: 4365 Message: 4365

Here is scanner audio from the Shootout this morning.
http://www.mnpoliceclips.com/audio-austin-tx-active-shooter-and-officer-involved-shooting.html

It was clear that he was using an automatic weapon. APD hasn't really talked about that or securing the weapon or what kind of weapon it was and where he might have gotten it or what else was found in his apartment. It is pretty incredible that the Mounted Patrol officer who was loading horses in a trailer in front of the station at the time, was able to shoot the suspect with one hand while holding the reins of 2 horseswith the other hand. He is definitely a hero for what he did knowing the guy had an automatic weapon. This is one of the first times Austin has had anyone with an automatic weapon actively shooting. The suspect could have easily killed thousand of people downtown at the time as bars were letting out. APD said he did not have a driver's license but he was driving a white Toyota Highlander. Hopefully we will find out a lot more in coming days. I'm worried that our police are out gunned.

Interesting. I once saw DPS troopers wearing jackets that said "STATE POLICE" also (the uniform in this article has such a patch). Yet as far as I know Texas doesn't have an actual agency called that. It's just a description I suppose.

I work for the State Comptroller's office and our Enforcement People
wear Jackets (raid jackets) that say: State Police,
I've also seen that logo worn by TABC and now Parks & Wildlife.

It's probably more descriptive and recognized than the actual agency name.
